D.	Table of Railway Carriage Rates from Liverpool, as compared with other Places. (*Referred to by Mr. Halhead in his Answer to Question* 426.)	8
E.	Memorial of Birmingham Corn Merchants	8
F.	Proposal of Judge Longfield on the subject of Railway Reform	9
G.	Letters from Mr. William Oxlade of York. (*Alluded to in his Answer to Question* 1919.)	10
H.	Letter and Enclosure sent by the Commission to various Chambers of Commerce and other Public Bodies in the United Kingdom	11
K.	Memorial from the Liverpool Chamber of Commerce, addressed to the Right Hon. the President of the Board of Trade, and referred to this Commission	12
L.	Resolution of the Association of Chambers of Commerce of the United Kingdom	14
M.	Memoranda on Belgian Railways. (*Communicated by one of the Commissioners, and referred to by M. Fassiaux in Answer to Question* 3059.)	14
N.	Statement laid before the Chamber of Representatives at Brussels, on the 7th March 1865, concerning the Tariff of Passengers and Luggage on the Railways of the State	17
O.	Statement of Lord Ashtown's agent	19
P.	(Irish Inquiry.) Copy of a Letter from the Chancellor of the Exchequer to the President of this Commission	20
Q.	Statement by the Rev. James Field as to Want of Correspondence of Trains on different Lines in the Midland Counties	21
R.	Statement of Mr. G. W. Shannon as to Obstructive Policy followed by Directors of Irish Railways	23
S.	Statement of Mr. John Bullar as to Want of Railway Accommodation at Putney	24
T.	Statement from the Superintendent of the Birkenhead Docks as to the Practice of Railway Companies giving Warehouse Room free of Rent	24
U.	Report of the Committee of the Chamber of Commerce of the City of Waterford.—Working of the Railways to and from Waterford	24
X.	Statement of Messrs. James and Frederick Howard, Britannia Iron Works, Bedford, as to Irregularities of Fares and other Railway Grievances	25
Y.	Statement of Mr. John Miley in regard to the Emission of Smoke from Locomotives	27
Z.	Memorandum upon Railway Fares from Mr. John Patterson, of Liverpool	27
AA.	Extracts from Returns to the Board of Trade for the year 1863, relative to Irish Railways	28
AB.	Table showing various Statistics for the Principal Railways open in Ireland	41
AC.	Supplemental Report of the Committee of the Chamber of Commerce of the City of Waterford on the present Workings of the Railways to and from Waterford	48
AD.	Statement of Mr. John Bullar as to Through Booking	48
AE.	Memoranda on Foreign Railways, by Mr. W. K. Sullivan. (*Referred to under Question* 2114.)	48
AF.	Communication from the Lord Mayor of Dublin	50
AG.	Abstracts from the Half-yearly Reports of the Midland Great Western Railway, from July 1851 to June 1864. (*Given in by the Earl of Clancarty, Question* 6319.)	52
AH.	Statement of Traffic on the Great Southern and Western Railway (Ireland). (*Alluded to by Mr. Haughton in his Answer to Question* 4493.)	54
AJ.	List of Irish Railway Companies incorporated previously to 1855, who obtained Powers to make new Railways, and to raise Capital for Construction of the same in 1855 and subsequent years; the Length of such Lines and Capital authorized, together with the Length of such Lines opened for Traffic at 31st December 1864	55
AK.	List of Irish Railways incorporated in 1855 and in each succeeding Year, showing the Length of Railway and Capital authorized in each Year; the Length open at 31st December 1864, and Capital raised on same date	56
AL.	Port and Trade of Waterford. (*Referred to by Mr. Delahunty in his Answer to Question* 5036.)	57
AM.	Irish Railway Reform Movement. Statement as submitted by the Rt. Hon. the Lord Mayor of Dublin to the Royal Commissioners on Railways, showing Cause of Complaints on Irish Lines. (*Referred to by Mr. Barrington in his Answer to Question* 7123.)	59
AN.	Comparative Charges for Through Goods Traffic between England and Ireland. (*Referred to by Mr. Barrington in his Answer to Question* 7147.)	60
AO.	Statement from the Public Works Loan Board of Loans advanced by Government to Irish Railways, made up to 26th May 1865	61
AP.	Letter from Irish North-western Railway Company	64
AQ.	Statistics affecting the Value of certain Railways in Ireland	65
AR.	Irish Railways.—Statement of Loans and Interest thereon	66
AS.	Official Collection of Tariffs for the Transport of Goods, Finances, Equipages, Horses, and Cattle, on the State Railways of Belgium, 1 July 1864.—(*Translated for the Commission.*)	69
AT.	Offer from the Waterford and Limerick Railway to reduce their Fares on certain Conditions	77
AV.	Memorial from Scariff, as to Boats on the Shannon	77
AW.	Abstract of Returns on various Matters from Irish Railways	78
AX.	Extracts of Evidence sent to Companies, and Replies received	90
AY.	Letter from Mr. Dargan on Irish Railways	126
AZ.	Table showing Want of Success of Irish Railways as Commercial Speculations. (*Alluded to in the Evidence of Dr. Hancock; Question No.* 7597.)	127
BA.	Returns received from the Post Office, as to the Service rendered to that Department by the Railways of the United Kingdom	128
BB.	Londonderry and Coleraine Railway.—Returns of Fares, Traffic Receipts, &c. (*Referred to in the Evidence of Mr. E. J. Cotton; Question No.* 7787.)	160
BC.	Explanation from Mr. Fishbourne	162
BD.	Letter from Mr. Henry Oldham of Dublin, in respect to the Through Charges for Passengers between England and Ireland	162
BE.	Mr. Roe's Remarks in reply to Mr. Cotton's Evidence before Royal Commission	163

App.		Page
BF.	Memorial from the Chamber of Commerce, Wolverhampton	164
BG.	Statement of Irish Railways, classified according to the Dividends paid	165
BH.	Abstracts of Returns from Irish Railways on Charges for Goods Traffic	166
BI.	Comparative Statement of the Great Northern Grain Rates to Lincoln.—(*Appendix to Mr. Gentel's Evidence.*)	177
BK.	On an Official Inspection of Railways, and the Management of the Traffic thereon as a means of preventing Accident and Loss.—By Edwin Hill, of the Inland Revenue	178
BL.	Memorandum on the Coal Trade of Ireland.—By William K. Sullivan, Ph. D., Professor of Chemistry to the Industrial Museum of Ireland	179
BM.	Letter from the Board of Trade as to the power of Parliament to revise Railway Rates and Tolls	183
BN.	Statement of Cannock Chase Colliery Company's waggons which have been delayed. (*Referred to by Mr. Brown in answer to Question* 11,124)	184
BO.	Supplementary Memorandum respecting some points in Mr. E. J. Gibbs's Evidence	189
BP.	Statement by the Grand Canal Company of Ireland	189
BQ.	Letter from Lord Mayor of Dublin, enclosing Resolution on Irish Railway Reform	190
BR.	Memorial from Irvinestown, and remarks thereon by Irish North-western Railway	191
BS.	Memorial from Mr. H. M. D'Arcy Irvine, as to the Enniskillen, Bundoran, and Sligo Railway	192
BT.	Remarks by Mr. C. Clark, of Liverpool, on Mr. Cawkwell's Evidence	194
BV.	Observations by the Proprietors of Wingerworth Colliery on the Railway Companies' working of Coal Traffic	195
BW.	Further Statement from Wingerworth Colliery in reply to Mr. Allport's Evidence	195
BX.	Statement by Mr. Milton, of the War Office, as to the payment to Railway Companies for the Conveyance of Troops	197
BY.	Statement in reference to Excursion Trains in Ireland	199
BZ.	Statement from Irish Railway Clearing House on the subject of sea risks between Great Britain and Ireland	200
CA.	Rules drawn up by the Congress of German Railway Engineers held at Berlin in February 1850, and revised and amplified at the Congress of German Railway Engineers held at Vienna in May 1857, for regulating the Construction and Working of and the Conveyance upon the Railways in Austria, Prussia, and the German States according to uniform principles	202
CB.	Regulations for the working of Prussian State Railways	209
CC.	Communications from Mr. Peter Roe on the result of lowering Fares on the Newry, Warrenpoint, and Rostrevor Railway	218
CD.	Great Western Railway.—Diagram showing comparative Weekly Receipts. *Handed in with Mr. Grierson's Evidence.* (See Question No. 13,475)	to face page 218
CE.	Diagram showing the comparative Weekly Receipts on all Railways in the United Kingdom for the Year ending December 1864. *Handed in with Mr. Grierson's Evidence.* (See Question No. 13,485)	
CF.	Diagram showing the Number of Passengers booked out of Paddington Station each day during 1865. *Handed in with Mr. Grierson's Evidence.* (See Question No. 13,485)	
CG.	Diagram showing the Weight of Excess Luggage at Paddington Station each day during 1865. *Handed in with Mr. Grierson's Evidence.* (See Question No. 13,485)	
CH.	Regulations for the Transport of Passengers and Goods on the French Railways	219
CJ.	Plan of First-class Carriage in use on Russian Railways. (*Alluded to by Mr. Hawkshaw in his answer to Question No.* 14,629.)	*to face page* 226
CK.	Information as to the Obligations and Conditions of Transport of Railways in France	227
CL.	Copy of Contract for Working the North Staffordshire Railway. (*Mentioned by Mr. G. P. Bidder in his Answer to Question* 16,794)	233
CM.	Further Observations by the Wingerworth Coal Company in reply to Mr. Allport's additional Evidence	236
CN.	English and Continental Railways.—Comparison of the Rates charged for Passengers, Goods, Passengers' Luggage; Speed of Trains; Number of Passengers carried; Receipts per Mile; Dividends, &c., &c.	237
CO.	Statement from the Board of Trade on Railway Charges for Conveying Rockets for Saving Life from Shipwreck	241
CP.	Railway Clearing House.—January 1865.—General Classification of Goods by Merchandise Trains upon Railways	241
CQ.	The Memorial of the undersigned Merchants, Brokers, Sugar Refiners, Wholesale Grocers, and others interested in the Commerce of London, to the Chairman and Directors of Railway Companies connected with the Metropolis	249
CR.	Letter from the Board of Trade on the subject of Terminal Charges. 25 May 1866	254
CS.	Irish Railways. — Debenture Loans Outstanding, December 1864 (including Government Loans)	257
CT.	Conditions and Fares for the Transport of Passengers on the State Railways of Belgium. (*Translated, for the Commission, from the Official Documents issued by the Belgian Government.*)	258
CV.	List of Arbitrations between the Post Office and Railway Companies, showing the date of each Award, the name of the Arbitrators for the Post Office and the Railway Company respectively, and the name of the Umpire, if an Umpire has been appealed to	264

Appendix B*.

(*Referred to by Mr. Charles Clark in his Answer to Question* 82.)

Extracts from Act 8 & 9 Victoria, Cap. 198, entitled "An Act for consolidating the Bolton and Leigh, "the Kenyon and Leigh Junction, the Liverpool and Manchester, and the Grand Junction Railway "Companies." (8th August 1845.)

Preamble.

Provided also, that nothing herein contained shall extend in any way to defeat, affect, or prejudice any rights, privileges, liberties, powers, easements, accommodations, or exemptions which under or by virtue of the said hereby repealed Acts or any of them are given, granted, continued, or reserved to or for the benefit of any persons or corporations whose estates, properties, or interests are, have been, or may be in anywise affected in or by the making or maintaining or otherwise on account of the railways, branches, and works by the same Acts respectively authorized to be made and maintained, or to which such persons or corporations are or may be, or but for the repeal of the said hereby repealed Acts would have been, otherwise entitled under or by virtue of the same Acts or any of them, but all such rights, privileges, liberties, powers, easements, accommodations, and exemptions shall be and they are hereby declared to be as valid and effectual as if the said hereby repealed Acts were not repealed; and such several persons and corporations shall be entitled to, and shall have, use, and enjoy the same rights, privileges, liberties, powers, easements, accommodations, and exemptions, or such and so many of them as immediately before the passing of this Act they were entitled to have, use, and enjoy as fully and effectually as if the said hereby repealed Acts had not been repealed, and shall and may have and be entitled to such or the like powers or remedies upon and against the Grand Junction Railway Company, for securing the possession, use, and enjoyment of such rights, privileges, liberties, easements, accommodations, and exemptions, as under the provisions of the said hereby repealed Acts they had or were or might have been entitled to against the said dissolved companies or any of them in case the said hereby repealed Acts had not been repealed; and all such penalties, damages, monies, costs, and expenses as, under the provisions of the said hereby repealed Acts or any of them, would or hereafter might have become payable to or recoverable by such persons or corporations as aforesaid of and from the said hereby dissolved companies or any of them in case the said Acts had not been repealed shall and may be payable by and recoverable from the Grand Junction Railway Company, in such manner and by such ways and means on the same are respectively made payable and recoverable under the provisions of the said hereby repealed Acts or any of them: Provided also, that nothing herein contained shall extend to affect or prejudice in any respect the rights of owners and occupiers of lands, mines, and minerals and other works, in and to any private branch railways, or other communications with the said Liverpool and Manchester, Bolton and Leigh, and Kenyon and Leigh Junction Railways, or any of them, whether made in pursuance of the powers and provisions contained in the said several hereby repealed Acts or any of them, or with the consent of owners and occupiers of lands, but that such several owners and occupiers of lands, mines, and minerals shall have, use, and enjoy the same rights and privileges in respect of such private branch railways and communications as immediately before the passing of this Act they respectively were entitled to have, use, or enjoy under or by virtue of the said hereby repealed Acts or any of them, and as fully and effectually in all respects as if the same had not been hereby repealed.

Clause Ten.

And with respect to the rates, tolls, and duties to be levied by the company in respect of the railways, branches, and works hereby vested in or authorized to be made and maintained by them, be it enacted, that the rates, tolls, and duties imposed by the said recited Acts under the provisions of which the Grand Junction Railway is herein-before mentioned to have been made, or any of them, shall not by reference be payable in respect of the railways, branches, and works hereby vested in or authorized to be made by the company, anything in this Act contained to the contrary in anywise notwithstanding; and that it shall be lawful for the company, to demand, take, recover, and receive for the use of the several railways, branches, and works hereby vested in or authorized to be made by the company, or any part or parts thereof, and for the drawing, propelling, and conveyance of goods, articles, matters, or things, passengers, cattle, or animals, upon the same railways or any part or parts thereof, the rates, tolls, and duties following; (that is to say,) in respect of the railways, branches, and works which immediately before the passing of this Act belonged, or if made would have belonged, to the Liverpool and Manchester Railway Company, the same rates, tolls, and duties as were authorized to be taken by the said recited Acts under or by virtue of which the Liverpool and Manchester Railway is herein-before mentioned to have been made; in respect of the railways, branches, and works which immediately before the passing of this Act belonged, or if made would have belonged, to the Bolton and Leigh Railway Company, and in respect of the Kenyon and Leigh Junction Railway, the same rates, tolls, and duties as were authorized to be taken by the said recited Acts under or by virtue of which the Bolton and Leigh Railway is herein-before mentioned to have been made; provided always, that the Company shall have such powers of altering the tolls and charges upon the whole or any particular portions of the Railways by this Act amalgamated as are given to companies under or by virtue of the Railways Clauses Consolidation Act, 1845.

APPENDIX C.

STATEMENT.

(Referred to by Mr. John Patterson in his Answer to Question 222.)

ASSOCIATION OF THE LIVERPOOL CORN TRADE.

IMPORTS and EXPORTS of BREADSTUFFS, and STOCKS held in LIVERPOOL, 1858, 1859, 1860, 1861, 1862, 1863, and 1864.

	„ 1864	618,026	8,150	2,266	26,546	4,912	4,332	—	169,766	—	47,305	106,746	128,169	208,000

The above figures indicate that the corn trade, which, in 1860, was the largest trade in Liverpool, had, in 1861 and 1862, increased 50 per cent., and its contribution to dock revenue, which was about equal to 90,000*l.* in 1860, amounted in 1862 to about 150,000*l.*; and for the four years ending 31st December 1864, it will be found the largest trade in Liverpool in tons weight, and also as regards the income of the port. It is now, however, exposed to much greater competition from the rapidly extending system of directing cargoes of grain to ports of call for orders to discharge at any safe port in the United Kingdom.

In February 1864 a table of rates charged for grain upon railways and by canal from Liverpool to places in the interior, and also from other ports, was prepared by the Association of the Liverpool Corn Trade. Since then no substantial change has been made, but as it has been revised by the goods manager of the London and North-western Railway, it is now re-issued in a similar form, with the emendations so made. It has since transpired that not only are "through rates" arranged from continental and other ports, by which important reductions from the printed rates are allowed (especially upon French flour at Goole, &c.), but by an extension of this system to the Irish traffic, goods are even carried through Liverpool at a cheaper rate than is available to the Liverpool trader; thus, in some measure, redressing the injustice to carriers to Liverpool, but increasing such to the Liverpool factor. It is submitted that it the carriage to Manchester was 5*s.* per ton instead of 8*s.* 4*d.*, arrangements for a preferential bonus of 2*s.* 6*d.* o 3*s.* 6*d.*, as at present, would not be so readily made. It s further to be borne in mind, that the railways carrying from Goole, Hartlepool, Fleetwood, &c., not only charge lower rates, but load goods direct from ship, and so obviate cartage and porterage. Apart, however, from these private and somewhat obscure arrangements, the avowed charges disclose many inequalities. For example,—

				s.	d.	
Fleetwood	to Manchester	-	50 miles -	7	4	per ton.
Liverpool	to „	-	32 „ -	8	4*	„
London	to Birmingham	-	111 „ -	11	4†	„

„	to Burton-on-Trent		87 „ -	15	0	„
Gloucester	to „		88 „ -	7	1	„

The result of inquiries induced the belief that the cost of terminal charges at Liverpool and Manchester, which was greatly insisted upon by present carriers, was much exaggerated, and an opportunity having presented itself upon the examination of Captain Huish before a Committee of the House of Commons, the estimate of the corn trade of 2*s.* per ton for terminals was pronounced by him to be "ample," it is again presented as the basis of a table, graduated to distance as follows (terminals, 2*s.*, being a constant quantity).

* See note upon next page.

Hull - - -	Do. - - -	135	13 4	1		11 10

So much of this statement as is included between braces has been submitted by me to the revision of Mr. Mason, of the London and North-western Railway Company, and has received his corrections.—J. PATTERSON.

* The rate was originally printed 15*s.*, but, following Mr. Mason's correction, was altered to 12*s.* 6*d.*, but a Sheffield corn dealer having complained of 15*s.* as a rate excluding that town from Liverpool, it has been ascertained that 15*s.* is actually charged.—J.P.

NOTE.—From Liverpool all goods are charged upon exact weight; from east coast ports weight is in many cases computed from measure to the advantage of the owner of goods 5 to 15 per cent.

The London and North-western Railway Company have intimated a reduction from this date upon grain to Manchester, if removed immediately, of 1*s.* 8*d.* per ton, say = 6*s.* 8*d.*

Liverpool, January 2, 1865.

Appendix E.

Memorial of Birmingham Corn Merchants.

To the Royal Commissioners on Railways, &c., House of Lords, S.W.

The undersigned persons, being largely interested in the corn and grain trade, venture to call attention to the importance of low rates of carriage for grain between the various seaports and the inland districts.

They find in this district great inequality in the charges, and in some cases the rates are so high as to be almost prohibitive. By a recent combination of the railways and canals, the greater part of the grain carried to Birmingham has been charged at an increase of 15 per cent., and has seriously interfered with the trade.

Parliament having given a practical monopoly to Railway Companies, it is extremely desirable that a periodical revision of rates should take place, and thus ensure reductions proportionate to the increase of traffic.

Appendix F.

Proposal of Judge Longfield on the Subject of Railway Reform.

(Referred to in his Answers to Questions 2932–5, 2936.)

The following plan is proposed as fitted to carry out the wishes of the public without injustice to the proprietors of railway shares. Let an experiment be tried on any great network of railways, for instance, on the great lines which connect the south of Ireland and the cities of Cork, Limerick, and Waterford with Dublin. Those lines belong to two companies, viz., The Great Southern and Western, and the Waterford and Limerick Railway Companies. Let the State guarantee to those companies for 10 years the profit which they are likely to make under the present system, say 4½ per cent. for the Great Southern and Western, and 1 per cent. for the Waterford and Limerick Company.

In return for this, the Government is to have the right to appoint one director on each board, who is to be called the Official Director. He is to have the right to sit and vote on every board and committee, to inspect all the books and accounts, and to receive such information as he requires from all the officers of the company.

After consultation with the board of directors and the chief officers of the company, the official director is to have the absolute right to settle the tariff of fares to be charged for passengers and goods, and the times, and number, and speed of trains. The profits are to be applied, in the first place, to indemnify the State against the dividend which it guarantees to the railway proprietors, and if there should be any surplus, one half ought to be paid into the Consolidated Fund, and the other half distributed as dividend among the shareholders. If the increased accommodations provided for the public under this arrangement should create the necessity of building new stations, engines, or carriages, or of incurring any other expense that ought to be charged to the capital account of the company, the Treasury is to have the power of making the advances necessary for the purpose, and to receive interest on such advances at the rate of 4 per cent., before any of the profits beyond the guaranteed dividend shall be distributed among the shareholders. At the expiration of the 10 years of the guarantee it shall be left to the Board of Trade to determine what proportion of such advances shall be repaid by the company, and the certificate of the Board shall be sufficient authority to the company to increase its capital accordingly by the issue of new shares or bonds. If the official director shall be of opinion that there is anything in the expenditure of the company, or in its mode of keeping its accounts injurious to the interests of the public, or tending to reduce its profits and increase the burden of the guarantee, the question is to be left to the decision of the Board of Trade. The advantages of the proposed arrangement are, 1st, That it does not add materially to the patronage of the Government. No new office is to be created except that of official director, to which of course a competent salary must be attached. 2nd. The interests of the travelling and commercial public are protected, since the official director will have the power of ordering as much accommodation, and fixing as low a rate of charge as the Government may from time to time think proper to direct. 3rd. No injustice is done to the railway companies on whose lines the experiment is to be made, as they are guaranteed against any loss which might arise from the experiment. 4th. As the official director will necessarily acquire an intimate knowledge of all the details of railway management, and its receipts and expenses, he can order such reduction of fares and alteration of trains as will produce a benefit to the public far exceeding the expense which the guarantee will impose on the State.

It may be objected that this plan is a partial one, calculated to confer a benefit only on those parts of Ireland through which the railways flow that are the subject of the experiment. This is undoubtedly true to some extent, but it is not an essential part of the plan that the experiment should be confined to one network of railways. On the contrary, there is no difficulty in extending it to every railway in Ireland, although if the Government wishes to proceed cautiously it may try the experiment on a more limited scale. If it succeeds, it will at once become general. If the sanguine expectations of those who call for railway reform should be realized, and reduction of rates be followed by increased profits, there can be no doubt that the example will be readily followed by all other railways. I am not, however, very confident of this result. A more probable result may be that there will be a small loss, bearing no proportion to the benefits conferred upon the public. In this event the experiment would be substantially successful, and the Government would have no hesitation in making similar arrangements with all other railway companies. Whatever may be the result, the nation will have the materials to enable it to decide whether it will procure the benefits of reduced fares and increased accommodation by paying the price which is necessary in order to procure them with justice.

Something like the above plan, although it may vary in details, seems to be the only course by which any great reform in railway management can be effected without injustice.

The principal facts are admitted by all parties. The railway companies have undertaken to make certain railways subject to conditions as to trains and fares imposed on them by various Acts of Parliament. The companies have fulfilled those conditions, and it is admitted that the country has derived immense advantages from the railways, although it is alleged that those advantages are not so great as they might have been if the railways had been differently managed. On the other hand, the railway companies have not made any extraordinary profits. Their profits are in fact less than the ordinary return to capital invested in any other trade. It would therefore be unjust to introduce any changes to reduce the profits of those who have already lost by the compact under which the railways were constructed, in order to increase the advantages given to those who have been exclusively gainers by the transaction. The public say to the companies, "Reduce your fares, and increase the "accommodation you give us, and you will find that the "traffic will increase so much that you will gain instead of "losing by the change." The companies reply, "We are "by no means sure of that, and therefore we do not wish to "try the experiment, but as you say that you are confident "that it will succeed, and as in any case you will gain con-"siderably by it, you ought to run the risk which you "think is so small."

This appears unanswerable, the public which is to profit by the experiment ought to encounter the risk: and the only point to be considered is, how to do this at the least expense.

It will also be the duty of the official director to take care that the reduction of fares shall be made in such a manner as not to interfere unduly with rival modes of conveyance, such as canal companies, or even other railway companies, if the experiment be partially made.

I believe that the experiment ought to be gradually and cautiously made, because it is impossible beforehand to form a reasonable conjecture of the effects which a considerable reduction of their rates may have upon railway companies.

Some of the calculations that I have seen are very wild. Thus one ingenious writer assumes that the rates through the United Kingdom may be reduced to one-third of their present amount, and that this would probably double the traffic without increasing the working expenses, and that the loss of net income might be estimated at five millions a year.

Now, taking the entire traffic of the United Kingdom to be at present 36 millions a year, which is a fair approximation to the truth, it is a matter of easy arithmetical demonstration that the annual loss on the above suppositions will be 12 instead of five millions.

It is also, I think, clear that the traffic of most railways cannot be doubled without a considerable increase in the working expenses. In the case of goods, the load is practically limited by the worst gradient on the line. This limit has been already reached in many instances; and, in such cases, if the traffic be increased, the working expenses must be increased in nearly the same proportion.

As to the passenger trains, when the number of passengers by any train exceeds the average of 70 for the whole distance (which implies that there will be a considerably greater number over particular parts and on special occasions), it is generally found to be more convenient to the public and to the railway company to meet additional traffic by putting on an additional train, instead of crowding the passengers into the trains already existing. The consequence is, that, whether the annual gross receipts of a railway be 1,000*l.* or 4,000*l.* per mile, the proportion of the working expenses to the gross receipts is found to be about the same. The proportion is generally between 40 and 50 per cent., and depends on the nature of the traffic, the rates, the gradients, and the state of the permanent way.

The modes proposed of avoiding or diminishing the loss of five millions (which ought to be computed at 12 millions) are, I think, fallacious. One is, that the saving by amalgamation of railways is calculated, or rather guessed, at two millions. To judge of the correctness of this guess, it is enough to observe that every penny of expense on each train mile is about equivalent to a total annual expense of half a million. Thus a total saving of two millions a year will imply a saving of 4*d.* per mile; and, on examining the items which compose the working expenses, it appears impossible that a mere amalgamation could cause a reduction of 4*d.*

On the most important items, and on the largest lines, it would have no influence whatever.

Another mode suggested of saving the loss is, that the State can borrow money on better terms than the railways. This seems an illusory source of profit. People are satisfied with less interest from the State because the security is better, and the transaction is not subject to any stamps. But it is not a legitimate financial transaction for the State to borrow money at low interest in order to lend it at higher interest on imperfect security, and no calculation of the profit of the proceeding is sound which leaves the insecurity entirely out of the question, especially when that insecurity is about to be increased by an experiment.

So far as the low rate of interest is caused by the exemption from stamp duty, the State cannot have much profit, for it loses nearly as much by the exemption as it gains by the low rate of interest.

It is probable that an issue of Government stock, to the value of the railways of the United Kingdom, would lower the funds more than 15 per cent. There is a limit to the number of persons who are willing to accept the low rate of interest in consideration of the other advantages which the funds possess, and it is clear that railway shareholders are chiefly persons who, to the extent at least of their shares, prefer the higher, although less secure, income derived from railways to the lower and more certain dividends from the funds.

I have made the above observations, not as an argument against the reduction of railway fares, but in order that it may be made with a full knowledge of its effects. I believe that no considerable reduction can be made without a loss which will not be covered by increased traffic for several years. I believe that the loss must fall upon the national finances chiefly, and that the expedients proposed to prevent the loss are illusory, and that ample compensation will be found in the increased wealth of the country consequent upon the reduction. The gain to the customers of the railways will necessarily be far more than the loss of net income to the railways. The latter will be equal to the reduction of charges on the old traffic, minus the profit on the increase of traffic; the gain will be the reduction on the old traffic, plus half the reduction on the new traffic. The indirect advantages of a reduction are probably still greater, but they cannot be made the subject of calculation.

I beg leave respectfully to submit these remarks to the members of the Royal Commission on Railways.

W. Longfield.

47, Fitzwilliam Square, Dublin,
May 1865.

Appendix G.

Letters from Mr. Wm. Oxlade of York.

(Alluded to in his Answer to Q. 1919.)

Gentlemen, York, 14th March 1865.

May I beg permission to lay before you the following facts concerning railway management.

The North-eastern Railway extends upwards of one thousand miles, and I find the charges are not made in accordance with the Company's Act of Parliament, but a system is adopted, by which a much higher rate is imposed, and the public are compelled to pay these charges.

For example, from Darlington to York, a distance of 44¼ miles, for limestone materials for the repair of roads, and all sorts of manure, the Directors order 8*s.* 4*d.* per ton to be charged; the Act of Parliament says for these articles not more than 3*s.* 9*d.* per ton shall be charged.

For iron ore, hoop iron, sheet iron, all sorts of wrought iron, lead ore, and tiles, the Directors order 8*s.* 4*d.* per ton to be charged; the Act of Parliament says not more than 5*s.* 7*d.* per ton shall be charged for carriage of these articles 44¼ miles.

For sugar in bags and casks, dyewoods, earthenware, and nails, the directors order 15*s.* 4*d.* per ton to be charged; the Act of Parliament says, for these articles, not more than 7*s.* 5*d.* per ton shall be charged for 44¼ miles.

For bark, hemp, sugar in lumps, the Directors order 16*s.* 8*d.* per ton to be charged; the Act of Parliament says not more than 11*s.* 2*d.* per ton shall be charged for carriage of these articles for 44¼ miles.

For furniture at the owner's risk, the Directors order 26*s.* 8*d.* per ton to be charged; the Act of Parliament says not more than 11*s.* 2*d.* per ton shall be charged for 44¼ miles.

For agricultural produce, such as hay, straw, flax, and teazles, the Directors order 26*s.* 8*d.* per ton to be charged, the Act of Parliament says not more than 11*s.* 2*d.* per ton shall be charged for the carriage of these articles 44¼ miles.

By these figures the public can find the charges they pay, and compare them with the charges they ought to pay.

The same system of charges is maintained at all the stations, and must be understood to be the rate of charges made for the carriage from station to station only, and does not include any carting.

It also appears these charges have been imposed and obtained for several years, and if an objection is raised, the officers have orders to refuse to carry and refuse to receive any less rate.

The carriage of coals is made a private agreement between the Railway Company and a few colliery owners. Under this agreement a high rate of charge for carriage is obtained and imposed upon the public to obtain these excessive charges. The Railway Company insist, and by their rule the colliery owners are required to consign all the coals to the Railway Company's agent; this agent sells the coal by retail at the railway station, and he has orders from the Railway Company to obtain the money before he supplies the coals. The public are not allowed to have any coals until they pay 40 per cent. per ton overcharge. The monopoly is completed at the railway station by converting the unloading facility into places of deposit and letting them to the favoured collieries; the owners of these collieries divide with the Railway Company the unfair profits obtained by monopoly, in consideration of their assistance the Railway Company allow the colliery owners a long credit in the leading charges. The money is obtained from the public in hard cash, and after deducting the pit price of the coals a payment is made to the Railway Company by the colliery owners acceptance. This unfair system of railway management destroys competition and the public are compelled to pay 40 per cent. per ton overcharge.

I have, &c.

To the Royal Commissioners on Railways. William Oxlade.

P.S. If any colliery owner refuses to assist in the unfair dealings then the Railway Company stop his trade by refusing to forward his traffic.

Wm. Oxlade.

Gentlemen, York, 14th March 1865.

In January 1864 I caused an application to be made to the Court of Common Pleas under the 2d Section of an Act of Parliament, called the Railway and Canal Traffic Act 1854, which says it is the duty of all Railway Companies to make arrangements for receiving and forwarding all the traffic without *undue and unreasonable* delay, and without *undue and unreasonable partiality*. The application was made upon an affidavit, and my counsel, Mr. Manisty, Q.C., read from my affidavit as follows:

"That in pursuance of a contract 16 trucks containing "coals, consigned to Mr. Oxlade were on the 4th day of "November 1863 tendered and delivered at Ferry Hill "Junction to the North-eastern Railway Company to for-"ward to Mr. Oxlade at Bedale, Leyburn, Richmond, and "York. The said trucks were in all respects fitted for the "purpose, no objection was made to the trucks nor to the "money tendered, and the said Railway Company had for "years passed, conveyed, and still convey coals for several "other persons from the said Ferry Hill Junction in "trucks similar in all respects to Mr. Oxlade's trucks. "And the Railway Company have daily since the 4th day

" of November 1863 conveyed trucks of coals from the " said Ferry Hill Junction to Bedale, Leyburn, Richmond, " and York, and have left Mr. Oxlade's trucks behind, " causing great loss, inconvenience, and damage. The " said trucks and their contents then were Mr. Oxlade's " property, and Mr. Oxlade then produced to the General " Manager of the Railway the sum of 50 pounds in Bank " of England Notes and requested him to take the Com- " pany's charge whatever it might be for forwarding the " said trucks as aforesaid. The General Manager of the " Railway then refused to accept the money or to make " arrangements for forwarding the said trucks, and refused " to give any information when they would be forwarded."

The Counsel for the Railway Company, Mr. Mellish, Q.C., read from affidavit sworn by the General Manager of the Railway, and in this affidavit he said he refused to forward Mr. Oxlade's traffic because it was against the interest of the Railway Company to do so.

Lord Chief Justice Erle gave judgment and said: " The " application was made under a Statute known as Card- " well's Act, and by that Statute this Court was required " to decide what was '*undue and unreasonable*,' and this " Court is of opinion that Mr. Oxlade has no right to " require the Railway Company to do that which is sworn " to be against the interest of the Railway Company, in the " opinion of this Court it is *undue and unreasonable* to re- " quire a Railway Company to do that which is against " their interest. We discharge the Rule with costs."

Against this judgment there is no appeal. I therefore humbly pray that you will not sit unconcerned while the liberty of the subject is invaded. And in conclusion I humbly pray that you will use your powerful influence to secure justice and bring this statute again before Parliament for amendment, or that you will cause the words "*undue and unreasonable*" to be struck out or construed with a fair and honourable regard to the interest of the public, and that the word "may" shall be struck out of the statute and substitute the word "shall," or that you will make such amendment as will secure justice and fair dealing to all.

I have, &c.

To the Royal Commissioners on Railways. WILLIAM OXLADE.

P.S.—I beg to say the North-eastern Railway managers claim a right to pick and choose their customers, and to centralize the traffic in coals into the hands of two or three agents giving them every facility and accommodation; and they are converting the unloading facility into places of deposit, and letting the same to favoured persons, and by refusing to carry and selecting their customers, they are creating a gigantic monopoly and compelling the public to pay from 2*s.* to 4*s.* per ton more for coals than the proper price.

W. OXLADE.

APPENDIX H.

LETTER and ENCLOSURE sent by the COMMISSION to various CHAMBERS of COMMERCE, and other PUBLIC BODIES in the UNITED KINGDOM.

ROYAL COMMISSION ON RAILWAYS.

House of Lords,
Westminster, S.W., 1865.

SIR,

I AM directed to forward you the enclosed summary of Her Majesty's commands to this Commission, and to ask whether you are desirous of offering evidence on any of the subjects referred to therein.

If so, I shall be obliged by your sending me the names of the witnesses who propose to come before the Commission, and a short statement of the general nature of the evidence they would give.

I am, &c.
WILLIAM POLE, Secretary.

ROYAL COMMISSION ON RAILWAYS, 1865.

COMMISSIONERS:—

His Grace the Duke of Devonshire, K.G., F.R.S., Chairman.
The Right Hon. the Earl of Donoughmore.
The Right Hon. Lord Stanley, M.P., F.R.S.
The Hon. E. F. Leveson Gower, M.P.
The Right Hon. Robert Lowe, M.P.
Sir Rowland Hill, K.C.B., F.R.S..
J. A. Roebuck, Esq., M.P.
T. B. Horsfall, Esq., M.P.
Robert Dalglish, Esq., M.P.
Geo. Carr Glyn, Esq., M.P.
A. S. Ayrton, Esq., M.P.
Capt. Douglas Galton, R.E., F.R.S.
E. T. Hamilton, Esq.
J. R. M'Clean, Esq., Pres. Inst. C.E.
WILLIAM POLE, F.R.S., Secretary.

Five Commissioners to form a Quorum.

House of Lords,
Westminster, S.W., March, 1865.

SUMMARY OF HER MAJESTY'S COMMANDS TO THE COMMISSION.

1. To inquire into the *charges* now and heretofore made by the railway companies of Great Britain and Ireland, for the conveyance of passengers, parcels, goods, minerals, animals, agricultural products, and other merchandise.

2. And into the *equality* or *difference* of such charges under similar circumstances, whether as between different companies, or by the same company in different cases; and whether there are any special circumstances which render necessary such inequality or difference.

3. And into the actual *costs* of such conveyance.

4. To compare such costs and charges with those (relatively to the accommodation and service) on *Foreign Railways.*

5. To report whether (with a due regard to the progressive extension of the railway system) it would be practicable, by any changes in the law;

a. To effect a more convenient *interchange of traffic* between the several systems of railways; and

b. More economical arrangements for the working of railways; so as to make any considerable *reduction* in the *costs* of conveyance;

c. And in the *charges* to the public;

d. And to secure more effectually the *safe, expeditious, punctual* and *cheap transit* of passengers and merchandise;

e. With as near an approach as may be to *uniformity of charge*, and *equality of treatment* for all persons under similar circumstances.

APPENDIX K.

MEMORIAL from the LIVERPOOL CHAMBER OF COMMERCE, addressed to the Right Hon. the PRESIDENT OF THE BOARD OF TRADE, and referred to this COMMISSION.

Chamber of Commerce, Liverpool,
21st January 1865.

SIR,

I AM directed by the Council of the Liverpool Chamber of Commerce respectfully to ask your attention to the excessive and unequal rates levied by the Railway Companies on the traffic to and from Liverpool, as compared with the rates charged for the carriage of the same goods, for equal distances, to and from other ports.

During the past two Sessions of Parliament, Mr. Horsfall has endeavoured to obtain from the Companies returns showing the rates charged on the traffic from Liverpool and the other ports respectively; but though these returns were ordered by the House of Commons, they have not yet been presented by the Companies principally concerned.

Sufficient facts, however, have been collected to show that the traffic of Liverpool is burdened with charges far in excess of those imposed on that of other ports. The table of rates compiled by the Corn Trade Association completely establishes this conclusion; and the injury which such excessive charges inflict is not confined to any one branch of trade, but is felt with peculiar severity by all who deal in goods of which the value is small in proportion to the weight.

Special reference is made to the table of the Corn Trade Association, not because this trade is worse treated than other trades, but because this table has been submitted to a meeeting of the Railway Directors, and having been revised by the goods manager of the London and North-western Railway Company, has acquired in some measure an official sanction.

These considerations have an important bearing on the interests of that portion of the national traffic which flows through the port of Liverpool.

The trade of Liverpool is essentially a transit trade. The imports into Liverpool are for the most part not consumed in it, but are distributed mainly by Railways over the country.

The exports are, for the most part, not contributed by Liverpool, but are sent here for shipment from Yorkshire, Staffordshire, Lancashire, and other places.

It is clear that a system which obstructs the inland carriage of goods to and from Liverpool, by the imposition of heavy tolls, must tend to drive the trade to other places more favourably treated, and thus must curtail the prosperity of the port.

This is no idle fear. Already, in consequence of these differential charges, a considerable amount of traffic has been diverted from Liverpool, to the injury alike of the individual trader and of the port.

Nor is this the only fear. The extra charges are so imposed as to force the traffic out of its natural channels, and enable the Companies to offer a bounty to divert it into channels through which it would not otherwise flow. The fact is, that the traffic to and from Liverpool frequently overtasks the means provided for its accommodation, and the Companies, instead of affording increased accommodation for the increased traffic, endeavour to divert the traffic by exacting excessive rates.

The result of this policy is, that consumers of imports, and producers of exports, in the great and populous district of which Liverpool is the natural maritime centre, are burdened with a tax, and restricted in their trade, in order that unprofitable extensions in other directions may be made to pay.

Such a system is an injustice to the consumer and an injury to the trade, and it is respectfully submitted for your consideration, whether it is not a departure from those principles of public policy on which all concessions to Railway Companies are based.

It cannot be contended that there are any peculiar expenses connected with the carriage of goods to and from Liverpool, as contrasted with other places, which justify the extra charges. The traffic is not only large, but, allowing for the fluctuations in trade, which affect all ports equally, it is remarkably regular; the outward traffic usually balances the inward, thus securing for the trucks a full load both ways; and whilst they do not ask for any special advantages, the Council think it is not unreasonable to demand that Liverpool shall be placed in a position, as regards railway carriage, at least as favourable as that of any other port.

It is the intention of the Railway Companies to apply to Parliament in the ensuing Session for additional powers affecting the Liverpool traffic; and the Council earnestly hope that Her Majesty's Government will use the means and influence at its command to compel the adoption by the Companies of a more equitable scale of rates, as the indispensable preliminary to any addition of powers.

I beg to enclose the table of rates compiled by the Corn Trade Association, to which reference is made above.

I have, &c.

The Right Honourable T. Milner Gibson, M.P., President of the Committee of Her Majesty's Privy Council for Trade.

(Signed) HENRY GRAINGER.

ASSOCIATION OF THE LIVERPOOL CORN TRADE.

"	1862	795,888	6,487	2,127	19,282	21,761	9,282	—	293,890	—	19,055	137,255	280,473	291,500
"	1863	366,112	4,662	2,334	24,277	20,074	6,666	—	191,322	—	46,039	84,930	138,408	159,000
"	1864	—	—	—	—	—	—	—	—	—	—	—	—	—

The above figures indicate that the corn trade, which in 1860 was the largest trade in Liverpool, had in 1861 and 1862 increased 50 per cent., and its contribution to dock revenue, which was about equal to 90,000*l.* in 1860, amounted in 1862 to about 150,000*l.*; and for the four years ending 31st December 1864, it will be found the largest trade in Liverpool in tons weight, and also as regards the income of the port. It is now, however, exposed to much greater competition from the rapidly extending system of directing cargoes of grain to ports of call for orders to discharge at any safe port in the United Kingdom.

In February 1864 a table of rates charged for grain upon railways, and by canal from Liverpool to places in the interior, and also from other ports, was prepared by the Association of the Liverpool Corn Trade. Since then no substantial change has been made, but as it has been revised by the goods manager of the London and North-

western Railway, it is now re-issued in a similar form, with the emendations so made. It has since transpired that not only are "through rates" arranged from continental and other ports, by which important reductions from the printed rates are allowed (especially upon French flour at Goole, &c.), but by an extension of this system to the Irish traffic, goods are even carried through Liverpool at a cheaper rate than is available to the Liverpool trader; thus, in some measure redressing the injustice to carriers to Liverpool, but increasing such to the Liverpool factor. It is submitted that if the carriage to Manchester was 5*s.* per ton, instead of 8*s.* 4*d.*, arrangements for a preferential bonus of 2*s.* 6*d.* to 3*s.* 6*d.*, as at present, would not be so readily made. It is further to be borne in mind, that the railways carrying from Goole, Hartlepool, Fleetwood, &c., not only charge lower rates, but load goods direct from ship, and so obviate cartage and porterage. Apart, however, from these private and somewhat obscure arrangements, the avowed charges disclose many inequalities; for example,—

		s.	d.
Fleetwood to Manchester	50 miles	7	4
Liverpool to „	32 „	8	4
London to Birmingham (nominally 13*s.* 10*d.*, including lighterage and cartage)	111 „	11	4
Liverpool to Birmingham	98 „	12	6
Bristol to „	90 „	8	10
Cardiff to „	109 „	9	6
Gloucester to „	53 „	5	6
Gloucester to Derby	96 miles	7	0
Liverpool to „	95 „	15	0
Do. to Burton-on-Trent			
Gloucester to „			

The result of inquiries induced the belief that the cost of terminal charges at Liverpool and Manchester, which was greatly insisted upon by present carriers, was much exaggerated, and an opportunity having presented itself upon the examination of Captain Huish before a Committee of the House of Commons, the Estimate of the Corn Trade at 2*s.* per ton for terminals was pronounced by him to be "ample;" it is again presented as the basis of a table, graduated to distance as follows (terminal 2*s.*, being a constant quantity).

Tariff of Rates of Railway Carriage of Grain proposed by the Association of the Liverpool Corn Trade from Station to Station. Warehouse accommodation, after a reasonable time for removal, to be charged for, and actual weight to be, in all cases, charged for.

Distances under 6 miles, as 6 miles	1/0, and 2/0 terminals =	3/0		
Under 12 miles, 1½*d.* per ton per mile, but not exceeding	1/3	„	„	3/3
Under 24 miles 1¼*d.*	„ 2/3	„	„	4/3
„ 48 „ 1⅛*d.*	„ 4/0	„	„	6/0
„ 96 „ 1*d.*	„ 7/0	„	„	9/0
96 miles and upwards, ⅞*d.*

NOTE.—From Liverpool all goods are charged upon exact weight; from East Coast Ports weight is, in many cases, computed from measure, to the advantage of the owner of goods 5 to 15 per cent.

Liverpool, December 1864.

APPENDIX L.

RESOLUTION of the ASSOCIATION of CHAMBERS of COMMERCE of the UNITED KINGDOM.

Presented by Deputation to the Right Hon. the President of the Board of Trade, and referred to this Commission.

At a Meeting of the Association of Chambers of Commerce of the United Kingdom, at Westminster, on Tuesday, February 21st, 1865,

IT WAS RESOLVED,

THAT the present mode of charging the rates on goods traffic by railway is unequal and unjust, not being regulated by the exigencies of trade, but generally by the ability to combine which exists among the leading companies, and which operates prejudicially, not only upon the trade of inland towns (where competition by shipping is impossible) but upon some of the most important manufacturing interests of the country.

That a deputation from this association wait upon the Right Honourable the President of the Board of Trade, and the Right Honourable the Chancellor of the Exchequer, for the purpose of urging the necessity of an inquiry, either by a royal commission or by a parliamentary committee, into the mode of fixing charges upon goods conveyed by railways, and generally into the working of the railway system in connexion with trade.

APPENDIX M.

(*Translation.*)

MEMORANDA on BELGIAN RAILWAYS.

(*Communicated by one of the Commissioners, and referred to by M. Fassiaux in answer to Question* 3059.)

1. To what extent are the railways the property of the Government?

Up to the 31st December 1863 the railways worked in Belgium extended over 2,011,759[a] metres.

The State works 748,606[b] metres, of which it has itself constructed 559,885[c] metres, which are its exclusive property.

189,721[d] metres have been constructed by private companies and are worked by the State, on condition of a certain portion of the receipts being ceded to the said companies.

The State has besides constructed a length of line amounting to 10,220[e] metres, which it has ceded to a company who have undertaken to extend the line, in consideration of a premium or subsidy, on account of the small importance attached to the future proceeds of such line.

The lease of lines, the construction of which has been granted to private companies, (which lines may be worked either by the State or by the companies themselves,) is generally limited to 90 years, at the expiration of which term the Government takes the place of the companies in all their rights of proprietorship, &c.

In addition, the specification of the leases stipulate that the land required for the construction of the railway and its accessories shall be acquired in the name of the State.

The general state of things may, therefore, be thus described, viz.:—

1. The railways constructed and worked by the State belong to it without reserve, and the State derives the profit or suffers the loss (as the case may be), resulting from such working.

2. The railways constructed by private companies, and worked by the State, are likewise the property of the State, and the proportion of receipts paid over to the companies must be regarded as their remuneration for the work of construction executed by them.

3. The railways constructed as well as worked by private companies may also be regarded as fundamentally the property of the State; the State surrendering, for a definite period, the profit of such lines to the companies, on condition of their providing for the proper maintenance of the lines, and also bearing the whole cost of working, after completing the construction of them.

2. How was the land obtained on which the Government railways have been made?

According to the law in force in Belgium, the land necessary for the formation of railways has been acquired in pursuance of Royal decrees, which direct the compulsory sale of such land for the public good.

In consequence of these decrees the Government has placed itself in communication with the owners of the land, of which it has taken possession in legal form, in those cases in which the Government and the owners have been agreed as to the price and condition of sale.

But when there has been disagreement on these points, that is to say, when claims believed to be exorbitant have been put forward, the matter in dispute has been settled by the courts of law.

Some lands have been ceded to the Government gratuitously.

3. Was more than the market value of the land given?

The explanations which will be given in answer to question 4 will show that it is extremely difficult to give a reply to this question.

4. How was the price of the land determined?

So far as regards the land on which the railway itself is constructed, the basis on which the offers of payment to the owners have usually been founded has been the prices obtained by public sale at the nearest date, for the neighbouring land under analogous conditions. In default of these means of valuation, reference has been made, by mutual consent, to skilled arbitrators or valuers, whose valuation could be relied upon as representing the market value of the land.

But it has frequently happened that various considerations have tended to enhance the claims of landowners, such, for instance, as the depreciation in the value of the land remaining after the compulsory sale of so much as was required for the construction of the railway, difficulties in cultivating pieces of land severed by the railway which previously were undivided, &c. In such cases, more especially, the claims of the landowners have often been exorbitant and reference has had to be made to the courts of law, which have given their decision after hearing the opinions of arbitrators or valuers appointed by themselves.

The purchase of land necessary for the construction of stations and the buildings connected therewith has led to expenses proportionately much larger, and has given rise to much greater difficulties. Generally speaking, the establishment of a station or a stopping place at any point whatever of a railway immediately gives to the adjoining land an increased value, and the claims of the landowners increase more than proportionately.

The purchase of the land in these cases also has been effected partly by agreement and partly by appeals to the courts of law. In some few cases, however, the land has been ceded to the State gratuitously.

As a matter of course, the Government has had to pay, besides the price of the land, compensations, more or less, for the loss of crops, of profits arising from manufacturing works, &c.

5. What has been the cost of the permanent ways?

The construction of the permanent way, properly so called, of the lines constructed by the State had cost, up to December 31, 1863, the sum of 133,477,400 francs[a], distributed in the following manner:—

	Frs.	c.	£
Price of land, compensation for crops, cost of purchase, &c.[b]	26,578,239	60	[b] 1,063,1
Legal expenses[c]	668,487	68	[c] 26,7
Earthworks, works of art, and laying the permanent way[d]	67,068,586	44	[d] 2,682,7
Materials — sleepers[e]	7,075,254	05	[e] 283,0
Materials — rails and fittings[f]	30,471,880	38	[f] 1,218,8
Fencing, planting, &c.[g]	192,606	07	[g] 7,7
Management up to time of opening[h]	277,101	04	[h] 11,0
Total	132,332,155	26	5,293,2

[a] About 5,339,000

These expenses distributed over the lines constructed by

the State, viz., 569[a] kilometres, 105 metres, give a sum of 232,526[b] francs, 79 centimes per kilometre.[c]

6. What has been the expense of constructing the stations?

	Frs.	c.
Up to December 31, 1863, a total sum of had been expended on the lines made by the State for the construction of stations, including workshops, warehouses, &c.	[d]21,554,885	28
And for station fittings (switches, platforms, paving, &c.) - - -	[e]6,203,446	28
Total - - -	[f]27,758,331	56

These figures represent respectively an expense per kilometre of

[g]37,875 frs. 5 centimes.
[h]10,900 „ 35 „
[i]48,775 „ 40 „

7. Was the work done by public competition?

All the works of art, bridges, viaducts, station buildings, &c., were executed by public competition, by means of tenders for contracts at a lump sum.

The construction of the line has been effected partly in the same manner, each contract comprising all the earthworks, cuttings, and embankments, embraced in a section of from [k]50 *to* 60 *kilometres.*

With regard to the other parts of the railway, the works have been done by competition, not for a lump sum, but on a schedule of prices, according to which the work is measured up when executed, and paid for according to the quantities in cubic metres of earthworks, cuttings, embankments, &c. This mode of procedure has been adopted, owing to the necessity of pushing on the work with a celerity which rendered it impossible to prepare, previous to the letting of the contracts, those specific plans and estimates, which are indispensable in the case of contracts for a lump sum.

Certain works which have been executed after the working of the railway has commenced, and which have still to be executed occasionally for the completion or maintenance of a line, are undertaken by day-work, that is to say, by workmen belonging to the Company, and under the direction of the company's officers; this mode does not admit of public competition, and applies chiefly to works which require the employment of men accustomed to that particular labour, such, for instance, as laying down the sleepers, rails, &c., the construction of second lines of rails or sidings, fixing turntables, &c. The men employed on these works have substitutes provided for their ordinary work, and their wages are charged to the capital account, whilst as long as they are employed on their ordinary work, they are paid out of the ordinary working expenses.

It is understood, that the materials, (sleepers, rails, &c.,) required for works of this kind, are provided by the usual public competition for such supplies.

8. What has proved to be the cost, on an average, of each kilometre of permanent way, including the cost of stations?

	Frs.	c.
The answers given in reply to questions 5 and 6, show a total expense for permanent way of[l] - - -	132,332,155	26
For the construction of stations, and station fittings[m] - - -	27,758,331	56
The addition of these sums gives a total of[n] - - - - -	160,090,486	82

That is to say, that for the 569 *kilometres,* 105 *metres*[o] of railway constructed by the State up to the 31st December 1863, an average expense per *kilometre*[p] of 281,302 *frs.,* 19 *cents.,*[q] has been incurred for the entire formation of the Railway, including stations, station fittings, &c.

9. At what expense has the floating capital been procured?

The floating capital, by which must be understood the total of the sums destined to provide for all the requirements of the working, does not occasion any expense either in the case of the railways worked by the State, or of those worked by private companies.

In the case of the former, these sums form part of the ordinary estimate or budget of the department of public works, which budget is voted annually by the Legislature, and sanctioned by the King. This course is prescribed by the law regulating the accounts of the State, which law, amongst other things, prevents the Government from incurring any expenses which are not thus voted, and specially prohibits the application of any part of the receipts to meet any expenditure whatever.

The same law does not regulate the accounts of private companies, who simply draw upon their receipts for the expenses of working.

10. Does the Government work the railways or do private companies?

The answer to question 1, shows that, up to the 31st December 1863, of the 2,011 *kilometres,* 759 *metres*[a] of railway lines existing in Belgium, 748 *kilometres,* 606 *metres*[b] were worked by the State, 1,263 *kilometres,* 153 *metres*[c] were worked by private companies, and that under the first head are comprised 189 *kilometres,* 721 *metres*[d] of lines constructed by private companies, whilst under the second head are comprised 10 *kilometres,* 220 *metres*[e] of line constructed by the State, but ceded afterwards to private companies who have extended the lines.

[a] 1,247 miles.
[b] 464 miles.
[c] 782 miles.
[d] 117 miles.
[e] 6⅓ miles.

So that the working of Belgian railways embraces almost every possible system, viz.:—

1. Construction and working by the State.
2. Construction by a private company and working by the State.
3. Construction and working by a private company, in some cases with a guarantee by the State of a minimum dividend on the capital invested in construction,—in other cases without such guarantee, according as the working of the line promises to be more or less profitable.

The working by the State of lines constructed by itself, is decidedly, up to the present date, the most considerable, as compared with the number of miles worked by any one private company.

11. If the latter, (that is to say, in the case of railways worked by private companies,) does the Government grant leases to these companies, and is the work performed satisfactorily?

The railways, the construction and working of which have been left to private companies, are conceded to such companies in pursuance of law, and form the subject of agreements and specified conditions, embracing stipulations as regards both construction and working.

These documents constitute a sort of contract or lease, and specify the obligations as well as the rights of the lessees; in other words, the conditions on which the State accords to such lessees the right of working the lines to their own profit, for a specified period.

The duration of these leases is usually 90 years.

In those cases in which the construction only of a railway is conceded to a private company, the agreement and specifications determine everything that relates to the formation of the railway, as well as the conditions on which the State will undertake the working of the line. In these cases also, as well as in those previously mentioned, the agreement has reference to a specified period.

12. Are there any clauses in the leases, giving to the Government special privileges with regard to the conveyance of troops, mails, &c.?

The conditions and specifications stipulate—

1. That soldiers on duty shall be conveyed at half-price.

2. That if the Government shall desire to forward troops or military stores to any particular point on the railway, the company shall be bound to place at its disposal all the means of transport in their power at half the ordinary toll or tariff.

3. That whenever the State shall require a special train to be sent, whether by night or by day, the company shall be bound at once to comply with such requisition, the payment for such train to be settled afterwards.

4. That the company shall be bound to send, on demand, by their ordinary trains, prison vans, and that the officers, warders, and police accompanying such vans shall be carried free.

5. That the company shall be bound to convey, without charge, by all ordinary trains, in both directions, over the whole extent of the railway, travelling post office, bags of letters, and the officers employed on the postal service. In addition, the Government can require the establishment of one train a day, in each direction, at specified hours.

13. Are there any clauses imposing penalties in case of accidents or great neglect, and requiring certain precautions to be taken?

There are no clauses providing specially for cases of accident, or for penalties consequent upon them.

But, according to the specified conditions, the general laws and regulations in existence at the period when the lease comes into operation, or enacted subsequently as applicable to the Government control of railways, are by

law applicable to all lines leased, and the laws and regulations themselves provide for legal proceedings in case of accidents arising from neglect, or inattention to the rules laid down by the State.

In those cases in which the lessees interrupt or neglect the working of the line in whole or in part, the Government is empowered to work the line on the company's behalf and account, making use for that purpose of the rolling stock and all other necessaries for working the same as if the line belonged to the State.

And if, during the three months of such provisional official working, the receipts do not amount to a certain specified limit, the company is deprived of all its rights.

In addition, the lessees are bound to submit to the Government before commencing the working of any part of the line, their working regulations, embracing all the orders and arrangements necessary for the efficient and safe conduct of the traffic. After approval or modification by the Government, these working regulations are strictly binding on the company.

14. By whose authority are the tariffs both for passengers and goods fixed?

In a certain number of the specifications a maximum limit is fixed for the different tariffs. The lessees are at liberty to charge anything below such tariff, but they are not allowed to exceed it.

The specifications in the most recent leases stipulate that the tariff of charges on the line leased shall be on the same basis as the state tariffs, and that any modifications of the State tariffs shall be applicable to the tariffs of the line leased. In this case also the charges of the lessees may be below these limits, which are considered as maximum charges.

It follows, that in the leases regulated by the first of the above specifications, the companies are at liberty to maintain their tariffs at the extreme limit, even although such limit may be higher than the tariff in force on the State lines; whilst in the last-named cases the companies are obliged to lower their maximum limit whenever the State reduces its limits.

In both cases it is the Government which, with the approval of the Legislature, determines the charges which cannot be exceeded, and which decides that the companies can reduce their charges, it being an invariable condition that the charges shall be uniform, without any favour or prejudice, and on condition of the previous assent of the Minister of Public Works.

As regards the lines worked by the State, the tariffs are determined by law only as regards the conveyance of passengers and luggage. Another law leaves provisionally to the Government the power of fixing the charge for all other articles conveyed (goods, bullion, &c.).

15. What are the general charges for conveyance, (say for 100 kilometres), of a passenger in each class of carriages and for various kinds of goods, including coal?

The tariffs for passengers on lines worked by the State is fixed as follows:—

		fr. c.		fr. c.
Express trains	1st class	0 10	per kil.,[a] with min. charge of	1 0
	2nd „	0 075	„ „	0 50
Ordinary trains	1st class	0 08	„ „	0 80
	2nd „	0 06	„ „	0 30
	3rd „	0 04	„ „	0 20

The tariff for luggage is 6 centimes per kilometre and per 100 *kilogrammes*,[b] with a minimum charge of 50 centimes. Every passenger is allowed to convey free 25 *kilogrammes*[c] of luggage,* as well as any articles which can be placed under the seats of the carriage, without inconvenience to the passengers.

Goods are conveyed at the following charges:

In the first instance all articles conveyed are divided into three classes.

1st. Small packages or post parcels (tariff No. 1), under 10 *kilogrammes*,[d] and above that weight at the request of the sender.

2nd. Light goods or coach parcels from 10 *to* 300 *kilogrammes*[e] (tariff No. 2), unless the sender shall have especially required them to be sent under tariffs 1 or 3.

3rd. Heavy or carriers goods (tariff No. 3) divided into four classes.

Tariff No. 1.

Uniform charge for all distances, 50 centimes for packages of 2 kilogrammes[f] and under.

Uniform charge for all distances, 75 centimes for packages above[g] 2 kilogrammes and up to 5 kilogrammes.

Uniform charge for all distances, 1 franc for packages above[h] 5 kilogrammes and up to 10 kilogrammes.

Uniform charges for all distances 10 centimes per kilogramme,[a] (with a minimum charge of 1 franc), for every package above 10 kilogrammes, whenever the sender expresses a desire that the package shall be sent under this tariff.

Tariff No. 2.

001 centimes per 5 *kilometres*[b] and per 10 *kilogrammes*,[c] in addition to a fixed charge of 05 centimes per 10 kilogrammes, with a minimum total charge of 1 franc.

These charges (for tariffs 1 and 2) include all incidental expenses, *except collection*, for which an additional charge is made when such collection is required, at the rate of 15 centimes per 1,000 *kilogrammes*.[d]

(N.B.—This tariff, which is the subject of much complaint, will be shortly modified.)

Tariff No. 3.

The charges under this tariff consist of a fixed charge of 1 franc uniform for all distances, and of a variable charge, the amount of which is determined in the following manner.

1*st Class.* 50 centimes per 5 *kilometres*.[e] In addition to the fixed charge of 1 franc a minimum charge of 30 centimes per 5 kilometres is made for distances from 20 *kilometres*[f] to 60 *kilometres*.[g]

Beyond this distance an increased charge is made at the rate of 25 centimes per 5 kilometres, and this charge corresponds with that of 500 *kilogrammes*,[h] calculated at the ordinary rate, with the addition of the cost of loading and unloading, which is not included in the said ordinary rate.

2*nd Class.* 40 centimes per 5 kilometres up to 150 *kilometres*.[i] Beyond this distance, the increase is not more than 10 centimes per 5 kilometres.

The minimum charge is fixed at the rate of one complete charge for 4,000 *kilogrammes*.[k]

3*rd Class.* 30 centimes per 5 kilometres up to 150 *kilometres*,[l] and 5 centimes above.

The minimum charge is at the rate of one complete charge for 5,000 *kilogrammes*.[m]

4*th Class.* 20 centimes per 5 kilometres up to 150 kilometres, and 5 centimes above.

The minimum is the same as for 3rd class.

The above charges indicate the rate per 1,000 *kilogrammes*,[n] (except as regards the minimum charges of the 1st class.)

These charges do not include the following incidental expenses, viz.:

	frs. c.
Booking, for each despatch (compulsory) -	0 20
Collection per 100 *kilogrammes*[o] (optional) -	0 15
Delivery „ „ -	0 20
Loading and unloading (conditional) - -	0 10
Notice of arrival, for goods left to be called for (compulsory) - - - -	0 10

From the above it will be seen that the charges per 100 *kilometres*[p] are as follows:—

PASSENGERS.	fr. c.
Express trains, 1st class - - -	10 0
„ 2nd „ - - -	7 50
Ordinary trains, 1st class - - -	8 0
„ 2nd „ - - -	6 1
„ 3rd „ - - -	4 0
100 *kilogrammes*[q] of luggage - -	6 0

GOODS.

Tariff No. 1. The charge is uniform for all distances.

	fr. c.
Tariff No. 2, 55 *kilogrammes*[r] (charged as 60) -	1 50
Tariff No. 3, 1st class, 1,000 *kilogrammes*[s] -	11 0
„ 2nd „ „ - -	7 50
„ 3rd „ „ - -	5 75
„ 4th „ „ - -	4 0

In addition to the incidental charges mentioned above.

COALS are carried at the charges named in tariff No. 3, 4th class.

Those coals which are intended to be exported by sea are charged at the rate of 15 centimes per ton, (1,000 kilogrammes[t]) and per five kilometres, the charge made in no case exceeding what would be the ordinary charge under tariff No. 3, class 4.

Lastly, a reduction of 25 centimes per ton of the charges under tariff No. 3 in each of the four classes is made to those senders who undertake to send daily during a period of at least six months, one or more truck-loads between any two stations.

BULLION.

For the conveyance of bullion a charge is made, whatever the distance, at the rate of 25 centimes per 1,000 *francs*,[u] with a minimum charge of 50 centimes.

* This statement is incorrect. See Evidence, Question 3140.

[a] 2·2 lbs.
[b] About 3 miles.
[c] 22 lbs.
[d] 220 lbs.
[e] About miles.
[f] 12½ mil
[g] 37½ mil
[h] About lbs.
[i] About miles.
[k] About 8 lbs.
[l] About 9 miles.
[m] About 1 lbs.
[n] 2,200 lb
[o] 220 lbs.
[p] About miles.
[q] 220 lbs
[r] 121 lbs.
[s] 2,200 lb
[t] 2,200 lb
[u] 40*l*.

CARRIAGES.

A fixed charge of six francs in addition to a charge of three francs per league, per carriage. This charge is the same as that of tariff No. 3, class 1, calculated for 6,000 *kilogrammes*.[a] 13,200 lbs.

HORSES AND CATTLE.

By quick trains.—A variable charge at the rate of two francs per truck, and per five *kilometres*,[b] in addition to a fixed charge of six francs, making in all 46 francs per 100 *kilometres*.[c]

[b] About 3⅛ miles.
[c] About 62½ miles.

By slow trains.—First class (one horse, one or two oxen, cows or donkeys, one to five pigs or calves, one to ten sheep) 60 centimes per league, in addition to a fixed charge of three francs, making for 100 kilometres, 15 francs.

Second class (two horses, three or four oxen, cows or donkeys, six to 10 pigs or calves, 11 to 20 sheep) 90 centimes per league, in addition to a fixed charge of four francs, 50 centimes, making for 100 kilometres, 22 francs, 50 centimes.

Third class (three horses, one truck of larger or small cattle,) one franc, 20 centimes per league, in addition to a fixed charge of six francs, making for 100 kilometres 30 francs.

16. If the railways be worked by private companies, what is the general dividend which these companies receive?

The dividend divided amongst the shareholders of railways worked by private companies is drawn from the profits of the undertaking, or from the excess of receipts over disbursements, and the amount of course varies according to such excess.

The numerous companies existing in Belgium, and the different results of their working, render it impossible to reply categorically to the above question.

It may be stated, however, that the most favourable result of the operations of private companies gives an interest of 5·60 per cent. on the capital expended in construction, whilst the working by the state produces 6·81 per cent. on the same capital. Nearly the whole of the lines granted to private companies produces less than three per cent., and only three above that amount.

17. If the railways be worked by the Government, and be wholly their property, what has been the whole outlay, and what interest does this outlay yield?

So far as regards the lines worked by the State, the capital embarked up to 31st December 1863 in the construction of the lines amounted to a total of 210,253,193 francs 6 centimes,[d] and the result of the working showed an interest of 6·81 per cent. on this capital. [d] 8,410,128*l*.

This expense would be reduced to 209,096,103 francs 25 centimes[e] by deducting a sum of 1,157,089 francs 81 centimes[f] expended in the construction of a line which is not yet finished. This adjustment of the account raises to 6·828 per cent. the interest on the captal embarked in lines actually at work. [e] 8,363,844*l*. [f] 8,628*3l*.

18. If the land and the permanent ways and stations belong to the Government, what has been the expense under each head, what interest does this outlay produce, and how is that interest procured?

The following is the division of the cost of the first formation of the lines constructed by the State in accordance with the question asked above.

	frs.	c.	£
Price of land, compensation for loss of crops, &c.	26,578,239	60	1,063,129
Legal expenses	668,487	68	26,739
Earthworks, works of art, and laying the permanent way	67,068,586	44	2,682,743
Materials for sleepers, rails, and fittings	37,547,134	43	1,501,885
Fencing, planting, &c.	192,606	07	7,704
Management up to time of opening	277,101	14	11,084
Construction of stations and station buildings, &c. — frs. 21,554,885 c. 28			
Station fittings, switches, platforms, paving, &c. — 6,203,446 28	27,758,331	56	1,110,332
To this sum should be added,—			
1st. The expense incurred by the State for the completion, renewal, or extension of lines constructed by private companies and worked by the Government, viz.:—			
For land, permanent ways, &c. — frs. 1,225,365 c. 73			
For stations, &c. — 583,944 51	1,809,310	24	72,372
2nd. General expenses, staff, surveys, office expenses, &c., say	5,240,456	62	209,618
3rd. Cost of rolling stock, locomotives, carriages, &c., say	41,955,849	57	1,678,234
Total	209,096,103	25	8,363,840

Being the same amount as is shown in the reply to question No. 17. But it would be impossible to indicate, except by a subdivision of the interest named in question No. 17, viz., 6·828 per cent., the proportion of interest applicable to each of the items forming the total of the above-mentioned cost of construction.

19. Does experience show the expediency of the railways belonging to the Government?

The experience obtained in Belgium of the working by the State of at least a portion of the railways existing in that country, is entirely in favour of that system.

The results indicated in reply to the preceding questions are proof of the above statement in a financial point of view, and notwithstanding this superior financial result, the lines worked by the State are those kept in the best order, and the working of which gives the greatest satisfaction to the commercial world and the public in general, as regards regularity of conveyance, cheapness of transit, and the comfort of travellers.

The State not being solely guided by the prospect of financial gain, but having constantly in view the interest of the public which it represents, is in a better position than private companies to introduce all desirable improvements, not only as regards the efficient performance of the service, but also as respects the cost of conveyance, without, however, altogether disregarding the increase of revenue which its operations may bring into the public treasury.

The State railways thus find themselves placed in constant comparison with the railways worked by private companies, on the one hand stimulating them to general improvements, and on the other hand acting as a sort of check against any attempt to realize extravagant profits at the cost of the public.

APPENDIX N.

STATEMENT laid before the CHAMBER of REPRESENTATIVES at BRUSSELS, on the 7th MARCH 1865, concerning the TARIFF for PASSENGERS and LUGGAGE on the RAILWAYS of the STATE.

(*Translated, for the Commission, from a Brussels Journal.*)

GENTLEMEN,

THE object of the law project which I have the honour to submit to your deliberations is to authorize the Government to regulate, temporarily, by administrative measures, the tariff for passengers and luggage on the railways of the State.

In asking these powers, the Government are actuated by one idea alone,—to introduce successive reforms into this tariff by means of prudently attempted experiments, and improvements graduated so as, on the one hand, to render the railway more accessible to the public, and on the other, not to compromise the financial state of that institution.

Indeed, Gentlemen, if it were possible to extemporise a complete system of reform, if it were possible to provide against the serious financial miscalculations which might be the consequence of general and radical measures, the Government would not hesitate to submit a complete project to your deliberations. But except a few partial experiments, such as excursion trains, return tickets, season tickets, there exists no precedent in any extensive scale of working.

The scale of charges for passengers is everywhere based on an equal kilometrical rate, a foundation which seems neither rational, since it presumes the kilometrical equality of working expenses; nor commercial, since it produces an increase of fare which, beyond the natural obstacles opposed by distance to changes of place (*déplacements*), adds a kind of tax that renders travelling onerous, if not impossible, to the inferior and even to the middle classes of society.

The reforms successively introduced by Government in the tariff of goods have met with the assent of the country and its representatives. Other projected or desired improvements will yet be accomplished in time. But I do not hesitate to declare that the Government themselves would perhaps have recoiled before these reforms if it had been a question of proposing them in a project as a whole, and of putting them simultaneously into execution.

In admitting the knowledge, experience, and energy necessary to the elaboration of such a project, one would have drawn back before its financial consequences;—before a possible and immediate diminution of many millions in the receipts.

The Government then have striven to examine the ground carefully by means of successive trials; they have prudently advanced from reform to reform in such a manner as to produce the desired good, still maintaining untouched the admirable financial state of our national network of railways.

The essential basis of the reforms introduced in the tariff of goods has been the reduction of the kilometrical rate in proportion to the increase of distance.

The Government think that it would be useful and just to apply the same principle to the tariff of passengers, and they believe that the latter reform ought to be accomplished by the same procedure and with the same prudence as the former.

The Government also find it impossible to attempt, except by legislative measures, every other partial improvement, the powers which are given them by Art. 10 of the law of the 12th April 1851* being limited to exceptional cases.

It is for this reason that they have postponed until now the creation of special tariffs for the market and suburban trains, and for season tickets;—the addition of third-class carriages to certain express trains;—the reduction of the *minima* of fares;—and of other analogous experiments which it would be useful to make.

I have thought, Gentlemen, that it would not be irrelevant rapidly to survey the different circumstances which have marked the reform of the goods' tariff, and to consider the results obtained.

I hope that these explanations are of such a nature as to justify the vote of confidence which I have the honour of soliciting from the Legislature.

In 1856, in spite of an increase of 61 kilomètres of lines worked, the traffic and the receipts for heavy goods were less by 104,000 tons, and by 303,000 francs, than those of the preceding year.

On the other hand, offers of new transport, but at reduced prices, were made from all parts to the administration. This state of things seemed to indicate a kind of compression of traffic by the high rates.

The administration accepted these offers.

Such was the origin of particular contracts and special tariffs.

The traffic received from this measure a lively impulse, and in spite of the objections on principle, which were made to this system, and which Government have justified, it can be affirmed that it has been profitable to the country as well as to the public treasury. The administration on its part has drawn from it precious elements of information, and an experience which has allowed it to march boldly in the path of progress.

From 1856 to 1860 (four years), the traffic increased by 1,133,000 tons, and the receipts by 3,306,300 francs.

In 1861 the Government introduced the first regular tariff, with reduction according to distance.

It embraced pit-coal, coke, coal-bricks, rough castings, flag stones, building stones, and lime.

The results of this experiment were remarkable.

The traffic rose 11·61 per cent. (427,000 tons). The increase of tonnage of goods favoured by the new tariff attained the enormous proportion of 72·40 per cent.

In 1862 the special tariff became general, that is to say, it was extended to all goods of the third class. A tariff reduced according to distance was also made for the second class, and the tariff, so liberal, was put in force, as were also other secondary measures. The railways were worked under this *régime* during the years 1862–3, and the first five months of 1864.

In spite of these reductions of the tariff and of the intensity of the commercial and industrial crisis, the traffic increased by 621,000 tons, and the receipts by 892,000 francs.

In 1864 still more important reforms were decreed; all goods of the third class passed into a new class at rates greatly reduced; the greater part of second class goods were ranked in the third, and a certain number of products of the first class in the second and third. The *barèmes* of these two latter classes received the complement of reduction according to distance; a reduced tariff was made for *abonnements*, &c. The effect of these measures was to suppress almost the whole of the contracts and special tariffs, the rates of ordinary tariffs being equal to or lower than those of favoured ones.

The results surpassed all expectation.

From June to December the tonnage of heavy goods increased by 525,000 tons, which represents for a period of 12 months a total increase of 900,000 tons. It is equivalent to the mean increase of more than three years together.

As to the receipts, the sudden change of which might have reached 2,000,000 francs, this prodigious development of traffic has maintained them at a normal level.

The increase for the same period, from June to December, has been 578,000 francs, which represents 990,000 francs for an annual period.

It is understood that if the increase of the traffic continues, even in the smallest proportions, after the first annual period, the results in receipts will be much more brilliant, since the product of the excess of traffic will no longer be applied to compensate the reduction on that previously existing.

Let me be allowed to consider the *ensemble* of these measures under the three most interesting aspects:—

1. The rate of the tariffs.
2. The benefit to the public.
3. The result to the treasury (receipts and expense).

The following is a comparison of the tariffs of 1856 and 1864:—

DISTANCES.	1st Class.		2nd Class.		3rd Class.		4th Class.	
	Tariff of 1856.	Tariff of 1864.	Tariff of 1856.	Tariff of 1864.	Tariff of 1856.	Tariff of 1864.	Tariff of 1856.	Tariff of 1864.
Leagues.	fr. c.	fr. c.	fr. c.	fr. c.	fr. c.	fr. c.	fr. c.	fr. c.
5	3 50	3 50	3 0	3 0	2 50	2 50	2 50	2 0
10	6 0	6 0	5 0	5 0	4 0	4 0	4 0	3 0
15	8 50	8 50	7 0	7 0	5 50	5 50	5 50	3 75
20	11 0	11 0	9 0	7 50	7 0	5 75	7 0	4 0
25	13 50	13 50	11 0	8 0	8 50	6 0	8 50	4 25
30	16 0	16 0	13 0	8 50	10 0	6 25	10 0	4 50
35	18 50	18 50	15 0	9 0	11 50	6 50	11 50	4 75
40	21 0	21 0	17 0	9 50	13 0	6 75	13 0	5 0
45	23 50	23 50	19 0	10 0	14 50	7 0	14 50	5 25
50	26 0	26 0	21 0	10 50	16 0	7 25	16 0	5 50

It is essential to remark that the considerable difference between the rates of 1856 and 1864 ought to be increased by all the importance of the changes effected in the classification.

Thus, chalk paid formerly, in the 2nd class, from 3 to 21 francs; now it pays, in the 4th class, from 2 to 5½ francs.

3·50 to 26 francs were paid for beetroot in the 1st class only 2 to 5·50 francs are now paid for it in the 4th class.

Similar reductions, to the extent of 80 per cent. on the prices of 1856, have been made on coal, minerals, cast and

* Art. 10. The minister shall have power to reduce the passenger tariff up to 50 per cent.:—

1. For emigrants and their luggage.
2. For certain other exceptional cases, such as fêtes, &c., which appear likely to produce an increase of receipts.

wrought iron, wood, building materials (stones, bricks, flags, tiles, slates, &c.), potatoes, manure, &c.

What has been the benefit to the public?

The increase of usefulness which the public has gained from the railway from 1856 to 1864 is not only in proportion to the increase of traffic, but also to the lower rate paid.

The traffic has increased in the following proportions:—

	Tonnage.	Augmentation.
1856 - - -	2,545,000	—
1857 - - -	2,783,000	238,000
1858 - - -	3,190,000	407,000
1859 - - -	3,315,000	125,000
1860 - - -	3,678,000	363,000
1861 - - -	4,105,000	427,000
1862 - - -	4,276,000	171,000
1863 - - -	4,479,000	203,000
1864 - - -	5,251,000	772,000

The increase is 706,000 tons, or 106·32 per cent.

The ton carried produced:—

		Public Saving.			
	fr.				fr.
In 1856 - -	4,58				
In 1857 - -	4,34	0,24	5,240 p. c.	-	668,000
In 1858 - -	4,30	0,28	6,113	-	893,000
In 1859 - -	4,26	0,32	6,987	-	1,060,000
In 1860 - -	4,07	0,51	11,125	-	1,876,000
In 1861 - -	4,04	0,54	11,790	-	2,217,000
In 1862 - -	3,84	0,74	16,157	-	3,164,000
In 1863 - -	3,74	0,84	18,340	-	3,762,000
In 1864 - -	3,31	1,27	27,729*	-	6,670,000
			Total	-	fr. 20,310,000

We do not think we shall be contradicted, when we say that an increase of 2,706,000 tons (106⅛ per cent.), and an economy of 20,000,000 francs realized in eight years, the last of which absorbs in itself alone 6,670,000 francs, corresponding to a mean diminution of 28 per cent. in the tariffs, have been a powerful element of prosperity to our commerce, our industry, and our agriculture.

At what price has the public treasury realized these benefits?

From 1856 to 1864 the receipts on the heavy goods have been raised from 10,971,000 francs to 16,738,000 francs, *i.e.*, 5,767,000 francs, or 52½ per cent.

The other elements of traffic, passengers, light goods, *finances*, &c., have returned in 1864, 16,940,000 francs, against 12,183,000 francs in 1856.

The increase of the two kinds of traffic gives thus a total of 10,524,000 francs, or 31·25 per cent. excess above its first estimation.

The working expenses were 14,811,000 francs in 1856.

They were raised in 1864 to 18,000,000 francs, *i.e.*, 3,189,000 francs, or 21½ per cent. more.

Let us add to these expenses all the interest of capital expended from 1856 to 1864, though the greater part of this outlay was indispensable and quite independent of the alteration of the tariffs.

This outlay on the 31st of December last amounted to 31,078,000 francs, the interest at 5 per cent. being 1,554,000 francs.

The total increase of the cost of working and the interest of capital thus amounts to 4,743,000 francs, *i.e.*, to say, to an amount less by 5,781,000 francs than the excess of ordinary traffic, and less by 1,024,000 francs even than the excess of the special traffic of heavy goods.

In short, since 1856, that is to say, in eight years,—

1. The charges on goods have been lowered on an average by 28 per cent.
2. The public have despatched 2,706,000 tons more, while they have economized more than 20,000,000 francs on the cost of carriage.
3. The public treasury has realized 5,781,000 francs more, after having paid the cost of working and the interest of capital.

Being in this prosperous situation, the Government have asked if the time has not come to turn their attention to the second part of the problem of cheap transport. In other words, whether it is not proper to apply to the service of passengers the principles which have given such satisfactory results to that of goods.

The Government is of opinion that facility and cheapness of travelling (*déplacements*) are in principle as fruitful in benefits to all classes of society as the economical transport of goods can be for the producers and for the consumers.

In what manner should we proceed to attain this desirable result?

I repeat that this is only to be learnt by the attentive study of facts and experience.

The Government cherish the hope that the Legislature, co-operating with their good intentions, will not refuse the powers necessary to arrive at their realisation.

The Minister of Public Works,
Jules Vanderstichelen.

Law Project.

Leopold, King of the Belgians, to all present and to come, greeting:

On the proposition of our Minister of Public Works,

We have decreed and decree:

Our Minister of Public Works will present to the Chamber of Representatives in our name the law project of which the tenor is as follows:—

In derogation of the laws of the 12th of April 1851 and of the 10th of March 1854, Article 1st of the law of the 12th of April 1835, concerning the tolls of the railways of the State, prorogued till the 1st of July 1866, by the law of the 21st of April 1864, is rendered applicable to the tariff of passengers and luggage.

Given at Laeken, 26th of February 1865.

Leopold.

Appendix O.

Statement of Lord Ashtown's Colliery Agent.

April 6, 1865.

The Mineral Traffic of Railways.—Some of the Disadvantages that Senders and Consumers of Minerals have to contend with in consequence of the Regulations of Railway Companies. With some Suggestions for the Removal of Excessive Charges, and the Equalization of Rates on Coal, Coke, and Ironstone.

Having been formerly engaged as a travelling agent for a colliery in the county of Durham, covering a very extensive area of the railway system, and always being engaged in travelling over the Midland Railway from Leeds to Colne, to Derby, Leicester, Birmingham, and all the Midland branches between, also on the South Staffordshire iron-making districts, on the Great Northern Railway as far as Peterborough from Leeds, the London and North-western, and Lancashire and Yorkshire Railways, it will not, I trust, be considered out of place if I venture to submit a few ideas from my own experience connected with my business on the railways I have named, in some of the principal towns of the kingdom, in relation to the facilities afforded for the traffic of coal, coke, and ironstone.

I consider it a matter of the greatest moment to a commercial and manufacturing people, that the raw materials of trade should be free from any *unnecessary* tax.

Now coal and ironstone are not equally distributed by nature over every county. There are some districts where coal may be had at 6*s.* and 8*s.* per ton; in other parts it is 15*s.*, and in other places 25*s.* per ton. To the people who live in the midland, eastern, and southern counties of England the price of coal, so important as a social comfort, and equally so as a steam-producing power, becomes a matter of serious consideration.

In Leeds engine coal is supplied at 3*s.* per ton; at Birmingham a similar quality will be 9*s.*; in the eastern counties it will be 12*s.*

	s. d.		*s. d.*
House coal at Leeds is - - -	6 8	and	8 4
,, at Birmingham - -	15 0	,,	22 0
,, at Cambridge, Ely, Wisbeach, and Norwich -	22 0	,,	24 0

This great disparity in price is the result of, first, the physical geography of the particular places; and, secondly, it is in some cases the effect of railway *monopoly*.

* In reality this should be greater, as the reduction of rate for longer distances had the effect of increasing the mean distance travelled.

The natural difficulty I maintain railways are designed in part to overcome, and Government are acting in the right direction in inquiring how they can be conducted, so as to serve the best interests of the people.

The people who live in the south and eastern counties cannot compete with their countrymen in the north. A brass-founder in Birmingham loses a profit which a brass-founder at Sheffield gains in the very outset of melting his metal in the price of coke; at Leeds the brass-founder can buy his gas coke for the furnace at 5*s.* 6*d* per ton.

At Sheffield - - 8*s.* „
At Birmingham - - 15*s.* „

The iron-worker at Wolverhampton or Dudley or Birmingham cannot supply his puddling or ball furnaces with coal at all comparable with furnace proprietors at Sheffield, Leeds, or Middlesbrough in point of price.

In Leeds the iron works pay from 6*s.* 6*d.* to 10*s.* per ton. In Sheffield about the same. In Birmingham and district from 10*s.* to 14*s.* The result of all this is, that if a manufacturer is to compete in the market, he must have labour cheaper, and reduce wages,—hence strikes; or he must make an inferior quality of article. Now a great deal of this could be made easier for masters and men, if railways in those particular districts were to cheapen rates for coal traffic, so as to open the channels for letting coal go from those districts where it so largely abounds to those parts where it is scarce.

You will find that the rates on the London and North-western in connexion with the South Stafford Railways are not calculated according to distance or mileage, or yet upon the principle that the mineral rates shall be the easiest in those towns where there is the largest mineral traffic. On one occasion I sold coke to an iron firm of some note at Wednesbury; and according to the rates given to me by the London and North-western Railway Company, it was cheaper by 1*s.* 6*d.* about per ton to send it to Birmingham than Great Bridge, although it had to pass there and travel 15 miles beyond to get to Birmingham. In passenger traffic mileage is the rule of calculation. In mineral traffic, here is a fact which shows that it does not enter into account at all. If the company in question could afford to take coke to Birmingham at 5*s.* 7*d.*, it would appear, from a common sense view, they could carry it 15 miles less distance for less money; but such is not the fact.

And now as to ironstone in those districts. The Staffordshire iron district is perhaps the oldest in the country. In many places the ironstone is exhausted, and proprietors have to buy elsewhere. This is done also for mixing purposes, whereby quality of iron is improved. Staffordshire iron makers buy ore from Northamptonshire, Wales, and Leicestershire, and Cumberland. Now Yorkshire ironstone could not be sent there on account of the heavy rate. Some of the best ironstone, Low Moor bed, we have at Leeds, and Staffordshire makers would be glad of it. But railway companies will not reduce their rates, so that it can be sent, or yet find waggons to take it. The railway companies from the North to South Staffordshire object to find waggons for mineral traffic, such as coal and ironstone.

This is one of the greatest hindrances to the advantages which railways ought to confer upon a commercial people; and I maintain that railway companies ought to be bound to find waggon accommodation for every species of traffic at a reasonable price. I know a case where one railway company charge 2*s.* per ton extra for waggons for coke, which is *gross imposition*, about 8*s.* per waggon per journey, besides the carriage.

Another hindrance to public good by railway companies is the preferential advantages some of them give to large proprietors, which is viewed as nothing less than injustice.

The Eastern Counties Railway Company have, for instance, a regulation of this kind: that supposing a rate to March or Ely may be made 3*s.* per ton for coal. If a party can take a train load of coal, say 15 or 20 waggons, the charge will be something like half price per ton, near 1*s.* 6*d.* Now this makes the coal trade a fearful monopoly. It is only great capitalists who can engage in it, for the small coal merchant cannot afford to have a train load of coals; perhaps two or three waggons may be all he can take at once, and for this he has to pay double the price of the large merchant.

It is also important to the interests of the public generally that railway companies should be compelled to provide proper conveniences for loading and unloading mineral traffic. I know a case where, although parties sent their own waggons for coal, the trade could not be continued on account of the unwillingness of the railway company to have the trouble of the loading of the traffic.

I submit these few ideas of difficulties, which I hope the Commissioners appointed will be pleased to accept, and shall be glad to give any further evidence on the matter.

I am, &c.

Agent for Lord Ashtown and Co.,
Gascoigne, Garforth Colliery,
Marsh Lane, Leeds.

Appendix P.

(Irish Inquiry.)

Copy of a Letter from the Chancellor of the Exchequer to the President of this Commission.

11, Carlton House Terrace,
My Lord Duke, April 11, 1865.

Many of the representatives of Ireland in the House of Commons have expressed in Parliament their desire that the examination into the Irish railway system and its operation, which is included in the general inquiry undertaken by the Royal Commission under your Grace's presidency, should not be postponed until after the case of the railways of Great Britain shall have undergone investigation.

Her Majesty's Government are under the impression that the case of the Irish Railways is comparatively simple, and that the facts connected with it might probably be collected at an early period, under the auspices and instructions of the Commission, but without interruption to that course of inquiry into more difficult and complex, as well as more extended, questions upon which the Commission may already have entered; and they accordingly entered into an engagement to bring this matter under the consideration of the Commission.

I have therefore to request that your Grace will be good enough to consult with your colleagues in the Commission upon the question which I have submitted; and I have to express the readiness of Her Majesty's Government to co-operate with the Commission by providing, should it in their judgment be necessary, additional assistance with a view to the more speedy and convenient collection of the information which is desired.

I have the honour to remain,
Your Grace's very obedient
and faithful servant,
(Signed) W. E. Gladstone.

His Grace
The Duke of Devonshire, K.G.,
&c. &c. &c.
Lismore Castle, Lismore.

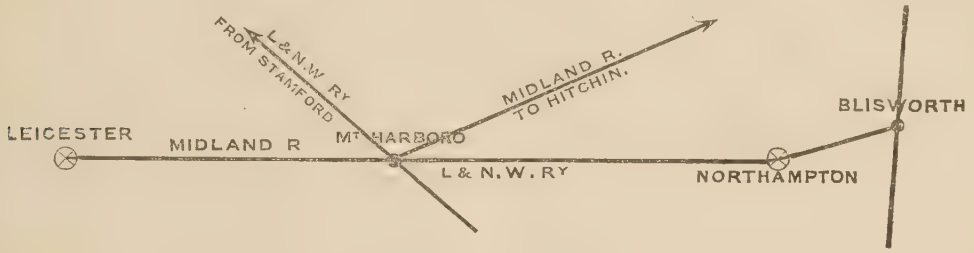
Appendix Q.

Statement by the Rev. James Field as to Want of Correspondence of Trains on different Lines in the Midland Counties.

Oxendon, near Northampton,
April 27, 1865.

Sir,

With reference to my letter of 13th April, asking if the Royal Commission would consider it within their province to notice a statement of inconvenient arrangement of trains as between two important railway companies at a point of junction, I have to acknowledge your reply of April 26th, stating that they would receive such statement.



Leicester and Northampton, very populous towns, are connected by the Midland (Leicester and Hitchin) and London and North-western (Northampton, Market Harborough, and Stamford) Railways joining at Market Harborough.

UP.

Passengers from Leicester, &c. to Northampton or places between Market Harborough and Northampton, leaving Leicester at 7.10 a.m. arrive at Market Harborough at 7.38, or 10 minutes too late for the 7.28 a.m. train to Northampton.

Those leaving Leicester at 9.45 a.m. arrive at Market Harborough at 10.23 a.m., or 23 minutes too late for the 10 a.m. train from Market Harborough to Northampton.

Passengers from Leicester at 1.40 p.m., due at Market Harborough at 2.10, can proceed in 45 minutes by the 2.55 London and North-western train to Northampton.

Passengers leaving Leicester at 4.35 p.m., due Market Harborough at 5.14, can proceed to Northampton in 41 minutes by the 5.55 p.m. train of London and North-western Railway.

Thus, by the first and second trains they are studiously thrown out altogether from Northampton and places on London and North-western Branch.

DOWN.

Passengers from Northampton, &c. at 8.55 a.m. reach Market Harborough at 9.42, and proceed to Leicester after 38 minutes, by the 10.20 Midland train.

Those leaving Northampton at 1.15 p.m. reach Market Harborough at 2.10, just 42 minutes *after* the Midland train at 1.28 p.m. has left, and cannot proceed till 6.29 p.m., *i.e.*, 4 h. 19 m. after arrival. They may (if they are aware of it) be equally forwarded on their journey by leaving Northampton at 4.40 p.m. reaching Market Harborough at 5.32, and proceeding to Leicester (as above) at 6.29 p.m., *i.e.*, in 57 minutes.

Passengers at 7.55 p.m. from Northampton reach Market Harborough at 8.40, and proceed to Leicester by 9.46 p.m. train of Midland Company (or in 1h. 6m.).

Other Routes.

The Midland Railway Company it is believed have powers to run from Wellingborough (on their Leicester and Hitchin line) to Northampton; but passengers by this route have to proceed 1½ miles by omnibus, &c. from the Midland to the London and North-western station at Wellingborough, although a line of junction has been formed several years.

The remaining route between Leicester and Northampton is by Midland Company to Rugby, thence (when there is a train) to Blisworth on the London and North-western Railway, and from Blisworth to Northampton by the first trip train that is going.

The two routes, viâ Wellingborough for the one, and viâ Rugby and Blisworth for the other, are so far round that I do not attempt to trace the connexion of the trains, as I know they are very inconvenient.

From Leicester, with probably 80,000 inhabitants, to Northampton with 40,000, the distance is about 33 miles, viz., 16 to Market Harborough, and 17 thence to Northampton, along the coach road, which passes through several very populous villages, as Oadby, Kibworth, Market Harborough, with almost 3,000 people, Brixworth, Kingsthorpe, and *near* several others equally important.

Before railways were developed, coaches performed the journey with great convenience and without delay in less time than, except by certain of the trains, is now occupied.

Results of past Application.—Observation.

The mode in which the travelling public are thrown out, as above, at Market Harborough, was brought by me to the notice of both companies in 1864. The London and North-western Company sent an officer to confer with me on the matter, who expressed his anxious desire to secure a better communication. The Midland Company informed me that theirs being a main line, but the London and North-western being only a branch, it was not for themselves but for the London and North-western Railway Company to arrange a different service of trains, and have taken no further steps.

Up to this month of April 1865, no different arrangement appears to have been made. The managers have great difficulties, owing to the London and North-western branch connecting with the main line at Blisworth. Nevertheless where they cannot see their way to a different result, it seems the prevention of the very serious inconvenience to the public as above pointed out is a proper subject for Parliamentary interference.

And having observed the appointment of a Commission on the subject generally, I have ventured to offer the preceding statement of facts, but am not competent to offer a solution of the difficulty, further than that the London and North-western should have running powers, if they do not already possess them, from Market Harborough to Leicester.

I beg to remain,
Your obedient servant,
Rev. James W. Field.

Appendix R.

(Irish Inquiry.)

Statement of Mr. G. W. Shannon as to Obstructive Policy followed by Directors of Irish Railways.

Dublin, 13, Leeson Park,
May 5, 1865.

Sir,

Referring to your letter of 26th ultimo, I have now respectfully to submit for consideration of your Commissioners the following observations bearing upon the attainment of more extended and economical traffic by the Irish railway system, but in doing so details must be necessarily omitted, and only the results stated, lest the views of an individual shareholder may be unduly obtruded on the Commissioners' attention.

An Act passed in the year 1847 which contained powers for amalgamating the lines of railway between the city of Belfast, the distance being 113 miles, under upwards of 30 directors, but no action was taken on it by the directors of the respective companies, nor was any effort made to consolidate their service until the year 1863, when the shareholders raised the question and began to take a more active part in the management of their property, the discovery of the Act of 1847 followed, and its suppression for 17 years, but appeals to the directors to carry out the intention of the Legislature, to save working expenses, and to open up the resources of the northern districts were met by opposition from all the boards, to whose half-yearly reports for the years 1863, 1864, and 1865 on this subject the Commissioners are for convenience referred in the Appendix.

A Bill was, in December 1864, promoted by some of the dissentient shareholders, which was discussed at the general meetings in Dublin on 24th and 28th February 1865, when the directors of the Dublin and Drogheda and the Dublin and Belfast Junction Companies caused the Bill to be withdrawn, but finding the feeling of the shareholders strongly expressed, the directors undertook at length to carry out amalgamation themselves, if left in their hands.

At a general meeting held in Belfast on the 15th February 1865, by the Ulster Railway Company, a resolution was carried by the shareholders against the directors and in favour of amalgamation.

Looking, therefore, to the facts that for 18 years the powers given for amalgamating the lines have lain dormant, and the intentions of the Legislature have been frustrated, that notwithstanding its manifest advantages no effort of the shareholders has proved successful to accomplish it, I consider that to Government intervention alone can we look for this indispensable preliminary to large savings and developed trade, with much higher rates of dividend to the shareholders.

In the management of the Midland Railway (Dublin and Galway) I am more directly interested by reason of the propinquity of my stepson's estates in the county of Westmeath and King's county, and I would invite attention to the management as evidence of how far a large existing traffic and the germs of very profitable carrying trade may be jeopardised.

The dividend paid by the board was five per cent. for some years, which induced investments, but in the year 1864 it was surmised by some of the shareholders that the management was improvident, and the accounts having been examined, it was conceived necessary to appeal to the proprietary on the subject, a committee of whom sat for several days prior to the general meeting of September 1864, and under the able direction of Lord Clonbrook, they were so well supported that after a contest with the directors' a section of them presented for re-election were removed, and their report was rejected by the general meeting.

At the next general meeting a two per cent. dividend was offered instead of four per cent. of the preceding half year, and the chairman admitted that no dividend was justified, that the working expenses for the three preceding years had averaged 51 per cent., and that there was no fund reserved for renewals, although such was regularly stated in the reports annually presented; a committee of shareholders was thereupon moved by Lord Castlemaine, and only postponed to the next meeting pending the creation of 300,000*l.* of preference stock: the same course will probably be taken at the next September meeting as at the last, but from the expense and trouble thus entailed on the shareholders to check the management of the line, some intervention by Government would appear likely to prove salutary.

I take no exception to the management of the Great Southern and Western Railway Line (Dublin and Cork), nor am I aware that other proprietors do so, although the third-class service is rather limited; but the traffic accommodation provided by it and its branches is not at all what such extensive districts require as are traversed by them.

Having thus briefly touched on the condition of the lines in which I am interested, I have to add that the interests directly affected, and the nature of the questions which are indirectly influenced by the scope of the pending inquiry, render it scarcely subordinate in moment to any which has attracted the attention of Government in Ireland.

I have, &c.
(Signed) George Wm. Shannon.

William Pole, Esq.,
Secretary,
Royal Commission on Railways,
House of Lords, Westminster.

APPENDIX.

(Northern Lines.)

No. 1. 1847. Act enabling the companies to amalgamate, &c.

No. 2. 1863, December 31st. Report of the Dublin and Belfast Junction directors states that—"Since the last half-yearly meeting amalgamation has engaged the attention of the directors, and negotiations have taken place between the boards of the three companies, which do not, they regret to say, indicate any prospect of accomplishing this object."

No. 3. 1864, June 30th. Report of same states that —"Amalgamation of the three companies would not have the assent of the Dublin and Drogheda and Ulster Companies, and that the subject of amalgamation of the three companies or any of them should not be pressed."

No. 4. 1864, June 30th. Report of the Dublin and Drogheda directors states that—"In pursuance of a resolution of the shareholders for amalgamation two meetings took place with the directors of the Belfast Junction Company, but without result."

No. 5. 1864, December 23rd. A Bill promoted by shareholders to oblige the directors of the Dublin and Drogheda and the Dublin and Belfast Junction Companies to amalgamate.

No. 6. 1865, January 6th. Circular letter of the Dublin and Drogheda directors objecting to amalgamation unless the directors of the Ulster Company should agree.

No. 7. 1865, February 10th. Report of the Dublin and Drogheda directors agreeing to amalgamate with the Belfast Junction Company alone.

No. 8. 1865, February 18th. Report of the Dublin and Belfast Junction directors agreeing to the amalgamation with the Dublin and Drogheda Company alone.

No. 9. 1865, February 15th. Report of the general meeting of the Ulster Company and of resolution carried for amalgamation of the three companies.

No. 10. 1865, January. Westminster Review and article on amalgamation of Irish northern lines.

(Midland Railway.)

No. 11. 1864, September 22nd. Report of the directors states 12,000*l.* reserved fund and four per cent. dividend.

No. 12. 1864, September. Circular letter of the shareholders to organize opposition to the directors, and (the Honourable Captain Gough in the chair) resolution passed "that the management of the Midland Railway has been attended with injurious results to the interests of the shareholders."

No. 13. Report of the general meeting.

No. 14. 1865, March 23rd. Report of the directors.

No. 15. Report of the general meeting.

APPENDIX S.

STATEMENT of Mr. JOHN BULLAR as to want of RAILWAY ACCOMMODATION at PUTNEY.*

DEAR CAPTAIN GALTON, May 12, 1865.

I HAVE lived here 16 years, and during that time the traffic at the railway station here has increased greatly, probably sixteenfold.

Until recently I could have heavy goods delivered and taken up at the station, but now, when the public necessity for such accommodation is far greater than it was a few years ago, the railway company refuse it, and all heavy goods must be carted from either Nine Elms or Barnes.

I had up a ton of hay from the Bishopstoke station last week. The company invoiced it to Putney, but when it arrived at Nine Elms they gave me notice that it was lying there at my risk and charge. They charged me 18*s.* 9*d.* as for a ton and a half. The station master here said that it would be cheaper for me to have it carted from Nine Elms than sent to Barnes and carted thence, and I therefore sent a cart for it. They had added 2*s.* 1*d.* to the 18*s.* 9*d.*, and because the carter had only 18*s.* 9*d.* he had to return without the hay, and I had to send him the next day for it.

To get one ton of hay from Bishopstoke to Putney cost me 1*l.* 17*s.* 10*d.*,—80 miles.

This is a sample of the way in which the South-western Company treat those who are at their mercy.

Although they invoiced the hay to Putney, they would not deliver it there, and I should have had to pay two rates and cartage from Barnes if I had not carted from Nine Elms.

I am told that they refuse to do carting from Barnes, although they invoice to Putney.

I have already suggested to you that a railway company should be bound to book through over their whole system.

May I now suggest that, where there is a sufficient population near a station, the company should be bound to have accommodation there for goods traffic as well as for passengers,—say a population of 5,000 within a radius of two miles from the station.

It was not till last year that the company made any attempt to give the necessary accommodation for passengers here which the increase of the traffic demanded, and what we now have is very scanty.

For years we had been memorializing them in vain.

Would it not be right to confer on the Board of Trade authority to require an increase of station accommodation when they are called on by passengers to interfere, and are satisfied that the increase is needed?

Hundreds of times was it lamented here that the Board of Trade had no authority to interfere.

Yours sincerely,

Captain Galton, F.R.S., &c. &c. (Signed) JOHN BULLAR.

APPENDIX T.

STATEMENT from the SUPERINTENDENT of the BIRKENHEAD DOCKS, as to the practice of RAILWAY COMPANIES giving WAREHOUSE ROOM free of rent.

Dock Warehouses, Birkenhead,

SIR, 13th May 1865.

UPON reading the summary of Her Majesty's commands to the Commission on Railways, see "Times," 5th April last, it occurs to me that, with reference to paragraph No. 2, a few observations may respectfully be submitted.

I have long observed a practice growing up at the Birkenhead stations of the Great Western and London and North-western Railway Companies of giving *warehouse room, free of rent, to large quantities of goods*, with a view to secure transit of the same over their respective lines of rail, whenever the delivery for consumption in the interior may take place.

It has this unfair effect, that goods may lie in their warehouses for many months, involving an expenditure by the company for rent, extra porterage, and other terminal work; and when conveyed by rail ultimately, say to Manchester or other destination, these goods are charged no more than others, which are landed and loaded off ex ship, or are carted to the station, loaded off direct, and cost the carrying company nothing for rent, extra porterage, &c. This may not be thought of sufficient importance to be brought in evidence before Her Majesty's Commissioners, but it is unjust, inasmuch as the non-recipients as well as the recipients of a great boon are made to pay alike, and the former are taxed for the benefit of the latter.

I remain, &c.

To William Pole, Esq., Secretary, Royal Commission on Railways. W. H. SLOMAN, Superintendent.

APPENDIX U.

(IRISH RAILWAYS.)

REPORT of the COMMITTEE of the CHAMBER OF COMMERCE of the City of WATERFORD appointed to investigate into the present Working of the Railways to and from Waterford, and to bring the Result of their Inquiries before the Notice of the Royal Commissioners on Railways sitting in London.

YOUR Committee considers that the railway communications of Ireland are generally very defective, and that the interchange of traffic is much obstructed, and the convenience of the public is not sufficiently considered in the arrangements. The only parts of the country well served are those commanded by the lines running directly into Dublin. The interference of Parliament to secure a proper development and extension of the railway system is much required, and is essential to the well-being of the country.

The non-existence of railway communication between the north and south through the midland districts of Ireland is much felt, and attempts have been made from time to time to supply the want by parties interested therein, whose efforts have only very lately been partially successful, in consequence of the decided opposition given by existing railway companies to the bills sought for that purpose.

The absence also of due co-operation between the railways is very injurious to the trading and travelling public, by withholding from them those facilities to which they are fairly entitled. For instance, although the distance between Waterford and Dublin is only 112 miles, in consequence of the want of harmonious working between the Great Southern and Western and the Waterford and Kilkenny railways, the citizens of Waterford have no daily return communication with the metropolis, and we trust that the Royal Commissioners will see fit to recommend such arrangements as will ensure this required accommodation.

Furthermore, third-class passengers can only reach Dublin by leaving Waterford at 7.30 a.m., remaining in Kilkenny from 9.15 a.m. till 6.40 p.m., and not arriving in Dublin till 10.10 at night, thus occupying nearly 15 hours, and, when returning, must necessarily stop one night at Kilkenny (Sundays excepted, when a delay of 5½ hours

* See also Appendix DR.

occurs there), thus practically defeating the wise provisions of the Legislature relative to third-class passengers.

Another great inconvenience suffered by the public of the south of Ireland arises from defective arrangements at the Limerick junction, where passengers are delayed a considerable time before they can pursue their journey to the respective stations they are booked for, as will appear by the following memorandum.

Up Trains from Waterford viâ Limerick Junction to Dublin and intermediate Stations.

Leaving Waterford at - -	6.0 AM	9.45 AM	2.45 PM
Arrives at Limerick junction -	8.35 AM	12.5 PM	5.15 PM
Leaves junction at - - -	10.34 AM	1.57 PM	5.17 PM
	Delay—2 hours.	Delay—1 h. 52 m.	No delay.

Trains from Cork to Waterford.

Leaving Cork at -	8.0 AM	11.40 AM	2.45 PM	5.30 PM	10.10 PM
Arrives at junction -	10.34 AM	1.47 PM	4.57 PM	8.5 PM	12.8 AM
Leaves junction -	12.22 PM	5.25 PM	5.25 PM	12.15 AM	12.15 AM
	Delay—1.4 8m.	Delay—3 h. 38 m.	Delay—28 min.	Delay—4 h. 10 m.	

The Committee also considers that the postal arrangements are very unsatisfactory; time is most unnecessarily wasted on the railways, as by an acceleration of the trains from the Kildare junction to Waterford to a speed equal to that of those from that place to Cork, the mails would reach Waterford at 12.20 p.m., and need not be despatched till 1.50 p.m., the advantages of which to the traders of this city would be very great.

This Committee further considers that some steps might be taken by Government to benefit Ireland through the railway system, as a very effectual mode of developing the resources of the country, and we trust that the Royal Commissioners will especially turn their attention to this branch of the subject of their inquiries, and, in default of private speculation, that they suggest that Government might take steps to make such lines of railway as are essential to open up large and important districts, and to fill up such links of communication as are now incomplete.

Your Committee also wish to observe that a large amount of the capital of this country has become locked up in original railway securities, which have been rendered unprofitable owing to the large rate of interest required to be paid on preference shares and on debenture stock, and they would therefore respectfully recommend that Government should make to such railways as can show good and sufficient security permanent loans at a rate of interest not exceeding 3½ per cent. of sufficient amount to enable them to pay off their present bonded debts and preference shares.

The proprietary would thus be benefited to a very large extent, and Government would thereby obtain such right of control as would enable them to insist on proper facilities being afforded to the public.

All the foregoing is respectfully submitted to the Royal Commissioners on Railways by the Committee of the Chamber of Commerce of the city of Waterford appointed for such purpose.

(Signed) Samuel Harris,
President of the Chamber of Commerce and Chairman of the Committee.

(Signed) George Gibson,
Waterford, 15th May 1865. Secretary.

Appendix X.

Statement of Messrs. James and Frederick Howard, Britannia Iron Works, Bedford as to Irregularities of Rates and other Railway Grievances.—22 May 1865.

Third-class rates from Bedford to various Stations, as compared with those to other Stations at similar Distances.

In the instances marked thus * *the discrepancies are very great.*

The Junction of the Great Northern Railway and London and North-western Railway at Sandy.

The best and almost the only route from Bedford to Huntingdonshire, Lincolnshire, Peterborough, &c., is by London and North-western Railway to Sandy, and thence by Great Northern Railway.

Previous to the opening of the Bedford and Cambridge Railway, passengers from Bedford travelled by Midland to Hitchin, and thence by Great Northern Railway. As the latter company have discontinued stopping several of their trains at Hitchin, the route is not now practicable.

The following are the times of arrival and departure of the two companies' trains at Sandy Junction:—

Trains from Bedford to Sandy.	Down Great Northern Trains leave Sandy.	Remarks.
8.28 a.m.	8.28 a.m.	No time allowed for changing and rebooking.
10.42 a.m.	12.42 p.m.	Wait two hours.
1.29 p.m.	3.2 p.m.	Wait one hour and a half.
3.46 p.m.	6.42 p.m.	London and North-western train at 6.55 arrives 13 minutes too late. Wait three hours if arrive by 3.46 train.
6.55 p.m.	10.0 p.m.	Wait three hours.
9.11 a.m.	9.11 a.m.	No time allowed for changing and rebooking.
10.45 a.m.	10.42 a.m.	Leaves 3 minutes before the Great Northern train arrives: must wait 3 hours 40 minutes for next train.
1.50 p.m.	2.25 p.m.	Wait 35 minutes.
3.23 p.m.	4.7 p.m.	Wait 44 minutes.
7.40 p.m.	6.57 p.m.	London and North-western train leaves 43 minutes before Great Northern train arrives, and no other train same night.

Neither passengers nor parcels can be booked through to Great Northern stations, all having to rebook at Sandy. It not unfrequently happens that with the first morning trains, the only trains which profess to meet each other, one has just started when the other arrives.

The goods traffic by same route is booked through, and well conducted.

Oxford Junction of London and North-western and Great Western Railways.

One of the principal reasons urged upon the Committee of the House of Lords and House of Commons at the time the Bedford and Cambridge Railway Act was applied for, was that the line would prove a link between the West of England and the Eastern Counties.

This line has now been opened three years, yet to this day passengers cannot book through from Bedford to Bristol, or any Great Western station west of Didcot, or vice versâ, nor can a third-class passenger travel through without stopping the night at Oxford.

The trains are so arranged that only, if punctual in arrival, can an experienced traveller succeed in catching the one supposed to correspond at Oxford, and it often saves time to go viâ London, an extra distance of 46 miles.

Strangers travelling by this route are often disappointed, and as no through tickets are issued, no redress whatever can be obtained from the companies.

For Worcester and Hereford, for the same reasons, the best practicable route from Bedford is viâ Birmingham, although viâ Oxford is 12 miles shorter.

Previous to the amalgamation of the West Midland with the Great Western Railway, passengers could be conveyed through to Worcester from Bletchley without change, but this has now been discontinued.

Railway Expenses.

To keep traffic on their own lines railway companies convey goods unnecessarily long distances to their destination, and the expenses are thus increased.

Thus:—Implements consigned from Bedford to Southall, Great Western Railway, 10 miles from Paddington, by London and North-western Railway are conveyed viâ Oxford and Reading, 102 miles, the distance viâ Willesden being about 70 miles. If they are sent by Midland Railway to the same station, they are carried viâ Leicester, Birmingham, Oxford, and Reading, a distance of 206 miles, while the distance viâ King's Cross is only 57.

Again, to Pontypool is 163 miles viâ Yarnton. Goods handed to the London and North-western Railway are conveyed viâ Stafford and Shrewsbury, a distance of 215 miles.

Through Rates for Goods to South-eastern Stations.

Through rates are in force between Bedford and all the principal goods stations on the South-eastern Railway.

To the following, however, which are all goods stations, but of minor importance, the South-eastern Railway Company decline to receive through invoices, even if charged at the rates of the next station beyond, and our implements consequently have to be carted across London, often to their great damage and delay, and they have to be re-invoiced at Bricklayers' Arms, causing great inconvenience to all parties in the accounts.

Merstham,	Betchworth,	Chillworth,
Sandhurst,	Godstone,	Edenbridge,
Penshurst,	Wadhurst,	Ticehurst Road,
Etchingham,	Battle,	Paddock Wood,
Yalding,	Wateringbury,	East Farleigh,
Marden,	Pluckley,	Ham Street,
Appledore,	Wye,	Sturry,
Grove Ferry,	Minster,	Smeeth,
Hythe,	Lewisham,	Blackheath,
Abbey Wood,	Erith,	Northfleet,
Higham,	Snodland,	Aylesford.

We have applied, through the Midland and London and North-western Companies, more than once for through rates to these stations, but the South-eastern Company decline to allow goods to be invoiced through to them, we suppose because they would have to pay the small fee which would then be charged by the Railway Clearing House.

Inconvenience of Two or more Passenger Stations in One Town.

Great inconvenience is felt at Bedford by the Midland Station being placed considerably to the north of the town, and the North-western considerably to the south.

No reason existed for these separate stations, as the Midland lines crossed the London and North-western line close to the then existing London and North-western Station.

The Midland having a separate station arose from a quarrel between the engineers of the respective companies, and the public have thereby been greatly inconvenienced.

On the opening of the Bedford and Cambridge line we endeavoured, in conjunction with Mr. Whitbread, to get the London and North-western and Midland Companies to join in the erection of a joint station.

The argument used by the London and North-western Company against this arrangement was that passengers travelling from Cambridge to Leicester, Derby, Manchester, &c., would leave their line at Bedford and travel by the Midland line to their destination, as by an agreement with the two companies they were bound to book them by the nearest route; but this argument did not extend to places where passengers would have to change stations.

We would suggest that, in future, railway companies, coming to a town where a station already exists, should be compelled to run their passenger trains into the existing station, or an adjoining one, except it could be shown that such a course was impossible.

Appendix Y.

Statement of Mr. John Miley in regard to the Emission of Smoke from Locomotives.

72, New Bond Street, W.,
May 22nd, 1865.

Sir,

As the Royal Commission for inquiring into the management of the Railways of the United Kingdom is now sitting, I beg through you to call the attention of the Royal Commission to a custom which has now become prevalent with nearly all railway companies, viz.: that of burning coal instead of coke in locomotive engines, and to the present unsatisfactory state of the law in regard to the emission of smoke from locomotives consequent upon this custom.

Living about 150 yards from the western end of the Primrose Hill tunnel of the London and North-western Railway, I was induced, in consequence of the annoyance to which I was subjected from the emission of dense smoke from the tunnel, and after several ineffectual representations to the company, to take out a summons against them for contravention of the 114th clause of "The Railway Clauses Consolidation Act, 1845," which enacts, that "Every locomotive steam engine to be used on the railway shall, if it "uses coal or other similar fuel emitting smoke, be constructed on the principle of consuming and so as to "consume its own smoke; and if any engine be not so "constructed the company or party using such engine "shall forfeit Five Pounds for every day during which "such engine shall be used on the railway."

But I found that this clause is practically inoperative. I proved the emission of smoke from the locomotive complained of, but the company on their part proved by their engineer that it was constructed to consume its own smoke and their solicitor submitted to the magistrate an opinion of a late judge (Mr. Justice Hill, I believe) in which he held that provided the company could prove that the engine was so constructed, they would not be liable to the penalty even if, through the neglect of their officers, the smoke was not consumed.

The summons was consequently dismissed, and all others that have been taken out against the company have met with the same fate, for in no case has a conviction been obtained. Under the provisions of the Act it is competent to appeal to the Quarter Sessions, but the high legal authority already quoted would probably guide the decision of the county, as it has already done that of the stipendiary magistrates, while the great cost of a final appeal would preclude the further prosecution of a case by private individuals.

I need hardly point out the importance of the question with regard to the health of towns, more especially of the metropolis. I noticed on one occasion dense volumes of smoke issuing from the end of the Primrose Hill tunnel for 25 minutes (timed by a watch) after the exit of a train, and have frequently detected the peculiar smell of railway smoke at a distance of several hundred yards from the line —this, too, proceeding from *one* line. In the course of two or three years, there will probably be four or five lines of railway in that neighbourhood, and the extent of the evil will necessarily be quadrupled. In and around London the multiplication of railways is everywhere similarly observable, and the nuisance, now confined to comparatively narrow limits, will soon assume proportions that will necessitate some action of the legislature; for it is most anomalous that, while so much is being expended on the purification of the metropolis and the improvement of the public health, and steam shipping and other associations are compelled under penalties to consume their smoke, the railway companies should be enabled to avoid all liability by a mere quibble of the law.

I am, Sir,
Your obedient servant,
John Miley.

To W. Pole, Esq.,
Secretary to the Royal Commission on Railways,
Parliament House, S.W.

Appendix Z.

Memorandum upon Railway Fares from Mr. John Patterson, of Liverpool.

Witnesses from Liverpool, and agents upon an opposition to "The London and North-western Railway Company Additional Powers Bill," when remedy was refused *because a Royal Commission was sitting*, paid in railway fares this month 42*l.*, having been carried 4,800 miles by the London and North-western Company's Railway.

Had they resided in Belfast the same company would have charged them 30*l.*, and carried them 8,400 miles.

In the one case they are charged $2\frac{1}{10}d.$ per mile, in the other they would be charged 0·85*d.* per mile.

The latter rate proves to be remunerative.

The former deprives of, or renders more expensive, the resort of Her Majesty's subjects to the Courts of Law and to Parliament, and in this specific case has burdened the Liverpool complainants with a tax of 21*l.* (out of 42*l.*) *paid to the party of whom they complain*, before getting a hearing.

Householders and tradesmen of Liverpool complaining of the Gas Company, &c., are similarly overtaxed, but not, in the same way, for the benefit of the body as to whom they complain.

John Patterson.

Liverpool, 24th May 1865.

Appendix AB.

Table showing, for the Railways in Ireland,—

1. The Capital authorized;
2. The Capital raised on Ordinary Shares, Preference Shares, Debenture Stock and Loans, upon the 31st December of the Years 1861, 1862, 1863, and 1864 respectively;

And as regards the Lines opened,—

3. The Receipts from Traffic and the Working Expenses during the Years 1861, 1862, 1863, and 1864 respectively;
4. The Interest on Preference and Guaranteed Shares and Debenture Stock, and on Loans calculated on the Amounts paid up on 31st December in each of those years; and
5. The Proportion per cent. which the Surplus Income bears to the Ordinary Share Capital, and the Proportion per cent. which the Net Receipts bear to Total Capital.

Name of Railway Company.	Year.	Miles long.	Capital authorized.	Total Capital raised on 31st Dec. in each Year, from Returns furnished to Parliament.				Receipts from Traffic during the Year, as furnished by the Railway Companies to the Board of Trade.	Working Expenses during the Year, from the half-yearly Statements of the Companies.	Preferential Charges, calculated on the Amount of Preference and Loan Capital standing on 31st Dec. in each Year, from Returns furnished to Parliament.			Total of Working and Preference Charges.	Amount of Surplus Income or Deficit.	Proportion per Cent. which the Receipts from Traffic, less the Working Expenses during the Year, and the Preference and Guaranteed Charges, and Interest on Loan on 31st Dec., bear to the Ordinary Share Capital raised on 31st Dec.	Proportion per Cent. which the Receipts, less Working Expenses alone, during the Year, bear to Total Capital raised on 31st Dec.
				Ordinary Shares.	Preference and Guaranteed Share and Debenture Stock, including Ordinary Shares guaranteed by other Companies.	Loans.	Total.			Interest on Preference and Guaranteed Shares and Debenture Stock.	Interest on Loans.	Total.

APPENDIX AC.

SUPPLEMENTAL REPORT of the COMMITTEE of the CHAMBER OF COMMERCE of the City of WATERFORD appointed to investigate into the present WORKINGS of the RAILWAYS to and from WATERFORD, and to bring the Result of their INQUIRIES before the NOTICE of the ROYAL COMMISSIONERS on RAILWAYS sitting in LONDON.

YOUR Committee think it advisable to bring under the notice of the Commissioners another matter which ought to be placed on a proper footing.

They allude to the differential rates made by railways with steamers engaged in the cross channel traffic on goods carried by them for traders up the country, thus enabling a through rate to be made, which materially injures traders in the seaport and intermediate towns where such through traffic arrangements do not exist.

Your Committee would, therefore, respectfully suggest that the Commissioners should obtain evidence on this point, or, should they think it needless to do so, should consider the propriety of recommending such regulations as would oblige all similar goods to be carried by railways at a similar rate of charge from one point to another, whether those goods be committed to their care by or for local traders or on through rates from or to other railways or from or to steamers; such charge not to be altered by drawbacks or other means, except under special circumstances to be decided by the Board of Trade.

All the foregoing supplemental report is respectively submitted to the Royal Commissioners on Railways by the Committee of the Chamber of Commerce of the city of Waterford appointed for such purpose.

A. DENNY,
Chairman of Committee.

Geo. Gibson, Secretary,
Waterford, June 9, 1865.

APPENDIX AD.

STATEMENT of MR. JOHN BULLAR as to THROUGH BOOKING.*

Temple, March 29, 1865.

MY DEAR CAPTAIN GALTON,

If your attention has not already been drawn to it in your Railway Commission, let me suggest that every railway company should be bound to make through rates over the whole of their own system. For instance, the South-western Company will not book through from Windsor to Wimbledon, and though they only charge two terminals, they make two rates. This gives them in some cases a long and a short distance instead of one long distance.

Yours, &c.
(Signed) JOHN BULLAR.

Capt. Douglas Galton, F.R.S.,
&c. &c. &c.

APPENDIX AE.

MEMORANDA on FOREIGN RAILWAYS, by Mr. W. K. SULLIVAN.
(*Referred to under Question* 2114.)

THE principal lines of railway in Belgium belonging to the State were completed in 1843. In the year 1844 there were 559 kilomètres, or 347·3 miles, opened, of which 235 kilomètres were double lines and 324 single. The total cost was 144,746,774 francs, being an average of 258,938 francs per kilomètre, or 16,855*l.* per mile. The total receipts in the same year were 11,230,000 francs, or 1,305*l.* per mile, of which 712*l.* per mile were derived from passengers, and 593*l.* from the carriage of goods and miscellaneous sources. About 20 per cent. of the total receipts was derived from the carriage of goods through the Belgian territory from France or Prussia to the Belgian ports, or from the latter to the former. If we deduct this transit or international traffic, the receipts per mile derived from the internal traffic of Belgium itself were 1,032*l.* The total number of passengers in 1844 was 3,382,000, or 10,513 per mile, and the number of tons of goods carried, including transit goods, 520,892 tons, or 1499·5 tons (*metrical*) per mile. The working expenses were 5,765,420 francs, or 670*l.* per mile, being about 51·3 per cent. of the gross receipts. The Belgian State railway system in 1844 might, therefore, be compared with the Great Southern and Western of Ireland in 1864. The number of miles of the Great Southern and Western opened in 1864 was somewhat more than that of the Belgian system in 1864, being 387¼ miles, the gross receipts were 1,127*l.* per mile, which is a little more than the Belgian receipts derived from internal traffic. The number of tons of merchandise per mile carried on the Great Southern and Western line was, however, only 802, while the internal traffic alone of Belgium in 1844 was 1,200 tons per mile. While the Belgian lines carried 10,513 passengers per mile in 1844, the Great Southern and Western carried in 1864 only 2,425. These numbers show that the receipts of the Irish line are derived from passengers travelling long distances at high fares, while in Belgium there existed in 1844 a considerable local traffic.

From 1843 to 1852 the traffic on the Belgian lines increased very rapidly, as the following table shows:—

	1843.	1852.
Passengers -	308,534	4,451,304
Goods - -	368,107 tons.	1,490,284 tons.
Receipts -	9,031,519 francs.	18,639,758 francs.

In ten years the passengers increased 44 per cent., the goods 305 per cent., and the gross receipts 106 per cent. A considerable part of the increase in goods, and consequently of receipts was due to the development of the transit traffic. In 1836 the value of the goods sent through Belgium was estimated at 20,730,000 francs, and in 1857 at 386,566,000 francs, so that in 20 years this trade had increased 1,764 per cent.

The traffic of the Belgian railways appears to have steadily increased up to 1856, during which time there appears to have been no alteration in the fares or goods rates. Indeed by the law of the 12th of April 1851 the power of the Administration to make any such changes was expressly limited to two categories—emigrants and public fêtes, and similar occasions. In 1856, however, the internal traffic received a check, the carriage of heavy goods declined by 104,000 tons, and the receipts by 303,000. It was found that this declension was due to the rates of carriage being too high. The competition in some articles was so close that the rates became prohibitive. To meet the difficulty the Administration entered into contracts with manufacturers to carry certain quantities of goods, and made special rates for such articles as coal, pig iron, &c. Although these measures were very objectionable in principle they relieved trade. In the four years from 1856 to 1860 the traffic increased by 1,133,000 tons, and the receipts by 3,306,300 francs.

The experience gained during these four years led the Belgian Government to modify completely the principle upon which their rates were based. Hitherto the rates increased in the direct proportion of the mileage. This supposes that the expense increases in the same ratio, that is, that it costs fifteen times as much to convey one ton of goods 50 miles as it does to convey it one, which is not the case. The Belgian Government accordingly proposed to reduce the rate for conveyance of goods according as the distance increased. This reform was introduced in 1861, and was applied to coal, coke, or other fuel, pig iron, building and paving stones, and lime. The result of this reform was remarkable; the whole traffic increased by 427,000 tons, or 11·61 per cent., and the receipts by 1,635,000 francs, or 10·93 per cent., while the tonnage of the articles carried at the reduced rates increased by 70·42 per cent.

Goods were classified in Belgium for railway purposes into three categories or classes. The articles for which the special rates above mentioned were made belonged to the third class. In 1862 the special rates were extended to all the articles of the third class, and the principle of reducing the rate in proportion to distance was applied to the second class, and the special rate for transit goods,

* See also Appendix DR.

to which allusion shall be made presently, was applied generally. The results of these modifications during the years 1862, 1863, and the first half of 1864 were very successful, notwithstanding the commercial and industrial crisis brought about by the American war, and which was very severely felt in Belgium. The traffic increased by 621,000 tons, and the receipts by 892,000 francs.

In 1864 a new classification of goods was made; all the articles of the third class were put into a fourth class, and the rates lowered considerably. The greater part of the goods hitherto included in class 2 were transferred to class 3; many articles of class 1 also were transferred to classes 2, 3, and a few even into class 4; and lastly, the rates according to distances, were greatly reduced in classes 2 and 3. The following selections will show the character of the goods included in each class.

1st Class. Coffee, sugar, and other articles usually included under the terms groceries, tobacco, cotton, linen, hempen, woollen, silken, and other woven fabrics, drugs, leather, artistic bronzes, Nuremburg toys, millinery, earthen and glass ware, paper, books, and printed matter generally, &c.

2nd Class. Commercial acids, ammonia, sulphur, alum, bleaching powder, and other chemical products used in large quantities, raw cotton, hemp, flax, jute, &c., flax straw, grain, oil cake, starch, dried fish, bone black, red and white lead, rags, anvils, springs, wheel tires, anchors, nails, iron hollow ware, scythes, raw and hammered steel, pig lead, zinc, window glass in boxes, &c.

3rd Class. Wood of all kinds, except ornamental and dye woods, which belong to class 1, slates, tiles, empty bottles, jars, carboys, &c., rock and sea salt, hay and straw in bundles, cullet or broken glass, fresh or dried chickory roots, millstones, bar iron, tanning bark, &c.

4th Class. Coal and coke, furnace cinder, kelp, zinc and iron ores, barytes, quartz, sand, manganese, marl, lime, gypsum, pyrites, bone black, poudrette, slaughter-house offal, soot and other manures, building stone, paving stones, turf, peat, charcoal, china clay, brick, gravel, bones, oxide of zinc, pig iron, beetroot, beet-root pulp, iron castings, iron pipes, rails, rivets, &c.

Several of the articles included in classes 3 and 4 are only carried at reduced rates when there is a complete waggon load of five tons.

The effect of these important modifications was to do away with the necessity of special rates or contracts, because the new general rates were as low, and in many cases lower, than the special rates. Only two special rates still exist; the first applies to coal, coke, and patent fuel sent to Ostend or Antwerp for exportation by sea; the second applies to armour plates, fine iron plates, locomotives, tenders, and waggons, machines, and tools of iron, iron bridges, iron pillars, ornamental iron castings, axles, wheels and tires, anvils, vices, springs, iron wire, chains, nails, braces, &c. The special rates of the first category are about the same as the general rates for class 4 for long distances, but are somewhat lower for shorter distances. The same observation applies to the second special rate, that is, for long distances they are about the same as the general rate for class 3, and for shorter distances somewhat cheaper. As, however, there are several articles belonging to class 2 to which the second special rate is applicable, that rate has still some advantage over the general rates.

The results of the reforms of 1864 surpassed all expectation. From June to December the tonnage of heavy goods increased by 525,000 tons, which would give for an entire year 900,000 tons, a number which is equivalent to the mean increase of three years. The receipts for the same period increased by 578,000 francs, which would represent for a whole year 990,000 francs.

According to the Minister of Public Works, M. Vanderstichelen, in his speech before the Belgian Parliament on the 7th of March last, the goods traffic on the Belgian State railways has increased since 1856 in the following proportion:—

——	Tons of Merchandise.*	Increase in Tons.
1856	2,545,000	—
1857	2,783,000	238,000
1858	3,190,000	407,000
1859	3,315,000	125,000
1860	3,678,000	363,000
1861	4,105,000	427,000
1862	4,276,000	171,000
1863	4,479,000	203,000
1864	5,251,000	772,000

* Metrical tons = 1,000 kilogrammes; British tons = 1,015 kilogrammes.

It thus appears that in eight years the goods traffic increased by 2,706,000 tons, or 106·32 per cent.

The gain of the public is represented by M. Vanderstichelen as follows:—

——	Total Reduction in Francs.	Per-centage Reduction upon the Fares of 1856.
	Francs.	
1857	668,000	5·240
1858	893,000	6·113
1859	1,060,000	6·987
1860	1,876,000	11·135
1861	2,217,000	11·790
1862	3,164,000	16·157
1863	3,762,000	18·340
1864	6,670,000	27·729
Total -	20,310,000	

There has been consequently a mean abatement of the cost of transport in eight years of nearly 28 per cent., while the abatement in the rates for some articles is as much as 80 per cent. Notwithstanding this great reduction, the receipts for heavy goods rose in eight years, from 1856 to 1864, from 10,971,000 francs to 16,738,000 francs, that is an increase of 5,767,000 francs, or 52½ per cent. The receipts from passengers, parcels, and miscellaneous sources increased from 12,183,000 francs in 1856 to 16,940,000 francs in 1864, or an increase of 4,757,000 francs, or 39 per cent. The total increase of receipts from all sources of traffic was therefore 10,524,000 francs, or an increase of 45·4 per cent.

Let us now see in what proportion the working expenses increased with this increase of traffic. In 1856 the working expenses were 14,811,000 francs, and in 1864 18,000,000 francs, the increase being 3,189,000 francs, or 21½ per cent.; that is, the working expenses only increased in somewhat less than half the ratio of the gross receipts. From 1856 to 1864 the sum of 31,078,000 francs was expended upon the capital account, chiefly on account of work which had nothing to do with the modification of the rates. The interest upon this sum at 5 per cent. would be 1,554,000 francs. The total increase of working expenses, inclusive of this outlay upon permanent works, was 4,743,000; this sum deducted from the gross increase of income leaves the net profit of 5,781,000 upon the whole increase since 1856, or 1,024,000 francs upon the increase of the traffic in goods alone. In a word, not only did the increase of traffic cover the loss from the reduction of rates upon the conveyance of goods, and which in 1864 represented nearly 28 per cent. of the gross receipts, or 6,670,000 francs, but it also yielded the sum of 4,743,000 francs to cover increased working expenses and interest upon capital expended upon permanent works, and left a surplus net revenue of 1,024,000 francs.

The following table enables us to compare the rates of 1856 with the new ones of 1864, and to better understand the reduction in the mileage rate, which is made according to distance:—

Distance in Leagues= 5 Kilomètres.	1st Class. Rate per Ton per Mile.		2nd Class. Rate per Ton per Mile.		3rd Class. Rate per Ton per Mile.		4th Class. Rate per Ton per Mile.	
	1856.	1864.	1856.	1864.	1856.	1864.	1856.	1864.
	d.	*d.*	*d.*	*d.*	*d.*	*d.*	*d.*	*d.*
5 [=15·5 miles]	2·2	2·2	1·88	1·88	1·57	1·57	1·57	1·25
10 [=31 miles]	1·88	1·88	1·56	1·56	1·25	1·25	1·25	0·94
15 [=46·5 miles]	1·78	1·78	1·47	1·47	1·15	1·15	1·15	0·78
20 [=62 miles]	1·73	1·73	1·41	1·17	1·09	0·90	1·09	0·62
25 [=77·6 miles]	1·69	1·69	1·38	1·0	1·06	0·75	1·06	0·52
30 [=93 miles]	1·67	1·67	1·36	0·89	1·04	0·65	1·04	0·46
35 [=108·7 miles]	1·65	1·65	1·34	0·80	1·02	0·57	1·02	0·41
40 [=124·2 miles]	1·64	1·64	1·33	0·74	1·01	0·52	1·01	0·38
45 [=139·77 miles]	1·63	1·63	1·32	0·69	1·0	0·48	1·0	0·35
50 [=155·3 miles]	1·63	1·63	1·32	0·65	1·0	0·44	1·0	0·33

It must be borne in mind that there was not a fourth class in 1856, and that the articles now included in it, as has been mentioned above, were then in the third class, hence the

reason why the column of fourth-class rates for 1856 is the same as that of the third class for 1856. In considering the reductions which have been made in the rates since 1856, it is essential to bear in mind the changes which have been made in the classification. Thus, for example, beet-root was formerly classed in the first class, and paid from 3·50 francs to 26 francs per ton for distances varying between the minimum distance of 5 leagues, or 15½ miles, to 50 leagues, or 155 miles; it is now in the fourth class, and pays for the same distances only from 2 francs to 5·50 francs. Lime, which in 1856 was in the second class, and paid from 3 francs to 21 francs, is now in the fourth class, and pays from 2 francs to 5·50 francs.

By the bill of the 7th of March 1865, Mr. Vanderstichelen proposes to apply the same principle of reduction, according to distance, to passenger fares. M. de Macar, the reporter of the committee on the bill, reported favourably upon the measure, and recommended the chamber to unanimously grant to the Minister of Public Works the vote of confidence which he asked for the reforms which he had effected in railway rates. He also stated that the parcel rates very much required reforming. At present those rates are better than ours, inasmuch as they are based upon the same principle as the postage of letters, namely, of charging the same sum for all distances. Thus, parcels weighing—

	frs.
Under 2 kilogrammes pay for any distance	0·50
Above 2 „ and under 5 kilogrs.	0·75
„ 5 „ „ 10 „	1·00
„ 10 „ at the rate per kilogr. of	0·10

These rates include delivery within three hours after the arrival of the train.

The Belgian Government have also endeavoured to make international contracts upon the principle of reduction according to distance. Rails, bar iron, sheet iron, &c., made at Liège, Charleroi, and other centres of the Belgian iron trade, have always been exported to Switzerland, but previous to 1860 Belgian coal does not appear to have ever been exported to that country. The cost of carriage per ton of coal from Charleroi to Basel, a distance of about 615 kilomètres, was fixed at 37 fr. 80 c., or about 0·95*d.* per ton per mile. It would appear that this rate was prohibitive. By a contract made between the Belgian Government and the directors of the Grand Luxembourg, the Gillaume-Luxembourg, and the French line de l'Est, the rate has, however, been reduced to 31 fr. 80 c., or about 0·80*d.* per ton per mile. By similar contracts the rates for pig iron and rails have been reduced about 27 per cent.

The rates at which transit goods are carried upon the line from the Prussian frontier town of Herbesthal to Antwerp are different from the internal traffic rates which have been described. Up to the year 1863 all goods were charged 1·03 fr. per 100 kilogrammes between the towns just named; but in 1863 the rate was reduced to 0 fr. 63 c. This rate was established upon the basis of 0 fr. 20 c. per ton-league, or 0·04 fr. per ton-kilomètre without distinction of weight or class, or about 0·62*d.* per ton per mile.

The French lines upon which reductions as great as those which have been made in Belgium have been partially tried are,—Paris to Bordeaux, Paris and the Mediterranean, the line de l'Ouest. On the Paris and Bourdeaux line, and the Nord. On the latter, coal is carried at the rate of 3½ centimes per ton per kilomètre. On the Paris and Bourdeaux line plaster of Paris is carried 577 kilomètres at the rate of 0·021 fr. per ton per kilomètre, or about 0·33*d.* per ton per mile. On the Paris and Mediterranean line it is carried from Charenton to Auxerre, 171 kilomètres, at the rate of 0·023 fr. per ton per kilomètre, or about 0·36*d.* per ton per mile. On the line de l'Ouest plaster of Paris, iron ores, &c. are carried from Argenteuil to St. Lô, a distance of 313 kilomètres, at the rate of 0·022 fr. per ton per kilomètre, or about 0·34*d.* per ton per mile.

It may be useful to add here the mean rates per mile at which goods and passengers are conveyed in some of the German States. They are calculated from those given in the Report of the French Railway Commissioners, published in 1863:—

RATES FOR GOODS.

	1st Class.	2nd Class.	3rd Class.
	d.	*d.*	*d.*
Grand Duchy of Baden	2·20	1·67	1·41
Wurtemberg	2·20	1·67	1·09
Bavaria	3·47	3·05	1·09
Austria	3 63	2·68	1·67
Eastern Prussia	2 20	1·67	1·41
Hanover	2·83	2·20	1·09
Rhenish Prussia	2·36	1·67	1·25

The first class comprises manufactured articles generally, colonial products, fish, manufactured tobacco, &c.; the second class, crude metals, ordinary machinery, wine, spirits, raw cotton, &c., leaf tobacco, &c.; the third class, coal, ores, and other minerals, building materials, pig iron, manures, &c.

PASSENGER FARES.

	1st Class.	2nd Class.	3rd Class.	4th Class.
	d.	*d.*	*d.*	*d.*
Grand Duchy of Baden	1·39	0·93	0·59	—
Bavaria	1·33	0·74	0·59	—
Austria	1·83	1·39	0·91	—
Prussia	1·55	1·16	0·77	0·38

It may also be useful to add the following facts taken from the same report, because they show in a striking way that whenever the rates are lowered the traffic increases.

During the ten years between the 1st January 1852 and the 31st December 1861 the number of kilomètre tons (that is, one ton carried one kilomètre) for each kilomètre of railway opened increased from 145,308 per annum to 452,442, and the corresponding receipts from 12,411 francs to 30,060 francs. During the same period the mean rate per ton per kilomètre fell from 0·0854 fr. to 0·0664 fr. Previous to the introduction of railways the mean rate per ton per kilomètre for the carriage of goods was according to M. Marqfoy, 0·249 fr.

During the same period the number of kilomètre passengers (that is, one passenger carried one kilomètre) per kilomètre opened, per annum, increased only from 262,866 to 315,427, and the corresponding receipts from 16,814 francs to 17,980 francs. The mean passenger fare in 1852 was 0·0639 fr. per kilomètre, and in 1861 0·0570 fr. This diminution in the mean fare was, however, entirely due to an increase in the number of second and third class passengers, the rate-fares for each class having remained sensibly constant since the introduction of railways, and are,—

0·10 fr.	per kilomètre for	first class.
0·075 fr.	„ „	second „
0·055 fr.	„ „	third „

These fares scarcely differ from those which were formerly charged by the Messageries for the *Coupé*, *l'Intérieur*, and *la Rotonde*. If we represent the kilomètre goods traffic and the kilomètre passenger traffic in 1852 each by 100, we shall find that while the former rose to 312, the latter only increased to 120. In the same way, while the receipts from goods traffic rose from 100 to 242, the passenger receipts only increased to 107; that is, while the goods traffic, upon which a considerable reduction had been made, increased 142 per cent. the passenger traffic, upon which no reduction was made, increased only 7 per cent. No doubt the goods traffic would have increased even if no change had been made in the rates of carriage; but there can be no doubt that a considerable part of the increase has been due to the reduction of the cost of transport.

APPENDIX AF.

COMMUNICATION from the LORD MAYOR of DUBLIN.

Mansion House,
Dublin, June 19, 1865.

The ROYAL COMMISSIONERS on RAILWAYS.

MY LORDS AND GENTLEMEN,

The attention of the citizens having been called to the communication made from the Commission to our Chamber of Commerce on subject of the present railway rates and charges in this country, I was presented with a requisition from a highly influential portion of the community to convene a public meeting to take into consideration the best mode of aiding the objects of the Royal Commission, and which requisition I deemed it my duty to comply with.

The meeting having been held on the 1st instant, I have the honour to enclose the resolutions passed at it, and beg to call your particular attention to the fifth resolution.

I am now requested by the Committee emanating from the public meeting above referred to and organized as the "Irish Railway Reform Committee," to state for the information of the Commissioners, that they have taken active means to aid the Commission, having held daily meetings in order to obtain and organize evidence, and also addressed circular letters to all the commercial bodies throughout Ireland, calling upon them to furnish evidence of the statements openly made as to the disabilities which surround and depress mercantile dealings, owing to the high rates and charges for goods and passengers on our railways, the same cause tending to retard the development of the resources of the country.

The foregoing action of the Committee has enabled them to furnish evidence to the Royal Commission, and the Committee respectfully submit, on the opposite side, the names and occupations of the gentlemen who are prepared to be examined in favour of a reduction of the railway tariffs, leaving it in the hands of the Commissioners to make such a selection from them as may be essential for the purpose of the inquiry, and I shall be glad if the wishes of the Committee can be assented to.

Permit me, in conclusion, to assure the Commissioners that the subject of railway reform has excited intense interest in this country, it being, in my opinion, and that of the Committee, one of the most important social questions that any Government could entertain, with a view to effect for Ireland (especially) the immense advantages of a cheap and well ordered system of railway transit, and its concomitant results.

I have the honour to remain,
My Lords and Gentlemen,
Your most obedient servant,
JOHN BARRINGTON,
Lord Mayor.

JOHN BARRINGTON (Lord Mayor of Dublin), merchant and manufacturer.
ALEXR. PARKER, wholesale merchant, Dublin.
JOHN GEORGE BOILEAU, do. do.
ALDERMAN J. W. MACKAY (Lord Mayor elect), Dublin, wholesale seed, &c. merchant.
JOHN BAGOT, Esq., Dublin, wholesale wine and tea merchant.
MARCUS GOODBODY, Tullamore, millowner and landowner.
HENRY R. PERRY, Dublin, grain, &c. merchant.
H. J. MACFARLANE, Dublin, Chairmain of the North Dublin Union, and extensive landowner.
ROBERT O'BRIEN, Dublin, cattle salesmaster.
J. D. MELDON, Dublin and Galway, solicitor and extensive landowner, in his own hands.
EDWARD FOX, Dublin, stock and share broker of thirty years' standing, largely interested in railway property.

IRISH RAILWAY REFORM MOVEMENT.

At a highly important and influential meeting, held by requisition, at the Mansion House, Dublin, on Thursday, 1st June instant, in order "to aid the Royal Commission "now sitting in London, and receiving evidence in regard "to the charges, rates, and management of Irish Railway "Companies, and to adopt such measures as may be "deemed advisable for carrying out the principles of the "Railway Act of 1844 (7 & 8 Vict., c. 85.), now about to "come into operation, in such manner as the state of "Ireland so urgently demands."

The Right Hon. the LORD MAYOR in the chair.

It was moved by Francis Codd, Esq.;
Seconded by Alexander Boyle, Esq., and resolved:—

"1st. That it is the opinion of this meeting that no measures would be better calculated to develope the resources of Ireland, and improve the social condition of the Irish people, than one whereby the present fares and railway charges would be reduced to a low and uniform rate, and unity of action be effectually established; provided, however, that any arrangement of the kind shall provide ample protection for the property of railway proprietors."

Moved by Jonathan Pim, Esq.;
Seconded by S. M. Greer, Esq.:

"2nd. That that the General Railway Act of 1844 (7 and 8 Vict. c. 85.), by which the Government is enabled, on certain terms and conditions, to deal with or purchase all railways thereafter to be constructed, presents one method of carrying out the above object."

Moved by Alexander Parker, Esq.;
Seconded by J. G. Boileau, Esq.:

"3rd. That the increased traffic which would be created by a uniform system of low rates, together with the considerable reduction of charges which would be effected by a less oppressive rate of interest on railway debt and by a consolidation of railway management, would, in the opinion of this meeting, more than compensate for any temporary loss arising from reduced rates."

Moved by Professor Sullivan;
Seconded by Edward Fox, Esq., J.P.:

"4th. That Her Majesty's Government having appointed a Royal Commission to institute inquiries with reference to the railway system of Ireland, it behoves the public to afford the Commission every possible assistance and information."

Moved by J. BOYCE, Esq., High Sheriff of the City;
Seconded by JOHN BAGOT, Esq.:

"5th. That the chairman, the secretaries, and the movers and seconders of resolutions, together with such other gentlemen as they may invite to join them, be appointed a committee to carry out the objects of this meeting."

The Lord Mayor was then moved from the chair, and the High Sheriff having been called thereto, on the motion of P. M'Evoy Gartlan, Esq., seconded by Mr. D'Arcy, T.C., the thanks of the meeting were given to his lordship for his kindness in presiding on that occasion.

The following provisional committee was appointed to carry out the objects of the meeting, viz.:—

The Right Hon. the Lord Mayor, Mansion House.
Francis Codd, Esq., Fleet Street.
Alexander Boyle, Esq., College Green, banker.
Jonathan Pim, Esq., 22, William Street.
J. G. Boileau, Esq., Bride Street.
Professor Sullivan, Cecilia Street.
Edward Fox, Esq., J.P., Dame Street.
J. Boyce, Esq., D.L., High Sheriff, 52, Upper Mount Street.
Alexander Parker, Esq., 46, Upper Rathmines.
J. Bagot, Esq., 28, William Street.
John Neville, Esq., C.E., Dundalk.
P. M'E. Gartlan, Esq., Mountjoy Square, East.
Sir John Gray, *Freeman's Journal.*
Alexander M'Clintock, Esq., 2, Rutland Square, West.
J. U. Burke, Esq., Farmers' Club.
Hugh Harris, High Sheriff, Armagh.
Captain Knox, *Irish Times*, Abbey Street.
John Collum, Esq., 40, Sackville Street, and Enniskillen.
Edward Pardon, Esq., T.C., *Farmers' Gazette.*
M. R. Ryan, Mayor of Limerick.
Henry Maunsell, Esq., M.D., *Evening Mail.*
Michael Dwyer, Esq., *Evening Post.*
H. J. MacFarlane, Esq., Hunstown, Mulhuddart.
Archibald M'Comas, Esq., Exchequer Street.
Alderman J. W. Mackay, Lord Mayor Elect.
Henry Robert Perry (Perry, Pim, & Co.), Burgh Quay.

The Committee having held a meeting at the Chamber of Commerce, on Wednesday, the 7th inst., the following resolution was passed:—

"That, for the purpose of defraying the necessary expenses incidental to the movement, a subscription list be opened, to which the public is invited to subscribe, in sums not exceeding 1*l.* each, to enable the Committee to promote the objects contemplated, and that public attention be called to the vast advantages of inducing the Government to interfere in whatever manner may seem best to them, to give the public the advantage of cheap, safe, and punctual transit for persons, goods, and cattle."

The following were appointed the Bankers to the movement:—

National Bank, Dublin, and its Branches;
Royal Bank, Forster Place.
Messrs. Boyle, Low, and Murray, College Green.

Alexander Boyle, Edward Fox, and John George Boileau, Esqrs., were appointed Treasurers.

E. BULLEN,
S. M. GREER, } Honorary Secretaries.
R. JACKSON, Assist. Sec.

Commercial Buildings,
12th June 1865.

IRISH RAILWAY REFORM.

The Committee organized for the above object sit daily at the Commercial Buildings, at 3.30, and invite co-operation from all parties capable of giving reliable information on the above subject.

R. JACKSON, Assist. Sec.
Commercial Buildings.

APPENDIX AG.

(*Given in by the Earl of Clancarty, Question* 6319.)

ABSTRACTS from the HALF-YEARLY REPORTS of the MIDLAND GREAT WESTERN RAILWAY, from July 1851 to June 1864, both inclusive, showing the Amount realized from Passengers, Goods, and Cattle Traffic, in each Half-Year, and distinguishing between the Returns for 1st, 2nd, 3rd, and 4th Class Passengers. Also Returns of Passenger Traffic and Revenue in each Year.

Appendix AL.

Port and Trade of Waterford.

(Referred to by Mr. Delahunty in his Answer to Question 5036.)

Town Hall, 10th February 1865.

The Mayor of Waterford requests a meeting of the citizens, merchants, traders, and others interested in the trade and port of Waterford and the preservation and development of the traffic with England and Wales, on Thursday, the 19th February next, at one o'clock, to receive the report of the Committee appointed at the meeting held at the Town Hall, on the 23rd of December last, to inquire into and report to a future meeting as to the best means that should be adopted to promote, protect, and develop the trade and commerce of Waterford, and to take the necessary action thereon.

Report of Committee.

At a meeting convened by the Mayor, and held at the Town Hall, on Friday, the 23rd December 1864, of the merchants, traders, and others interested in the trade and port of Waterford, to consider the effect the traffic arrangements of our local railways and steam-boats may have on the trade and commerce of Waterford,

The Mayor of Waterford in the Chair.

The heads of through traffic arrangements entered into by the Great Southern and Western Railway, the Waterford and Limerick Railway, the Cork and Limerick Direct Railway, the London North-western Railway, the Waterford Steamship, the Cork and Liverpool Steamship, and the City of Dublin Steamship companies, for carrying goods at equal rates from the Limerick and Tipperary districts, by the ports of Dublin, Cork, and Waterford, to Birmingham and all parts of England north of Birmingham, *viâ* Liverpool or Holyhead, were read, and which arrangements are as follow:—

"1. Agreement to carry goods.

"2. Rates to be the same by all routes.

"3. Through rates to be available by all the routes, viz., *viâ* Cork, *viâ* Dublin and Liverpool, *viâ* Waterford, and *viâ* Dublin and Holyhead.

"4. Receipts derived from traffic to and from the following places, viz.: Limerick, Limerick Junction and Tipperary, with Liverpool and stations in England north of Birmingham (Birmingham inclusive), to form a common fund, to be dealt with as under:

"As respects traffic through Liverpool, the proportion due to the railway distance in England to be paid to the London and North-western Company.

"As respects traffic *viâ* Holyhead, after deducting from the gross receipts the proportions on the Irish mileage, and 138 miles of the distance from Dublin to destination, the remainder to be paid to the London and North-western Company.

"The residue, that is to say, the earnings by all the routes, as between the three places mentioned, and Liverpool by the steam-packet routes, and a point 138 miles from Dublin *viâ* Holyhead, say Holywell station, such earnings to include the proportions due upon any through traffic carried by any of the parties hereto in connexion with any other companies or carriers in England, *viâ* Liverpool and *viâ* Holyhead, and also the earnings upon the carryings of the City of Dublin Company, or London and North-western Company, in connexion with the Grand Canal Company of Ireland, to be divided amongst the companies in manner following, it being understood that the Cork route has an interest in the traffic to and from Limerick only:

"The companies carrying the traffic to be credited with 40 per cent. of the earnings, as working expenses.

"50 per cent. of the remainder to belong to the railway and steam companies owning the routes *viâ* Waterford and *viâ* Cork, to be sub-divided between them in such proportions as they may agree upon.

"50 per cent. to the companies owning the routes *viâ* Dublin and Liverpool and *viâ* Dublin and Holyhead, to be sub-divided between them as follows; viz., 50 per cent to the railway companies up to Dublin; 25 per cent. to the City of Dublin Company, and 25 per cent. to the London and North-western Company, in respect of their mileage upon the before-mentioned 138 miles.

"Settlements in the Irish clearing house.

"Unconsigned traffic from Great Southern and Western Line, for Liverpool, to be given City of Dublin Company; other places common to City of Dublin Company and London and North-western Company to be divided; the City of Dublin Company handing such traffic, and all other unconsigned traffic, to the London and North-western Company at Liverpool.

"The Cork and Waterford Steam Companies to hand to the London and North-western Company at Liverpool all traffic not specially consigned. In like manner, City of Dublin Company and London and North-western Company to give all unconsigned traffic to the Great Southern and Western Company.

"No allowance to be given to induce any party to send by a particular route,

"The through rates in no case to exceed the sum of the local rates.

"In the division no company to get more than their local rate for the time being for similar traffic.

"Waterford and Limerick Railway Company, Cork and Limerick Direct Railway Company, undertake that all traffic consigned through them by other routes than *viâ* Liverpool or Holyhead, between places in England and the places in Ireland to which this agreement refers, shall not be booked through, and shall be charged the local rates.

"The London and North-western Company, upon the demand of the Great Western Company, or of any of the parties to this agreement, will concur with the Great Western Company in making through rates to stations upon that railway.

"Arrangements to be in force for twelve months certain, and to continue after, until three months' notice by one of the parties."

N.B.—These arrangements came into operation in September 1864.

It was thereupon proposed by James Delahunty, Esq., seconded by John A. Blake, Esq., M.P., and unanimously resolved:—

"That a committee be appointed to inquire into and report to a future meeting as to the best means that should be adopted to promote, protect, and develop the trade and commerce of Waterford, viz., the mover and seconder, the Mayor, Messrs. William Malcolmson, Edmond Power, J.P., John Mackesy, J.P., Samuel T. Grubb, J,P., Henry F. Slattery, T.C., Pierce Cox, Ald., Joseph Fisher, F. G. Bloomfield, J.P., John O'Brien, John Hudson, William Johnson, J.P., Patrick J. Dowley, T.C., Patrick A. Power T.C., Thomas F. Strange, T.C., Thomas B. Prossor, T.C., Abraham Denny, Ald., Daniel Carrigan, with power to add to their number.

"The following were subsequently added to the committee:—The Earl of Bessborough, Rev. J. T. Medlycott, Messrs. Joseph O'Dwyer, T.C., Richard O'Donnell, J.P., Andrew Ryan, Ald., and Charles Newport, J.P."

At a meeting of the committee, held on Thursday, the 5th of January 1865, the Mayor in the chair, the following resolutions were unanimously agreed to:—

"That the directors of the Waterford and Limerick Railway Company be asked to furnish to this committee a copy of all existing through traffic arrangements made by them with the London and North-western and other railway and steamboat companies, and also copies of any through traffic arrangements made in and since the year 1857, with their dates.

"That a deputation, consisting of the Mayor, Messrs. John A. Blake, M.P., Edmond Power, John Mackesy, James Delahunty, Daniel Carrigan, F. G. Bloomfield, and S. T. Grubb, do wait upon the Board of Directors in reference to same, and inquire how far the company are at liberty to make through traffic arrangements with the Great Western Railway Company."

A copy of the foregoing having been sent to the railway company, the following reply was received on Monday, the 30th of January:—

"Waterford and Limerick Railway, Secretary's Office at Limerick Terminus, January 28th, 1865.

"Port and Trade of Waterford.

"Sir,—With reference to the resolutions received from you herein, I now beg to advise that my directors will have pleasure in receiving the deputation named on Wednesday next (1st proximo), at our Waterford Terminus board-room, at noon, say, for the purpose of discussing with them the best practicable means of developing the trade and commerce of Waterford. As to furnishing copies of all our through traffic arrangements, made in and since 1857, my

board regret having to decline until they are in a position to know how far such divulging of affairs pertaining to management of a private property may be acceptable to the general body of shareholders.

"I am, sir, your obedient servant,

"T. Ainsworth, Secretary.

"The Right Worshipful the Mayor of Waterford."

The deputation waited upon the board at the time appointed, and at the interview they were informed,

"That the board of directors did not deny the correctness of the heads of arrangements as read at the Town-hall meeting.

"That they were in operation and acted on since Jaunary 1864, although not regularly executed and signed for some months later.

"That the board did not consider these arrangements as injurious to the port and trade of Waterford, and it was stated in evidence thereof, that the traffic for the half-year ending the 31st December 1864, showed a carrying in goods of 49,000 tons, as against a similar traffic in 1863 of 45,000 tons; and further they would join in trying to develop and increase the traffic and commerce of Waterford."

The committee having again met on Friday, the 10th of February, the Mayor in the chair, and having taken the several matters into consideration are of opinion, from the information received, that the heads of through traffic arrangements, as read at the meeting of the 23rd December last, are true and correct, and have been in operation during the year 1864.

That this committee, with all respect for the opinions of the directors, considers these arrangements to be well calculated to divert the traffic of the districts to England, *viâ* Dublin, and vitally injure the trade and commerce of Waterford and the southern communications.

The committee submit that in 1859, when a measure also calculated to divert the traffic was proposed by the then Waterford and Limerick railway directors, it was strenuously and effectively resisted by Waterford and the south, and they recommend that resolutions similar to the following, which were then agreed to, should now be adopted:—

"At a public meeting of the citizens of Waterford, held in the Town Hall on Friday, the 9th day of December 1859, convened by the Mayor on requisition, for the purpose 'of considering the effect of a Bill respecting the 'sale of the Waterford and Limerick Railway to the Great 'Southern and Western Railway Company, about being 'introduced in the next session of Parliament,' the Right Worshipful John Mackesy, M.D., Mayor, presided, and the following resolutions were unanimously adopted:

"Moved by Joseph Fisher, Esq., and seconded by Dr. Wm. Carroll, T.C.:

"'*Resolved*, That James Delahunty, Esq., do act as secretary to the meeting.'

"Moved by William Malcolmson, Esq., and seconded by John A. Blake, Esq., M.P.:

"'*Resolved*, That finding the Directors of the Waterford and Limerick Railway Company have, by the casting vote of their chairman, agreed to recommend the sale of that line to the Great Southern and Western Company, we hereby express our decided conviction that such a measure, by placing a monopoly in the hands of one powerful company, would prove injurious to the port and trade of Waterford, as well as to the interests of the south of Ireland generally, tending as it manifestly does, to the centralising of the trade to Dublin.'

"Moved by Thomas W. Jacob, Esq., and seconded by Thomas Murphy, Esq. (mayor elect):

"'*Resolved*, That any Bill introduced into Parliament for this object shall, for the reasons above stated, receive our strenuous opposition, and that a committee be now appointed to obtain the requisite funds for defraying the necessary expenditure; and that they solicit grants for this purpose from the corporation and other public bodies in the city, whose interests will be affected by the proposed measure, and that they report to an adjournment of this meeting; the committee to consist of the following gentlemen:

The Mayor.	J. D. Lapham.
The Mayor elect.	T. W. Jacob.
General Roberts.	Ald. Mackesy, J.P.
W. Malcolmson.	Ald. Ryan.
James Delahunty.	Ald. Davis, J.P.
John A. Blake, M.P.	Colonel Roberts.
Sir H. W. Barron, Bart.	Doctor Carroll, T.C.
Edward Roberts.	H. Gallwey, T.C.
Henry White.	J. Fisher.
John Power, J.P.	C. Redmond, T.C.
J. S. Richardson.	T. B. Prossor, J.P.
Charles Ambrose.	Capt. Johnson (City High Sheriff elect).
P. Cox, T.C.	Edmond Power, J.P.'
A. Denny.	

"Moved by James Delahunty, Esq., and seconded by Col. Roberts:

"'*Resolved*, That the Bank of Ireland be requested to act as treasurer to the funds to be subscribed.'

"Moved by J. S. Richardson, Esq., and seconded by Henry White, Esq.:

"'*Resolved*, That the members for the city of Waterford, Michael D. Hassard and John A. Blake, Esqrs., and the members for the county, the Hon. Walter C. Talbot and John Esmonde, Esq., and other members for the south of Ireland whom the committee may think proper to address, be requested to afford their assistance in giving strenuous opposition to the proposed measure.'

"Moved by Abraham Denny, Esq., and seconded by Henry Davis, Esq., J.P.:

"'*Resolved*, That the committee be requested to communicate, either by deputation or correspondence, with the other towns connected with the Waterford and Limerick Railway, and also with the Great Western Railway Companies of England and the South Wales Railway, asking them to co-operate in opposing a measure so injurious to our common interests.'

"John Mackesy, M.D., Mayor, Chairman.

"James Delahunty, Secretary."

They further recommend that a permanent standing committee should now be appointed to take immediate action for the preservation and development of the traffic of the southern routes, and invite, for that purpose, the co-operation and combination of all parties interested therein at both sides of the channel.

(Signed) John Lawler, Mayor, Chairman.

Preservation and Development of Traffic between Great Britain and Ireland by the Southern Communications.

At a Meeting of the Directors of the Waterford and Kilkenny Railway Company held on Tuesday, the 10th of January 1865,

James Delahunty, Esq., in the Chair,

It was moved by Edmond Smithwick, Esq., Mayor of Kilkenny, seconded by Michael Cahill, Esq., and resolved:—

That the through traffic arrangements lately made by the London and North-western Railway Company with Southern Railway and Steam Boat Companies, are eminently calculated to divert and draw the traffic of the south of Ireland to and from England, *viâ* Dublin, and thence by Liverpool and Holyhead, and thereby damage and eventually destroy the direct communications between the south of Ireland and these ports.

That such diversion and withdrawal of traffic from the southern routes is effected by the facilities afforded in conveying traffic to all the principal manufacturing and business towns in England, *viâ* Dublin, there being at least an average sailing from that port of four steamers per day with goods traffic to Liverpool or Holyhead, and which facilities obtain and secure a preference for the Dublin line when goods are carried by all routes at equal rates.

That the preservation and development of the southern traffic communications between Great Britain and Ireland equally affect the interests of the trading communities at both sides of the Channel, particularly the south and south-east of Ireland, South Wales, and the west and south-west of England, and we therefore deem it necessary to call upon the municipalities, the railway and other companies interested, to adopt such timely measures as may be considered necessary to preserve the existing traffic, and also open up and develop other channels of trade and traffic that are now closed to the southern ports.

That a copy of these resolutions be forwarded to all parties interested, and their co-operation and assistance be respectfully and earnestly solicited.

That the Waterford and Limerick Railway Board be solicited to unite with us in promoting and effecting the foregoing objects.

James Delahunty, Chairman.
William Williams, Secretary.

Appendix AM.

Irish Railway Reform Movement.

Statement as submitted by the Rt. Hon. the Lord Mayor of Dublin to the Royal Commissioners on Railways, showing Cause of Complaints on Irish Lines.

(*Referred to by Mr. Barrington in his Answer to Question* 7123.)

No.	Name of Complainant.	Calling.	Address.	Railway referred to.	Nature of Complaint.
1	U. McDonnell	Merchant	Galway	Midland Great Western of Ireland.	Too high rates for beverages.
2	John Tate & Co.	Distillers	Belturbet	Irish North-western.	Excessive rates for corn on short distances.
3	James Forbes	Rope Maker	Galway	Midland Great Western.	Railway rates cannot be paid so high.
4	G. Rutledge	Merchant	Do.	Do.	Ditto.
5	J. Harrisson	Do.	Do.	Do.	Ditto (special).
6	H. J. Banon	Do.	Do.	Do.	General complaint of the whole system.
7	F. McNamara	Do.	Do.	Do.	Excessive rates on sugar, &c.
8	George Ledlie	Do.	Do.	Do.	General statement against rates for goods and passengers (special).
9	Town Commissioners	-	Longford	Do.	Resolution against railway system.
10	Town Commissioners and Inhabitants.	-	Bagenalstown Co., Carlow.	Great Southern and Western, Ireland.	Ditto as above (very special statements).
11	John Wilson	Town Clerk	Longford	Midland Great Western.	Comparative rates on railway and canal, showing excess on railway.
12	Henry Darcus	Mayor of Londonderry.	Londonderry	Irish North-western and lines to Dublin.	General statement against present system. (Important, see paragraph No. 4.)
13	Wicklow Copper Mining Company.	Mining Company	45, Dame Street, Dublin.	Dublin, Wicklow, and Wexford.	High and unfair rates for ores.
14	H. M. Darcy Irwine	Landed Proprietor.	Enniskillen	Irish North-western and to Dublin lines.	Exorbitant rates for timber, coals, &c. (Special.)
15	Francis Mulligan	Provision Merchant.	Dublin	Irish Railways	General statement. (Very special.)
16	H. Kinahan	Timber Merchant	Do.	Do.	Exorbitant rates.
17	Capt. Maxwell Harte	-	United Service Club.	Do.	Malarrangements for passengers.
18	George H. Pentland	Landowner	Drogheda	Dublin and Drogheda.	Overcharges on all classes of produce.

Average Interest (taking the lowest rate in the cases where the interest is reduced), 3·97 per cent.

No proceedings have been necessary to enforce payments except in the case of the Londonderry and Coleraine Railway, as above stated. When borrowers are in arrear, urgent letters demanding payment are sent by the Board's Secretary, and if not attended to, then by the Solicitors, which have resulted in the arrears being arranged.

W. W. Willink, Secretary.

Public Works Loan Board, 12th June 1865.

Appendix AP.

Letter from Irish North-Western Railway Company.

Irish North-western Railway Company, Offices,
43, Lower Gardiner Street, Dublin,

Sir, June 15, 1865.

I have the honour to submit, for the consideration of the Royal Commission on Railways, the following resolutions which were unanimously agreed to by the Board of this Company to-day.

1st. Resolved, that if the Government should feel disposed, when the Commissioners appointed to inquire into Irish railways shall have made their report, to advance at a low rate of interest a sum sufficient to discharge the bonds and debentures of this company, this Board will be prepared to reduce the passenger fares as may be hereafter agreed upon.

2nd. Resolved, that the Board of this Company would feel disposed to, at once, make a reduction in their present rates, if any inducement were now held out by the Treasury in relation to the existing Government loan, pending the Report of the Railway Commissioners.

3rd. Resolved, that copies of the foregoing resolutions be forwarded to the Royal Commission on Railways, and to the Right Hon. the Chancellor of the Exchequer.

I have, &c.

To the Secretary, Royal Commission on Railways, Irish Inquiry, House of Lords, London, S.W.

W. Eykelbosch,
Secretary.

Appendix AS.

Official Collection of Tariffs for the Transport of Goods, Finances, Equipages, Horses, and Cattle, on the State Railways of Belgium, 1 July 1864.—(Translated for the Commission.)

Note.—In making this Translation it has been considered expedient to retain the money, weights, and measures in their original denominations.

The following data will serve for their conversion into English units, when required.

Money.

25 francs = 1*l.*
1 franc or 100 centimes = 9·6*d.*

Weights.

1 kilogramme = 2·21 lbs. avoirdupois.
100 kilogrammes = 221 lbs., or nearly 2 cwt.
1,000 kilogrammes = 2206 lbs., or nearly 1 ton.

Measures.

1 metre = 3·28 English feet.
1 kilometre = 1,094 yards, or about 0·62 Statute miles.
1 lieue or 5 kilometres = 3·1 miles.

Conditions for regulating the Transport of Goods, Finances, Equipages, Horses, Cattle, and Dogs.

CHAPTER I.—GOODS.

Section I.—Express (Parcels).

Tariff No. 1.

Article 1.—Parcels are transported *to any distance* on the State Railway at regular fixed charges as follow, including house delivery:—

	fr. c.
For packages of the weight of 2 kilogrammes or under	0 50
For packages above 2 and up to 5 kilogrammes	0 75
For packages above 5 and up to 10 kilogrammes	1 00
For packages of more than 10 kilogrammes, per kilogramme	0 10

Every single letter, that is to say, weighing 10 grammes or less, may also be despatched at the price of 50 c. (This regulation does not apply to *transports mixtes.*)

Article 2.—The rate is applied to each package separately. Notwithstanding, if packages weighing alone less than 10 kil. are part of a despatch weighing more than 10 kil., the carriage must be rated according to the charges and conditions of Tariff No. 2, *unless the sender has expressly demanded the application of Tariff No.* 1. In the latter case the charge is applied at the rate of 10 c. per kil. on the total weight of the despatch.

Article 3.—The despatches of Tariff No. 1 are effected at the speed of mail trains, and by all trains indiscriminately starting half an hour after booking. They are delivered at their address within three hours after arrival, the hours of the night being excepted.*

Article 4.—Urgent despatches of goods of *all weights*, as well as single letters, may, on the demand of the sender, be delivered by *express* immediately on the arrival of the train, over the whole extent of the district limited by a circumference of 3 kilometres radius round the station taken as the centre.

The charge in this case is double that of Tariff No. 1.

Packets of 5 kil. and less are delivered by express at any distance for the double rate, plus 1 franc per zone of 5 kil. over the above radius.

The Administration may require deposits of earnest money.

Express despatches should always be pre-paid.

Section II.—Fast Service (Light Goods, Articles de Messagerie).

Tariff No. 2.

Article 5.—Tariff No. 2 applies to despatches of goods weighing from 10 to 300 kil., unless the sender expressly asks for the application of Tariffs No. 1 or No. 3.

Article 6.—The charges are applied at so much for each despatch,† and in kilogrammes by tens, any fraction of 10 counting as 10. The charges are made in whole *décimes* (*i.e.*, nothing less than 10 centimes is charged).

Article 7.—These goods are despatched on the day of their receipt by the trains appointed by the Administration, and they are delivered at their address within six hours after arrival, the hours of the night being excepted.

Article 8.—Goods which are not delivered at the office one hour before any departure can only be accepted for the following departure.

Section III.—Regulations common to Tariffs Nos. 1 and 2.

Article 9.—Senders have the right to demand the carriage of packages of any weight, at the charges and conditions of Tariffs Nos. 1 and 2.

Nevertheless, packages which are cumbersome or difficult to load are not carried by passenger trains, except to such extent as this can be done without obstructing them.

Article 10.—The loading and unloading of despatches under Tariffs Nos. 1 and 2 are effected by the servants of the Administration.

Article 11.—Oysters, fresh fish, and yeast, are despatched at the charges and conditions of Tariffs Nos. 1 and 2, unless the sender demand, on the *lettre de voiture*, the application of the charges and conditions of Tariff No. 3 (slow service). In such case these articles are rated according to the 1st class of the said Tariff.

Section IV.—Slow Service (Ordinary Goods, *Articles de Roulage*).

Tariff No. 3.

Article 12.—Goods for slow service are divided into four classes, conformably to the catalogue of classification annexed to the present pamphlet.

Article 13.—When one despatch of Tariff No. 3 contains goods of various classes, the charge of the highest class is applied to the whole weight.

Coals, destined for immediate embarkation upon vessels in the ports of Antwerp, Ghent, and Ostend, are transported at the charge of 3 c. per ton per kilometre, or 15 c. per ton per demi-myriametre, the charge not being higher than that of the 4th class of the normal tariff.

Article 14.—When the transport of the products, classed in the 4th class of Tariff No. 3, requires the use of closed waggons, or waggons covered with tarpauling cloths, it is rated at the charges and conditions of the 3rd class of the tariff.

Nevertheless the senders or receivers may claim the application of the charge of the 4th class, if they themselves furnish the cloths, and if required the necessary straw.

The cloths belonging to the senders must bear *very clearly marked* the name of the proprietors, and that of the station to which they are to be returned. These cloths are returned without expense to the place from whence they started.

Article 15.—For the despatch of more than three waggons the sender is bound to book them at least 48 hours before-

* These are, from 1 April to 30 September, 7 p.m. to 7 a.m.
" " 1 October to 31 March, 5 p.m. to 8 a.m.

† By each despatch is meant one or more packages coming from one sole sender and addressed to one sole receiver.

hand. A special register is placed at each station for this purpose. The sender is liable to a fine of 5 fr. per waggon if the goods are not brought to the station of departure on the appointed day, and the Administration may further dispose of the waggons.

The deposit of the fine of 5 fr. per waggon may be required at the time of booking.

For any transport the station-master informs the sender of the hour at which the required waggons will be placed at his disposal.

If, within the eight hours, the loading of the waggon is not effected by the servants of the sender, the latter will be liable to a fine of 25 c. per hour of delay and per waggon. When the loading should be done by the servants of the Administration the same fine will be exacted if more than eight hours elapse between the receipt of the first part of the despatch and its completion, that is to say if the entire despatch is not brought to the station within the eight hours.

The same fine of 25 c. per hour will be exacted for each loaded waggon which, by non-compliance with the appointed regulations, cannot be despatched by the train which ought to have conveyed it.

Article 16.—Except in the case of press of traffic, the despatches of the Tariff No. 3 are delivered at the station of their destination within 72 hours from their receipt, and they are delivered at their address, when required, within 24 hours after their arrival.

Article 17.—The minima of charge for Tariff No. 3 are fixed as follow:—

A. For 1st class goods, according to the prices indicated *au barème*. These charges include the expenses of loading and unloading, but not those of registry and delivery at their address.

B. For 2nd class goods, for an entire load of 4,000 kil.

C. For 3rd and 4th class goods, for an entire load of 5,000 kil.

Above these minima, the rates are calculated by hundreds of kil., neglecting fractions of 5 kil. or less.

Incomplete loads are charged in the 1st class, except those specified in the 1st section of the following Article.

Article 18.—Goods *en vrac, and not capable of being loaded with others*, are only admitted at the rate of a complete load (4,000 kil. for the 1st and 2nd classes, and 5,000 for the 3rd and 4th classes), whatever be the weight of the despatch.* This last regulation is equally applicable to goods proceeding from or destined for particular branch lines.

Article 19.—Loading and unloading of heavy goods are effected by the servants and under the direction of the agents of the Administration, at the rate of 10 centimes per 100 kil. for the two operations.

Loading consists in putting into the waggons goods placed by the sender on quays or other places appointed by the Administration.

The contrary operation constitutes unloading. The senders' or receivers' servants may be allowed to assist in these operations, but in no case will there be made, on this account, any reduction of the accessary expenses fixed by the tariff.

Nevertheless, the loading and unloading of all goods, *en vrac*, presented in complete waggon-loads must generally be effected by and at the expense of the sender or receiver, under the supervision of the agents of the Administration.

Packed goods of the 3rd and 4th classes, as also those packed goods of the 1st and 2nd classes designated below, may also be loaded and unloaded by and at the expense of the senders or receivers *when they are presented in complete waggon loads*.

Acids in general, cereals in general, charcoal, rags, &c. intended for the manufacture of paper, crockery, glass, seeds, guano in bags or in barrels, porcelain, earthenware, salts of soda and potash, window glass.

Loading by the sender necessitates unloading and delivery by the care and at the expense of the receiver.

On the other hand, loading by the Administration necessitates the payment of the rate fixed by the tariff for loading and unloading.

Any excess above the complete load follows, as regards the expenses of loading and unloading, the rule of the complete load to which they form the supplement.

Article 20.—When the sender or receiver demands, on the arrival of goods, the verification of their weight, a rate of 5 c. per 100 kil. is charged for this operation.

However, the above rate is not exacted if the operation shows an error committed to the prejudice of the sender or receiver.

* A list of these goods is given in the original.

SECTION V. TRANSPORTS BY SUBSCRIPTION. (ABONNEMENT).

Article 21.—A reduction of 25 c. per ton from the charges of the four classes of Tariff No. 3 is allowed on transports effected by subscription, on the following conditions, viz.:

The senders or receivers shall bind themselves to supply every day for six or more consecutive months, between two given stations, of one or more waggons of goods for transport, without having liberty to exceed the number to be fixed by the Administration.

The subscriber will have the right to increase the tonnage fixed at his engagement, starting from the first of each month, on condition of using regularly during at least 30 days, the supplementary waggons; the Administration, however, reserves expressly the right of reducing these augmentations to the amount of tonnage fixed at the engagement.

The subscriber may also change, any month, either the place of starting or the place of destination of the waggons engaged.

Subscriptions from one to six months take place at the ordinary charges of the tariffs.

Subscriptions at reduced or normal prices may be suspended Sundays and fête days.

The time-bill of the waggons, as also the periods to be occupied in loading and unloading, will be fixed by the Administration, counting at least four hours for each of the operations of loading and unloading.

In case of detention of the waggons hired, the subscriber is liable to a demurrage equal to half the price of their hire, unless the detention happen by *force majeure*, as closing of barriers, the extinction of a blast furnace, a forced interruption in the working of the line, or failure in the service of the railway.

The demands for subscription, as well as those for supplementary waggons or for changes in the time-bill, should be addressed by letter to the station-master a week beforehand.

Every waggon retained by subscription should be furnished with a plate in metal or in wood, to be provided by the sender, and bearing the indications which the Administration will require. Subscriptions at reduced or normal prices, comprising a regular transport of more than five tons daily, will be effected by means of waggons of 5, 10, or 15 tons, at the convenience of the Administration.

SECTION VI.—TRANSPORT OF FURNITURE BY MEANS OF VANS (TAPISSIÈRES).

Article 22.—The employment of vans or carriages for moving household furniture is regulated as follows:

A. The charge is established at the price for the first class of tariff No. 3, and at the rate of 6,000 kil. per van, the maximum weight of the contents not exceeding 3,000 kil.

No "*complément de charge*" on the waggon is allowed. The loading and unloading of the furniture at the houses are at the expense of the sender and of the receiver. The expenses of the loading and unloading of the van on the railway truck are included in the tariff.

The despatch is effected by slow train.

B. When the fetching from and delivery to the house are undertaken by the contractor for cartage they are charged at the rate of 5 fr. per van for each operation, including the conveyance of the van from the station to the house and its return.

The parties interested have the power to make use of any other means or of their own horses.

A period of eight hours is allowed for each of these operations counting from the time of the departure of the van until its return.

It should be clearly understood that the period of eight hours applies exclusively to the hours of the day. Thus, for a carriage placed in the evening at the disposal of the interested party, the period will date only from the following morning. After the period of eight hours 5 c. per hour are charged as demurrage for detention.

C. Vans may serve for transports beyond the railways. But a special authority is required for those which are effected by private railway or railways out of the kingdom. For any such transport beyond the railway, a charge for hire of 5 fr. per day is made, dating from the delivery of the van at the station of arrival or of exchange until its return. The station-masters are authorized to require deposits for the dues, according to the probable time the van will be detained beyond the state railway.

The cartage external to the railway is made at the cost, risk, and peril of the sender. He is responsible for any damage which may happen to the van during the same.

D. Demands for vans are received in all the stations on payment of a sum of 10 fr. per van, which is repaid to the sender at the time of starting. In case the van ordered is not used, this sum will be appropriated by the Treasury independent of what may be due in virtue of Section B. above.

CHAPTER II.—SPECIE, JEWELS, AND VALUABLES (FINANCES).

Tariff No. 4.

Article 23.—This tariff applies to the transport of gold and silver, either in ingots or coined or wrought, of gold or silver plate, of mercury, of platinum, of papers, jewels, precious stones, lace, objects of art, and other valuables.

Any false declaration concerning the nature, value, or weight of the above-named objects is considered as fraud.

Article 24.—The rate is applied per 1,000 fr., all fractions inferior to this amount being considered as 1,000 fr. The tariff includes accessary costs of loading and unloading, of registry and delivery at the address.

Article 25.—In case the rate of the finance tariff should be inferior to that of tariffs No. 1 and 2, calculated by the weight, the latter will be applied.

Article 26.—To be received for transport, articles declared according to value should be carefully packed and sealed and should bear the address of the receiver.

They should be enclosed either in bags neither torn nor mended, sewn inside, and perfectly secured by a cord, on the end of which should be a wax or leaden seal; or in perfectly sound cases or barrels, secured with a crossed cord in one single piece, on the two ends of which should be the sender's seal. These seals should bear special letters or a particular well defined sign; all packages bearing seals with the mark of a piece of money, or lines, straight, crossed, or round, will be refused. The same formalities must be observed with all packages declared according to value.

In all cases the contents and the value should be declared upon the address and upon the note of the despatch, which should besides reproduce the mark of the wax or leaden seal which is on the packages, bags, cases, casks, or parcels.

Article 27.—Articles of finance or declared by value are despatched by the earliest passenger train starting in the day, provided they are booked half an hour before the departure.

They are delivered three hours after arrival, the hours of the night being excepted.

Article 28.—*Urgent* despatches of valuable articles under this class may, at the demand of the sender, be delivered by express immediately after the arrival of the train, but only in places where cartage from the railway is organized. (Art. 30.) In this case the rate is double that of tariff No. 4. These despatches may be prepaid or left to be paid by the receiver.

CHAPTER III.—COLLECTION AND DELIVERY. (PRISE ET REMISE À DOMICILE.)

Article 29.—The collection and delivery to the address apply to goods in general as well as to despatches of valuables.

The Administration, however, do not undertake these operations for goods which they do not load.

Article 30.—The collection and delivery to the address are done by the agents of the Administration at the prices indicated in the tariff, in those places where cartage is organized.*

This service extends to suburbs of towns, and in general to all districts situated within a radius of 3 kil. round the station taken as the centre. Beyond the limits comprised in this radius a supplementary tax of 20 c. per despatch is charged.

Article 31.—The collection should be requested 24 hours in advance, either by unsealed letter posted to the address of the station-master or verbally in the goods office. On the state railway these letters go free. They should declare with precision the address of the sender, the number, nature, and destination of the packages.

Article 32.—The tax for collection is always charged for the despatches of tariff No. 3, delivered at the offices established in the interior of towns.

Article 33.—The periods indicated in Articles 3, 7, and 16 are not binding when the formalities of the custom-house prevent them.

Article 34.—Nothing is deducted from the charge for delivery for despatches of the tariffs Nos. 1, 2, and 4 addressed "*bureau restant*," or consigned to stations not included in Art. 30.

Delivery at destination is also charged for incomplete loads of tariff No. 3, consigned to stations where railway carriage is organized, unless there are contrary directions on the carriage ticket.

CHAPTER IV.—EQUIPAGES.

Tariff No. 5.

Article 35.—Tariff No. 5 applies to equipages to be transported by the first passenger train (expresses excepted). No distinction is made between carriages of two or four wheels, or of one or two bodies.

Equipages should be delivered at the station at least one hour before departure.

Article 36.—Passengers conveyed in their own equipages are charged first class.

If they travel in the carriages of the train they pay according to the passenger tariff.

Article 37.—Equipages, accompanied by passengers, to a destination beyond Brussels, are only booked as far as Brussels.

Article 38.—Equipages may be transported by mixed or goods trains at the charges and conditions of the first class of tariff No. 3, the charge being not less than for 4,000 kilog. per waggon.

Article 39.—The expenses of loading on the truck and unloading transported equipages, either by express or slow trains, are included in the charge of transport, which is always payable on starting.

Article 40.—The transport of a coffin is at the same rate as an equipage by express train.

CHAPTER V.—HORSES, CATTLE, DOGS, &c.

Tariff No. 6.

Article 41.—These animals are transported, either by ordinary passenger trains (express excepted), or by mixed or goods trains, as directed by the Administration.

These two modes of despatch are called respectively fast and slow transports.

Article 42.—The rate of the fast tariff is applied by indivisible parts of one to three horses, or per truck of great or small animals.

Despatches of horses and animals by fast trains for a destination beyond Brussels are only booked as far as Brussels.

Article 43.—Slow transports are divided into three categories, viz.:—

1st category.—1 horse, 1 or 2 oxen, cows, or asses, 1 to 5 pigs or calves, 1 to 10 sheep.
2nd „ 2 horses, 3 or 4 oxen, cows, or asses, 6 to 10 pigs or calves, 11 to 20 sheep.
3rd „ 3 horses, 1 truck of great or small animals.

It will be allowable to the senders of oxen to pack in a truck the number of heads that they choose, but the Administration will be free from all responsibility for injuries, accidents, and mortality of the animals. The prices of tariff No. 6, fast and slow, 3rd category, are increased by 25 per cent. for the transport of animals effected at the demand of the sender, in trucks of large pattern or of two floors.

Article 44.—Horses and cattle should be presented at least an hour before departure.

Transports which require the use of more than two boxes or of three trucks should be demanded 48 hours in advance.

In the intermediate stations this period is always strictly enforced, whatever be the importance of the despatches.

Article 45.—The loading and unloading of animals sent by fast or slow trains are effected at the entire responsibility of the senders and receivers. The Administration may forbid unloading and reloading during the voyage.

Article 46.—Horses and oxen despatched by fast or slow trains should be accompanied by a drover. The gratuitous transport in boxes or in cavalier or cattle trucks is accorded to only one drover per despatch or per truck.

If the drover place himself in another carriage he must pay the price of the passenger tariff.

Article 47.—In case of a delay of more than six hours in the arrival of the trains, the Administration is only responsible for damage sustained up to the price of transport.

* A list of these stations is given in the original.

Article 48.—When the transports of horses or of cattle amount to 10 trucks, at a minimum, for the same destination, they may be effected by special train, at the prices of slow trains, provided the request be made to the Administration two days in advance.

Article 49.—Small animals presented for transport in baskets or conveniently closed bags may be despatched (provided the weight of packages do not exceed 100 kil.) at the charges and conditions of goods tariff No. 2. However, these despatches are not admitted to passenger trains, and the Administration do not undertake their delivery at destination. They assume no responsibility respecting these despatches.

Article 50.—Dogs accompanying passengers pay, whatever be their size, the price of the third-class passenger tariff. When they are shut up in baskets they are accepted without responsibility at the charges and conditions of tariffs Nos. 1 or 2, or of the tariff of luggage.

CHAPTER VI.—EXCEPTIONAL TRANSPORTS.

Article 51.—Reductions in charge up to 50 per cent. at a maximum may be allowed in exceptional circumstances or with a view to an increase of traffic.

Any request presented with this object should be addressed to the Administration at least a fortnight before the day fixed for the transport.

Article 52.—Empty cases returning are always rated at their real weight, and at the 1st class of tariff No. 3.

The rate is applied by tens of kil. with a minimum of 100 kil. These cases can only be transported by goods trains, unless the sender demand on the carriage ticket the application of tariffs Nos. 1 or 2.

Empty cases returning are only admitted as such when the sender can produce a voucher from the master of the station of destination, stating that they really have served for despatches of goods by railway. The carriage tickets should declare the good or bad condition of the cases.

CHAPTER VII.—GENERAL CONDITIONS.

Article 53.—For goods to be despatched according to tariffs Nos. 1, 2, and 4, the offices are open half an hour before the departure of the first passenger train, and shut half an hour before the departure of the last.

For goods by slow train the offices are open in the principal stations, from the 1st April to 30th September, from 7 in the morning to 7 at night, and from the 1st October to the 31st March, from 8 in the morning to 5 at night.

At intermediate and stopping stations goods are only accepted for transport by those trains which stop there.

Article 54.—At stopping stations where there are no sidings, the Administration is not bound to accept for transport despatches weighing more than 1,000 kil., or requiring the stationing of a waggon on the principal line of rails.

Article 55.—All booking of goods, valuables, equipages, horses, and animals is certified by a bulletin delivered to the sender or by a receipt given in his book.

The receiver is bound to give a receipt for goods and valuables on the register of porterage or on the notice of arrival.

Article 56.—The station masters give notice to receivers by bulletin of the arrival of goods of which the Administration do not undertake the delivery at their address. This bulletin is charged 10 cent. for goods despatched "*bureau restant*" under tariff No. 3. It is delivered gratuitously for despatches by tariffs Nos. 1, 2, and 4, addressed *bureau restant*, or in destination to the stations where carriage is not organized.

The receivers have the right of indicating an agent in the locality of the station of arrival.

The time allowed for unloading counts from the delivery of the notice to the receiver or to his agent by the porters of the Administration or by the post. The goods should be taken away from the station within eight hours, Sundays and holidays, as also the hours of the night, being excepted. This period being expired, all hours following, night and day, without exception for Sundays and holidays, are counted as delay. The following rates are exacted as indemnity for forced detention of the waggons, deposit or warehousing of the goods.

For goods not unloaded, 25 cent. per hour and per waggon of any tonnage.

For goods unloaded but not taken away, 2 cent. per day and per 100 kil., the charge not being under 10 centimes.

In case of press of traffic the Administration reserve to themselves, further, the right of unloading or cartage of the goods at the expense of the sender, at the prices fixed in the tariff for these operations.

Article 57.—Within 10 days of the arrival of goods to be placed in bond, the receivers must take away such goods or store them in their own name, discharging at the same time the cost of transport and the expenses disbursed by the Administration of the railways.

After the expiration of the period fixed by the preceding paragraph, the goods which the receivers shall not have disposed of as above prescribed, will be chargeable, for the profit of the Railway Administration, with an indemnity of 4 centimes per day and per 100 kil., with a minimum of 50 cent. per despatch, without prejudice to the storage dues or others payable to the Administration of Customs.

Article 58.—Goods whose weight is less than 200 kil. per metre cube are charged with an increase of 50 per cent. on their real weight up to a maximum of 200 kil. per metre cube. Exception is made to this regulation in favour of raw and artificial wools and cotton and woollen rags, which are admitted at their real weight.

Article 59.—The transport of indivisible masses of a weight superior to 10,000 kil., or necessitating the use of special vehicles, is not obligatory. If the Administration take them, the prices and conditions of transport and also of the collection and delivery are settled by agreement.

Article 60.—The normal length of the waggon intended for the transport of goods is fixed at 6 metres.

The charge for despatches of more than 6 metres in length is settled as follows:—

From 6 to 12 metres.

a. According to the weight attributed to the despatch when it is equal to or above 6,000 kil.

b. According to this weight increased by 1,500 kil., when it is less than 6,000 kil., with a maximum of 6,000 kil.

From 12 to 18 metres.

a. According to the weight attributed to the despatch when it is equal to or above 10,500 kil.

b. According to this weight increased by 3,000 kil., when it is less than 10,500, with a maximum of 10,500 kil.

From 18 to 24 metres.

a. According to the weight attributed to the despatch when it is equal to or above 15,000 kil.

b. According to this weight increased by 4,500 kil., when it is less than 15,000 kil., with a maximum of 15,000 kil.

Article 61.—The loading of waggons shall not exceed the following dimensions:—

Width 2·70 m., excluding the covering.
Height 3·40 m., above the level of the rails.

The width of the loading must not without special licence surpass 2·70 m. When the width is only 1·50 m. at the top, the height of the loading may be carried to 4·10 m. above the level of the rails.

Every loading being more than from 6 to 14 metres in length shall be limited to 3·10 m. above the level of the rails in height, 2·40 m. in width.

The transport of goods exceeding 14 metres in length is not obligatory.

For transport of articles of this kind, the sender should demand a special authorization.

Article 62.—Every parcel, package, or bale should be conveniently packed and bear a very legible mark or address.

Articles presented for transport imperfectly packed will be refused, or only be accepted on condition of a written declaration of responsibility to be delivered by the sender, and provided they can do no damage to goods with which they may be in contact.

Article 63.—Goods despatched according to tariff No. 3, as well as articles declared according to value, should be accompanied by a carriage note (*lettre de voiture*) or invoice, indicating the exact nature and weight of the despatch.

These indications are useful for the determination of the indemnity in case of loss, total or partial, or damage.

Each such carriage note must refer to one despatch, and can only apply to one single receiver.

Carriage notes accompanying despatches travelling on railways of the State and of Companies in what relates to mixed transports are not subject to the formality of stamping.

Despatches of small goods should also be accompanied by a carriage note when they are composed of more than three packages, or when they weigh more than 100 kil. In this case the preceding regulations are in all points applicable.

Article 64.—For goods loaded by the sender, the Administration do not answer for the number of packages, even if mentioned in the carriage notes. They decline

also all responsibility for damage resulting from bad loading or unloading.

Article 65.—In case of loss of packages despatched under tariffs Nos. 1 and 2, the Administration reserves the right of limiting the indemnity to 4 francs for each kilogramme missing.

Article 66.—Disbursements (*debourses*) are not obligatory.

Articles charged with disbursements are not received unless it is certified that their value exceeds the total of these disbursements and the rate to be paid for the transport.

No disbursements can take place on articles subject to deterioration.

Disbursements of more than 5 francs are subject to a charge of one-quarter per cent. calculated by indivisible amounts of 100 francs.

Articles to be delivered at their address on reimbursement should be declared as such on the carriage note.

Reimbursements are subject to the rate of the tariff of valuables. If the sender wish to leave this rate to the charge of the receiver, the reimbursement that follows is increased accordingly.

Article 67.—Goods are despatched either prepaid or chargeable to the receiver. Nevertheless articles subject to deterioration or of no value, as also urgent despatches (Art. 4), are only received prepaid.

Article 68.—In case of refusal on the part of the receiver, or when the latter is unknown, articles subject to deterioration or to corruption may be sold without judicial formalities for the benefit of the proper party. A *procès verbal* of the sale is prepared.

The return carriage of every article refused by the receiver, and which does not fall under the application of the preceding paragraph, is subject to charge.

Article 69.—Transport of inflammable materials by passenger train is forbidden.

In consequence, straw, hay, raw cotton or wool, tow, cotton rags, and other analogous goods, phosphorus, matches, alcoholic liquids, such as brandies, essential oils, and varnishes, are not admitted to these trains.

These materials can only be transported by goods trains and by means of closed or carefully covered trucks.

Acids in general, alcohols (spirits of wine or of juniper), phosphoric matches, essence or oil of tar, of pit-coal, or turpentine, ethers of all kinds, fireworks, lacker, and varnish of all kinds, as well as naphtha, are only received for transport in incomplete loads, Monday and Thursday in each week, on the rules and conditions of tariffs Nos. 2 and 3 (1st class), according to the weight.

Small parcels, samples, and in general, boxes less than 10 kilogrammes may be sent every day, at the rate of tariff No. 1, and by goods trains only.

Article 70.—The transport of gunpowder or gun cotton cannot take place by the railway.

The only exception is for transports of the Department of War executed according to the conditions prescribed by the conventions.

The rules of the police must be rigorously observed with respect to hurtful or dangerous materials. Poisons must not in any case be loaded with alimentary merchandise.

They ought to be indicated as such on the exterior of the package, and to be presented with special carriage notes.

Article 71.—If the Administratiou has reason to suspect the presence of hurtful or dangerous materials undeclared, it can cause the opening of the boxes or refuse the transport of them.

Every false declaration is punished in the legal manner.

The sender is responsible for every fraud discovered before or after the transport.

In case of accident he bears the consequences of the same.

Article 72.—In case of suspicion of fraud as regards the weight, the nature, or the value of the merchandise, the Administration can demand the opening of the boxes before or after the transport.

They will receive, if the case happens, the double of the supplement of charge, without prejudice to the measures to be taken in execution of the Royal Decree of the 19th May 1843, and of the law of the 6th March 1848.

Article 73.—The Administration declines all responsibility with respect to damages—

1st. When they have not been proved on the arrival of the merchandise and before its acceptation or carrying off by the receiver, or 24 hours after receipt of the notice of arrival, or else when the merchandise has been refused:

2nd. When the exterior of the cases or packages do not present signs of breakage or moisture. They will not answer for tearing or leakage, nor for rust on iron, steel, and zinc, nor for damage happening accidentally to cut stones or any other article not packed. Live animals, eatables, chemical products, objects of art, and especially pictures, are transported without any guarantee on the part of the Administration.

Article 74.—The responsibility of the Administration ceases—

1st. With respect to articles which it has undertaken to deliver at their address, as soon as the receipt is certified by the register of the porterage:

2nd. With respect to goods addressed "*bureau restant*" immediately after they are fetched away, as certified by the receipt of the receiver, or their delivery in virtue of Article 56:

3rd. With respect to merchandise addressed to a place beyond the railway, at the moment of their delivery to the agent appointed by the sender.

Article 75.—In case of reclamation, the carriage notes are only acknowledged by the Administration when they bear the stamp of the office from which they were sent or the signature of the station-master or of his deputy.

No account will be taken of the differences which may exist between the prices and periods notified on the carriage notes, and those specified by the present pamphlet.

In case of error in the application of the tariff, the Administration shall have the right to exact any deficit, either before or after delivery of the goods.

Every reclamation of overcharge or over-tax should be addressed by letter to the Administration through the station-masters within six months of arrival at the station of destination.

The Administration declines all responsibility on the head of reclamations made too late or not according to the above conditions.

Article 76.—Articles allowed to remain in the offices of the Administration more than six months will be sold conformably to the laws and regulations applicable thereto.

Article 77.—The rates fixed for the different kinds of transport do not include custom dues nor the expenses resulting from Custom-house declarations.

The expenses of the Custom-house, as well as fines incurred on the head of inaccurate or imperfect declarations, are chargeable to the sender and upon the goods, which will be liable for the same to the Administration.

Article 78.—The Administration declines all responsibility as to the absence or the inexactness of the documents made by the senders themselves, or upon their indications. The documents presented ought to be made known in the carriage note.

Article 79.—The agents of the Administration, appointed for the service of goods, are bound to give to the senders every explanation desirable and to facilitate to them as much as possible the accomplishment of the necessary formalities.

They should in case of need collect the delivery receipts and the passes forward.

(Here is given a general alphabetical List of Goods, showing their classification, followed by a Table of Distances between the various stations, expressed in leagues.)

TABLE showing the CHARGES for the TRANSPORT of GOODS, FINANCES, EQUIPAGES, HORSES, and CATTLE, for various Distances.

Distances.	Goods. Express Speed. Tariff No. 1. Parcels. Accessary Charges included. 2 kil. and under.	From 2 to 5 kil. inclusive.	From 5 to 10 kil. inclusive.	Fast. Tariff No. 2. "Articles de Messagerie." Accessary Charges included. Minimum per Despatch.	Charge per 10 kil.	Slow Speed. Tariff No. 3. "Articles de Roulage." Accessary Charges not included. GENERAL RULE applicable to all the SPECIAL TARIFFS.

The charges of the Special Tariffs are reduced 25 centimes per ton for regular transports of one waggon of five tons at least per day, taken by subscription for a duration of six months at least.

Appendix AT.

Offer from the Waterford and Limerick Railway to reduce their Fares on certain Conditions.

Waterford Terminus,
Sir, 19th July 1865.

Referring to the evidence given by our chairman before the Royal Commission on Railways, (duly reported to my board by Mr. Malcomson), I am directed to submit the subjoined proposition for consideration, as one mode of giving needful relief to that district of country in the southern part of Ireland traversed by our railway which this company would be willing to adopt, by way of giving effect to the object aimed at, and of testing the experiment how far such a reduction of fares will eventuate.

Your obedient servant,
William Pole, Esq., Secretary, Royal Commission on Railways. Thos. Ainsworth, Secretary.

ROYAL COMMISSION ON RAILWAYS.

(Irish Section.)

The Waterford and Limerick Company offer to reduce their Passenger Toll powers to the extent of one-third, say—

1st class, 3*d.* to 2*d.* per mile.
2nd „ 2*d.* to 1½*d.* „
3rd „ 1*d.* to ⅔*d.* „

provided the Government finds funds at the Harbours Improvement Act rate of 3¼ % interest, to take up the Company's bonds and preference capital as same become available.

J. P.

Appendix AV.

Memorial from Scariff, as to Boats on the Shannon.

To the Commissioners of Inquiry into Irish Railways.

The humble memorial of the inhabitants of Scariff and its neighbourhood in the county of Clare,

Sheweth,

That direct steam navigation on the river Shannon, from Killaloe to Lough Allen had existed for nearly forty years.

That the Midland Railway Company, by establishing steamers and conveying passengers without any payment between Killaloe and Athlone, compelled the other boats to cease plying, and established a monopoly in 1858.

That afterwards they entered into a contract by deed under seal, with the Great Southern and Western Railway Company, not only to put an end to such steam passenger traffic, but actually not to permit the making of any railway west of the Shannon, for a distance of 80 miles, forming one-eighth of this kingdom. Which from the position of these two railways they are effectually able to do.

That said injurious contract is fully acted on. The magnificent steam-boats are all rotting in the harbour of Killaloe.

That only lately, since the Commission of inquiry was proposed, a wretched tug-boat was put on, being the only steamer on the finest river in Europe for the length of eighty miles.

That there are many other important facts connected with this contract, too long to detail to the Commissioners, but most injurious to the public, to petitioners, and even to the railway companies themselves, which memorialists are ready to prove, if required by the Commissioners.

Memorialists pray for an inquiry by the Commissioners into these facts, directly affecting the railways, and the public interests, and particularly injurious to your memorialists.

And memorialists will ever pray, &c.

Return No. 2.

List of Agreements made with other Companies, giving their dates, periods, and a short sketch of the nature of each.

Belfast and County Down.

Belfast, Holywood, and Bangor.—Sale of the Holywood Branch to the above Company under 28 & 29 Vict. (Sess. 1865) by a payment of 50,000*l.* in cash, and an annual rent of 5,000*l.*, subject to redemption within ten years at 4½ per cent.

Belfast and Northern Counties.

Carrickfergus and Larne.—Agreement dated 23rd February 1863, terminable at six months' notice, for general working of the line at a mileage rate, varying according to the number of trains per day.

Londonderry and Coleraine.—Agreement dated 11th April 1865, terminable at three months' notice, for general working of the line at a mileage rate, according to the number of trains required.

Irish North-western and Ulster.—Agreement, expires 10th July 1865, for a division of all through traffic between Belfast and Londonderry.

Cork and Bandon.

Cork and Kinsale Junction.—Haulage agreement from June 1863 for five years, at a rate of 30 per cent. off traffic receipts.

Cork, Blackrock, and Passage.

Does not apply.

Dublin and Belfast Junction.

Banbridge Junction.—Lease of line for 21 years from 23rd March 1859, subject to 2,000*l.* a year rent, less income tax and tenant's proportion of poors rate.

Dublin and Drogheda.—Agreement for station services and accommodation at Drogheda station, 1,000*l.* a year, liable to be terminated at six months' notice by either party.

Ulster.—The like at Portadown station, 675*l.* a year for three years, from 1st July 1865.

Dublin and Drogheda.

No Agreement.

Dublin and Meath.

Midland Great Western.—Award between the Dublin and Meath and Midland Great Western Companies, dated 29th July 1861, whereby it is arranged to exchange for a period of 10 years the traffic between Dublin and Dublin and Meath stations; four trains each way to be run on week days, and two trains each way on Sundays.

Dublin and Drogheda.—Award between the Dublin and Meath and Dublin and Drogheda Companies, dated 30th October 1862, under which the Dublin and Meath Company pays certain tolls and station rents, junction signal expenses, &c., for making the Dublin and Meath's running powers over the Navan and Kells section of the Dublin and Drogheda railway.

Dublin, Wicklow, and Wexford.

Dublin and Kingstown.—The only "agreement" to which this return refers can, as regards the Dublin, Wicklow, and Wexford Company, only embrace the lease of the Kingstown railway and agreements with the Kingstown Company, all of which are by agreement for a lease of the line for 999 years from the 1st January 1865 cancelled, the latter may be said to be the only agreement. The lease is not yet perfected.

Great Southern and Western.

Cork and Limerick Direct.—Agreement, dated 6th September 1862, for five years for working at 40 per cent. of the receipts.

Cork, Youghal, and Queenstown.—Agreement, dated 11th February 1865, to purchase that line for 310,000*l.* of Great Southern and Western original stock, upon obtaining an Act for that purpose.

Meantime, by agreement for lease, dated 1st April 1865, the Great Southern and Western work the line for three years, at 13,950*l.*, being 4½ per cent. on 310,000*l.*, or in case of a higher dividend being paid on such stock, then the rate of such dividend.

Irish North-western.

1. *Londonderry and Enniskillen.*—Agreement, dated 17th March 1860, for a lease of the Londonderry and Enniskillen Railway, plant, rolling stock, &c., for 35 years, from 31st December 1859, to be perpetually renewed for successive terms of 35 years each, rent 26,000*l.* a year, and if after 1862 the Irish North-western Company's receipts (exclusive of its receipts from the Clones and Cavan Branch) exceed 95,000*l.* in any year, then the rent to be increased by 20 per cent. of such excess. If the rent for any year shall reach 33,000*l.*, that sum to be thenceforth the fixed yearly rent.

2. *Enniskillen, Bundoran, and Sligo.*—A provisional agreement, at present undated, for working, and maintenance, and conduct of traffic at 2*s.* per train mile, for 10 years from the opening for public traffic.

3. *Finn Valley.*—Provisional agreement, dated October 1861 and 5th September 1863, for working, and maintenance, and conduct of traffic, for 35 per cent. of the traffic earnings of the Finn Valley for 10 years from 1st November 1862.

4. Heads of a provisional agreement, dated 11th May 1865, with the Dundalk and Greenore, and London and North-western, for through booking arrangements, and for working, management, and maintenance of a proposed line between Dundalk and Grenore.

Midland Great Western.

Grand Canal Company and Great Southern and Western Railway Company.—Lease of the canal dated 1st August 1853, for 10 years, from 1st July 1853, at a rent of 19,565*l.* 11*s.* 11*d.*

Great Southern and Western.—Reference dated 23rd September 1859 as to disputes with that company.

Grand Canal Company and Great Southern and Western Railway Company.—By deed of submission dated 23rd February 1860 a certain sum was agreed to be paid to the canal company by the two railway companies, subject to procuring an Act of Parliament. The award of the arbitration settles the terms of purchase. The Bill for purchase of the canal was promoted in 1860, but was not passed.

Great Northern and Western.—Agreement dated 22nd June 1857 to withdraw oppositions to Bills then in Parliament. The Midland Company to subscribe to the Great Northern and Western line, and to work its traffic. Terms to be ratified by subsequent Act of Parliament.

Agreement dated 1st August 1859 as to the mode of constructing the Great Northern and Western line and terms for conducting the traffic by the Midland Great Western. This agreement was assented to by the shareholders and approved by the Board of Trade 16th August 1859.

Athenry and Tuam.—Agreement dated 15th June 1858 to abandon opposition to the Bill in Parliament for this line. Power to be taken to lease the same by the Midland Company. Proviso not to extend the Athenry and Tuam line to Castlebar and other towns.

Agreement dated 26th April 1859 to lease the Athenry and Tuam line for 10 years at a rent of 4,000*l.* per annum. The line not to be extended to certain towns north of Tuam.

Magnetic Telegraph Company.—Indenture of 1st January 1859 for 14 years to reconstruct the Midland Company's line of telegraph from Dublin to Galway, with new lines to Cavan and Longford.

Dublin and Meath.—Agreement dated 3rd April 1861 for withdrawing by the Meath Company a certain Bill then before Parliament, and referring to arbitration the terms on which the traffic of the Meath line should be carried over the Midland line.

Newry and Armagh.

Newry, Warrenpoint, and Rostrevor.—Agreement, dated 22nd May 1863, for working the Junction (Dublin Bridge), each company paying a moiety (on their traffic) of the expenses.

Ulster.—Agreement on the award of Captain Rich, dated 12th February 1865, for working this Company's traffic at Armagh.

Traffic agreements have been made at different periods between this Company, the Dublin and Belfast Junction, the Ulster, the Irish North-western, the Dublin and Drogheda, and the Newry, Warrenpoint, and Rostrevor Companies for the section of the line from Newry to Goraghwood. The Dublin and Belfast, and Ulster Companies refuse a reciprocity of arrangement with this Company on that section of the line from Goraghwood to Armagh.

NEWRY, WARRENPOINT, AND ROSTREVOR.

Newry and Armagh.—Agreement, dated 15th March 1859, by which that Company admitted its repudiation of agreement of 1857, to lease the Warrenpoint line, and agreed to form a junction between the two lines at joint expenses. But after such junction was made the Newry and Armagh Company promoted an opposition line running parallel with the Newry and Warrenpoint Company's line, called the Newry and Greenore Railway, and otherwise impede the developing of the traffic.

Dundalk Steam Packet Company.—Agreement, dated 31st August 1859, for loading and discharging all English traffic at Warrenpoint, paying 1*s.* per ton.

ULSTER.

1. *Portadown, Dungannon, and Omagh.*—Lease for 999 years at 5,250*l.* half-yearly rent till the gross recepts amount to 11,500*l.* half-yearly. When gross receipts shall exceed 23,000*l.* per annum and shall not exceed 25,000*l.* per annum, the rent shall be 10,500*l.* per annum, and half of receipts above 23,000*l.*, payable half-yearly. When gross receipts shall exceed 25,000*l.* per annum and not exceed 30,000*l.*, the rent shall be 47½ per cent. of the receipts, payable half-yearly. When gross receipts shall exceed 30,000*l.* per annum and shall not exceed 36,000*l.*, the rent shall be 50 per cent. of the receipts, payable half-yearly. When gross receipts shall exceed 35,000*l.* per annum, the rent shall be 55 per cent. of the receipts.

2. *Banbridge, Lisburn, and Belfast.*—Lease agreed on but not yet executed. The line is worked by the Ulster Company in accordance with the terms of such lease for 21 years, from 13th July 1863. Rent payable half-yearly according to a schedule in such lease, which regulates the payments by a scale rising from 20 per cent. so long as the half-yearly receipts do not exceed 3,000*l.*, to 55 per cent. when the half-yearly receipts reach or exceed 7,000*l.*

3. *Dublin and Belfast Junction.*—Agreement for three years from 1st July 1865, to render station services, &c. at Portadown station to the Dublin and Belfast Junction Company for 675*l.* per annum, payable half-yearly.

4. *Newry and Armagh.*—Under the awards of Captain Rich, R.E., of 17th June and 25th August 1865, and of the Board of Trade dated 20th June 1865, the Newry and Armagh Company to make, repair, and maintain the junction with the Ulster line, and points, signals, &c., paying 100*l.* a year for attendant at points and signals and incidental expenses for such junction, points, and signals. For goods loaded or unloaded for the Newry and Armagh Company at the Armagh station of the Ulster Company, 7*d.* per ton, and for minerals 2*d.* per ton, to be paid to the Ulster Company by the Newry and Armagh Company. The Newry and Armagh Company to pay the Ulster Company for the use of the portion of the Ulster Railway near the junction, 221*l.* 10*s.* annually, and for the use of the Armagh station 233*l.* 6*s.* 8*d.* annually, and towards the expenses of working the Armagh station 180*l.* annually.

5. *Irish North-western.*—This Company is paid by the Ulster Company 245*l.* 16*s.* 4*d.* per annum as rent for the use of the Omagh joint station, the Ulster Company bearing a proportion of the expenses of working the traffic, &c. at the station by both companies jointly.

6. *Irish North-western.*—This Company is paid by the Ulster Company 430*l.* per annum for transacting its passenger and parcel traffic, for the use of engine shed and turntable, and for working signals at the Clones station. The Ulster Company pay for traffic services 6*d.* per ton on first-class goods, 1*s.* per ton on general goods, and 1*s.* per waggon for cattle.

7. *Belfast and Northern Counties.*—Agreement, dated 12th August 1865, determinable at three months' notice, for through traffic between Belfast and Londonderry, viâ Omagh and viâ Coleraine. From the receipts by both routes 12½ per cent. to be allowed to either route for working expenses for passengers, parcels, horses, carriages, dogs, &c. From the recepts for goods and cattle 33⅓ per cent. to be allowed to either route, together with cartage of goods. The division of the balance for passenger traffic is 75 per cent. by Coleraine route, and 25 per cent. by Omagh route; for goods traffic 66⅔ per cent. for Coleraine route, and 33⅓ for Omagh route.

WATERFORD AND LIMERICK.

Working Agreements.

Limerick and Foynes.—From 1st November 1863, for 3,700*l.* a year, to find three trains in summer and two in winter each way daily, except specials and Sundays, for which 2*s.* per train per mile is to be paid.

Limerick and Castleconnell.—From 20th July 1860 to 12th April 1868; haulage 1*s.* 11*d.* per train per mile.

Limerick and Ennis.—From 23rd April 1861, for 20 years, at 45 per cent of the receipts.

Waterford and Kilkenny.—From 31st January 1863, for five years at 43 per cent. of the receipts.

Kilkenny Junction.—From 1st March 1865, temporarily; 2*s.* 3*d.* per train per mile for a two train service, and 1*s.* 11*d.* per train per mile for a three train service.

Athenry and Ennis Junction (line not open).—From 27th May 1863, for 20 years, at—

s.	*d.*		
2	6	per train per mile for	1 train.
2	0	,, ,,	2 trains.
1	10	,, ,,	3 ,,
1	9	,, ,,	for more than 3.

Rathkeale and Newcastle Junction (when opened).—From 19th December 1863, for 20 years—

s.	*d.*		
2	3	per train per mile for	2 trains.
1	11	,, ,,	3 ,,

until receipts reach 10*l.* per mile per week in any year ending 31st December, then working to lapse into 45 per cent. of receipts for term out. Option of ultimate purchase by the Waterford and Limerick Company reserved on giving four per cent. on ordinary capital.

WATERFORD AND TRAMORE.

Return No. 4.

Particulars of Goods Traffic.

N.B.—The Questions were—

"State the following particulars respecting the ten principal items of your goods traffic.

"The weight carried, and the amount of earnings each way, up and down the line, for the last five years.

"Also the rates per mile and terminal rates charged, with all changes in the rates during that period."

As, however, many companies stated it would be impossible to make such a comprehensive return, they were requested to give the best information in their power.

Belfast and County Down.

—	1862.		1863.		1864.	
	Tons.	£	Tons.	£	Tons.	£
Coal - -	10,886	914	8,779	714	9,959	712
Minerals -	3,973	249	13,186	915	13,091	944
Merchandise -	29,743	5,732	37,353	6,456	38,082	7,865
Totals -	44,602	6,895	59,318	8,085	61,132	9,521

Total of Goods Traffic for 1864, 61,132 tons, 9,521*l.*, comprised of the following items:

——	—	—	Average per ton per mile.
	Tons.	£	*d.*
Coal - - -	10,000	700	1¼
Stone - - -	8,000	500	1¼
Lime, sand, and brick -	5,000	450	1¼
Breadstuffs - -	10,000	1,400	1¾
Flax and tow - -	3,000	650	1¾
Grain - - -	3,000	400	1¾
Potatoes - - -	1,500	250	1¾
Pork - - -	1,000	200	2½
General merchandise -	19,500	4,950	—
	61,000	9,500	—

With respect to the rates charged this company has not been able to attain the desirable simplicity of charges calculated at uniform rates per mile, owing to the competition by road to which it is exposed at different points of its system, but those quoted may be taken as a fair average for the line.

No material change has been made in this company's rates since 1861.

Belfast and Northern Counties.

Average Rates per ton per mile.	——	1863.		1864.	
		Tons.	£	Tons.	£
2	Grain - -	40,577	9,082	34,515	7,008
2	Potatoes -	1,538	226	532	120
2½	Pork - -	3,409	1,495	4,052	1,729
2¼	Linens -	4,333	1,855	4,333	1,958

2	Timber -	3,068	822	3,687	912
1½	Coals - -	35,946	5,145	33,432	4,785
		103,503	*25,417*	*96,201*	*24,229*

Exceptions.

Belfast and Cookstown, Indian meal, Indian corn and wheat 6*s.* 9*d.* per ton = 1½*d.* per ton per mile.

Belfast and Newtownlimavady, flour 10*s.* per ton = 1½*d.* per ton per mile.

Belfast and Newtownlimavady, potatoes 7*s.* 6*d.* per ton = 1$\frac{1}{10}$*d.* per ton per mile.

Belfast and Londonderry, grain, 5 tons and upwards, 6*s.* per ton = ¾*d.* per ton per mile.

Cartage of linens, yarns, flax, and flaxseed, butter and eggs, at Belfast and Londenderry is included in the rate.

There has been so little deviation in these rates for the last five years, that it is not necessary to furnish the charges during that period.

The terminal expenses are included in the rates.

Cork and Bandon and Kinsale Junction.

	81,161	*12,485*	*23,626*	*4,713*	

Cork, Blackrock, and Passage.

No goods traffic on this line.

Dublin and Belfast Junction.

The ten principal items carried are, breadstuffs, ale and porter, whiskey, timber, coals, flax, linen, yarns, bale goods, and provisions.

Gross Traffic:

——	——	Revenue.
	Tons.	£
1860	113,444	20,661
1861	125,000	21,759
1862	131,678	24,012
1863	120,149	21,421
1864	122,602	20,858

The rates charged between Drogheda and Portadown, a distance of 56 miles, are, for—

——	Per ton.	*Per ton per mile.*
	s. *d.*	*d.*
1st class -	7 2	*1·54*
2nd „ -	10 3	*2·20*
3rd „ -	11 4	*2·43*
4th „ -	14 6	*3·10*
5th „ -	17 0	*3·64*
6th „ -	20 0	*4·29*
Breadstuffs -	8 6	*1·82*

These rates include terminal charges.

When large lots of goods offer, and are conveyed in full waggon loads, reductions are made to meet the particular cases as they arise.

Dublin and Drogheda.

Total Goods Traffic.

—	Tons.	Receipts.
		£
1860	82,062	23,324
1861	88,874	22,947
1862	88,938	24,459
1863	85,155	23,407
1864	80,044	22,871

The ten principal items are grain, groceries, bale goods, hardware, whiskey, ales, chandlery, oils, tobacco, provisions. It may be assumed that these items would form about three-fourths of the above tonnage.

The rates from Dublin to Oldcastle are—1st class, 6*s.* 8*d.*; 2nd class, 9*s.* 6*d.*; 3rd class, 11*s.* 2*d.*; 4th class, 14*s.* 3*d.*; 5th class, 16*s.* 10*d.*; smalls, 1*s.* 6*d.* These rates are never exceeded, but reductions are frequently made for quantities. When several waggon loads can be sent at once, the next lower class rate only is charged.

We have also special rates from Dublin to stations on the seaboard, where competition makes it impracticable to obtain the ordinary rates.

The rates between Dublin and Belfast are—1st class, 8*s.* 4*d.*; 2nd class, 10*s.*; 3rd class, 12*s.* 6*d.*; 4th class, 15*s.*; 5th class, 20*s.*; 6th class, 30*s.*; also a special classification for small quantities. These rates include terminals.

Dublin and Meath.

Only been open three years.

Rates are as follow, and have been so since the opening of the line with some slight exceptions :—

	Per ton per mile.
	d.
1st class, Draining tiles, lime - - -	1·44
2nd „ Flour, grain, timber - - -	2·25
3rd „ Grocery, ale and porter, heavy drugs -	2·81
4th „ Drapery, drugs, cutlery - - -	3·46
Cattle, Meath Stations to Broadstone - -	6·37

		1,292	*369*	*1,333*	*334*	*1,010*	*278*	*944*	*320*

2nd Class. *Grain, raw and manufactured, manure, and potatoes* are calculated at a uniform rate of about 1⅞*d.* per mile, which covers terminal charges.

3rd class, *Ale and porter, sugar, and timber*, about 2¼*d.* per mile, which covers terminal charges.

4th class. *Butter, fish, groceries, wine and spirits, and wool*, about 3⅛*d.* per mile, which covers terminal charges.

The goods rates generally have undergone little or no change within the last five years.

Great Southern and Western.

Five Years' Return on 11 principal Items.

—	Tons.	Receipts.
		£
1860	284,542	107,588
1861	319,966	119,677
1862	334,333	124,011
1863	305,310	115,100
1864	290,961	115,695

The *eleven* principal items are (1) grain, (2) drink, (3) provisions, salt and fresh, (4) timber, (5) manure, (6) groceries (including wines and spirits), (7) bale goods, (8) bricks, (9) ironwork, (10) potatoes, and (11) coal.

Rates charged.

	d.	
1. Grain - - -	1¼	per ton per mile.
2. Drink - - -	1¾	„ „
3. Salt provisions - -	1¾	„ „
4. Pitwood - -	0¾	„ „
4. Cut timber - -	1¼	„ „
5. Artificial manure -	1¼	„
6. Groceries - -	2½	„ „
7. Bale goods, including wool	2½	„ „
8. Bricks, tiles, slates, stone	0¾	„ „
8. Drain pipes - -	1¾	„ „

Exceptions.

Grain traffic from 1 to 50 miles, 1½*d.* per ton per mile ; 50 to 100 miles, 1¼*d* per ton per mile ; 100 miles and upwards, 1*d.* per ton per mile.

Coal ¾*d.* per ton per mile, with a minimum charge of 7*s.* 6*d.*

Guano, from 1 to 50 miles, 1¼*d.* per ton per mile ; 50 miles and upwards, 1*d.* per ton per mile, with a maximum rate of 10*s.* per ton.

At the principal seaboard points a reduction of 25 per cent. is made on these rates.

To meet special traffic when in large quantities, it is usual to reduce a class, a similar reduction being made to encourage traffic by through booking arrangements.

Newry and Armagh.

Places between which the highest passenger fare is charged?

Main line. Harcourt St. and Enniscorthy.
Kingstown line. Westland Row and Seapoint.

Places between which the lowest passenger fare is charged?

Main line. Harcourt St. and Bray.
Kingstown line. Westland Row and Kingstown.

Are market tickets issued? If so, between what places, and at what proportion of the single fare?

Yes; from Dublin to each station to Kingstown inclusive, and from these stations to Dublin on Kingstown line.
From Dublin to each station to Bray inclusive, and from these stations to Dublin on main line.
At about half the single fare.

PARCELS.—What are the rates for parcel traffic, according to weight and distance?

	Light Parcels. Up to 7 lbs.	8 to 14 lbs.	15 to 28 lbs.	29 to 56 lbs.	57 to 84 lbs.	85 to 112 lbs.	Every further 14 lbs. or part of 14 lbs.	Heavy Parcels. Above 1 cwt. every fraction of ¼ cwt. being charged as ¼ in proportion, after the first cwt.

Places between which the highest passenger fare is charged?

The above is the scale on which all the ordinary fares of this Company are intended to be calculated. If there be any variation from it, it is accidental, save in the cases specified below.

Places between which the lowest passenger fare is charged?

Excursion tickets between the principal stations on this Company's system, and Dublin, Killarney, &c. &c., are issued at very low fares.

Are market tickets issued? If so, between what places, and at what proportion of the single fare?

Yes, at about ½*d.* per mile on market days, between Inniskeen and Dundalk, Rockconey and Clones, Cootehill and Clones. Between Clones, Newtownbutler, Lisnaskea, Maguiresbridge, Lisbellow, Omagh, Fintona, Dromore Road, Loutherstown Road, Ballinamallard, and Enniskillen. Between Ballybay, Rockcorry, Cootehill, and Monaghan. Between Ballybay, Rockcorry, Cootehill, and Armagh, and between Dromore Road and Omagh.

Terminal rate of 3*d.* under 56 lbs.

The maximum Parliamentary fares, stated in *italics*, have been taken from the Acts of Parliament, not being returned by this Company.
The return of maximum Parliamentary fares, made by this Company, is inaccurate.

APPENDIX AX.

IN accordance with a resolution of the Commission, extracts were made of portions of the Evidence which affected several of the Irish railways, and sent to the respective companies with a letter asking if they had any explanations or remarks to make on the same.

The following are the answers received:—

The Midland Great Western Company sent no reply.

The Belfast and Northern Counties Company expressed a wish that their manager, Mr. Cotton, should be examined in explanation, and his evidence will be found in the proper place.

No. 1.—CORK AND BANDON RAILWAY.

Extracts of Evidence sent to the Company.	*Replies received.*
2090. (*Chairman.*) Can you name any other description of traffic which you think would be developed in Ireland by low fares?—I would say generally that there might be a large traffic in most articles of agricultural produce. More cattle, for example, would be sent upon the railways than now. On the Bandon line no cattle are now carried; they are all walked from Bandon to Cork.	2090. We carried for the year 1864, 1,286 cattle, 2,125 sheep, 33,896 pigs; our charges are moderate and no complaints; but on short lines such as the Cork and Bandon Railway light cattle are seldom carried, the distance being by road only about 13 miles.
2091. (*Capt. Galton.*) Have they ever been carried on that line?—They have to some small extent.	
2092. Is the fare higher now than it was then?—Much higher.	
6384. Have you had abundant opportunities of forming an opinion as to the system under which the Cork and Bandon railway has been managed?—Yes, for years.	
6385. Will you state your opinion to the Commission as to whether that railway has been managed in a manner either most profitable to the shareholders or most advantageous to the public?—My opinion is that it has not been so managed, which has been very much owing to the great original cost of the railway. The shareholders have no direct interest, and they feel that they have none in the line. It has consequently got into the hands, I believe, of the preference shareholders, who cannot increase their profits from it beyond a certain point. I believe that that is the cause very much of the inefficient manner in which the railway is worked.	6385, 6386. This is not the fact, as the directors (seven) hold over 400 original shares, besides preference.
6386. Do you think that the directors have no interest whatever in endeavouring to increase the traffic beyond its present amount?—No, I think that they have no interest, and no hope of getting more on their original shares, which are a 5 per cent. security, and they have no object in working it up beyond that very much.	
6387. Is it your opinion that there are sources of traffic which are undeveloped and which traffic might be brought into that railway?—I think so.	
6388. Of what character is it?—General agricultural produce. The town of Bandon is within 20 miles of Cork, and it is a very common practice for the farmers there to send their farm produce by their own conveyances to Cork, and I feel certain that if there was a better system of management a great deal of that produce could be brought on to the railway.	6388. Every facility is given, but the bulk of the farmers living adjacent or beyond Bandon sell in that town, there being several buyers who again ship at Collier's Quay, a small creek within three or four miles of Bandon, or send by railway to Cork, as may be their convenience. Our rate is low, only 3*s.* 6*d.* per ton; we conveyed for the year 1864, 2,868 tons inwards.
6389. Are complaints made that the charges for the carriage of agricultural produce on the Cork and Bandon line are so high as to prevent the farmers from sending their produce to market?—Certainly. They want a system in Cork for the purpose of conveying agricultural produce to the markets, and there should be an organized system for bringing the produce to the markets from the railway station. The railway company have not a good system at work; they have for the butter, but I do not think they have for the corn; and even with the butter it is a general complaint that it is rather late in the market.	6389. This is not the case, the corn in Cork is not generally taken to the market, as it is sold there by sample, and when sold carted from railway terminus to the corn stores of buyer. Butter on the contrary must go to the market to be qualified. Charges as low as any other line (20 miles in Ireland) and cheaper than some.
6390. Have you ever considered whether, if that railway were in the hands of parties who leased it, they could work it with advantage and profit, and whether there are means by which the traffic upon the line could be largely increased?—I have not the slightest doubt of it.	
6391. (*Lord Donoughmore.*) There are some extension lines, I believe, in the course of construction from the Cork and Bandon line towards the western counties?—Yes.	
6392. Can you give any evidence as to the effect which the condition of the Cork and Bandon Company has had upon those extensions, or is it the fact that the condition of the Cork and Bandon Company has had the effect of impeding the construction of further extensions towards the western counties?—I have no doubt of it; they have not entered heartily into those extensions as they would do if their interest was directly in the line.	

No. 1.—Cork and Bandon Railway—*continued.*

Extracts of Evidence sent to the Company.

6393. Are the shareholders quite content to leave the management of the line in the hands of those representing only the preference shares?—I suppose that they have no hope of getting anything for their shares, a they are unsaleable in the market, and there is very little hope of their getting anything like a dividend on the original shares, and they therefore take no interest in the thing.

6394. (*Mr. Hamilton.*) Do you think that the directors derive their qualification from the preference shares only?—No, I do not think that; I suppose that they are qualified by being holders of original shares, although they are so worked that a gentleman holding 1,000*l.* worth of them can qualify any person he pleases.

6397. (*Mr. Horsfall.*) You have spoken of the original cost of the line as being very heavy, can you state what it was per mile?—I cannot say, but I believe it was between 17,000*l.* and 20,000*l.* a mile for a single line, and carried through a country giving hardly any business, as between Cork and Bandon.

6398. (*Lord Stanley.*) Is it not the fact that this is a line of railway that never ought to have been made, and for which there was not sufficient traffic to maintain it?—I can hardly say that, but if it were made now, I believe that it could be made for 6,000*l.* or 8,000*l.* a mile.

6401. (*Sir R. Hill.*) What was the cause of the excessive expenditure upon the line?—It is taken over a mountain, and they had an immense deal of cutting and viaducts, and all sorts of tunnels, and it was a very expensive line to make.

6402. Was there any waste of money beyond that which arose from taking an improper route?—There were two or three competing lines, and there was much money wasted in engineering and law expenses.

6403. (*Lord Donoughmore.*) Was not the engineer a very incompetent man?—I believe so. He had had no experience in railway work.

6466. What was the original cost of the line?—The whole cost of the line was about 325,000*l.* for 20 miles of railway, and that was about 18,000*l.* a mile.

6467. For a single line?—Yes; that was the amount of share capital that was made away with. But it was in endless difficulties before it was opened. It was for many years almost an insolvent concern. The chairman committed suicide, and the shareholders gave it up, and it was at last taken up by the preference shareholders only, who obtained some exclusive powers enabling them to appoint directors, and they contrived to get the line opened.

6468. The railway is at present managed by persons who are preference shareholders?—By the first preference shareholders, who hold 48,000*l.* of capital. They have the entire management of the whole thing.

6469. Where do the directors reside?—They reside in Dublin chiefly. Mr. Valentine O'Connor, one of the directors of the Great Southern and Western Railway, is the chairman, and Mr. Greere, I think, is vice-chairman; but none of them are local people. I believe there are one or two local directors in Cork, but it is only as directors appointed by the preference shareholders that they manage things as they are managed.

6476. I suppose those shares representing 175,000*l.* of original capital have no price in the market?—Only about 10*l.* for a 50*l.* share, the want of any extensions very much influencing the value of them. I believe that the greater part of them are now held by persons who have bought them at the rate of from 10*l.* to 12*l.* for a 50*l.* share, and very few original shareholders remain in the company at all.

6480. Your complaint, I understand, is this; that the present managers of this railway, from the fact of being interested only in 48,000*l.* of preference capital, upon which they receive a dividend, have no interest in developing the traffic?—That is the real source of our difficulty in the western parts of the county. If there was a solvent company, having the management in its hands, inasmuch as the whole of the traffic from additional extensions must pass over the line, they would promote extensions to a much greater extent for that purpose.

6481. Has the policy of the present managers been to prevent, or stand in the way of extensions?—Not at all; it is only because they are in a dead lock; they say "we have no money;" that is the regular answer that is given.

6490. I perceive in an account rendered from the Exchequer Loan Commissioners that the company is in arrear to them, both with regard to principal and interest. Do they not take care to have the first charge paid?—I have watched the accounts for many years, and I have never observed that the first preference shareholders have not got their dividends. The second preference shareholders have been many times without them.

6491. (*Mr. Horsfall.*) Do not the Exchequer Loan Commissioners take precedence of the preference shareholders?—I think the Exchequer Loan Commissioners have got their interest.

Replies received.

6394. None of the directors have a fictitious qualification, each of the seven directors holding from 50 to 60 originals each, besides preference shares.

6397. Though this line is only laid for a single line, it is to be borne in mind that we have purchased land for a double line, and that all our works, such as tunnels, bridges, with the exception of the Innoshannon viaduct which is iron work, are made for a double line.

6398. The traffic receipts have increased from the opening of the line 8*l.* 5*s.* per mile to nearly 20*l.* per mile.

6401. The railway panic set in when the line was at its commencement, shareholders became frightened, transferred to paupers, calls were not responded to, financial embarrassment consequent thereon and credit contract at ruinous prices to furnish the line, and litigation.

6402. There was no competing line before Parliament, there was opposition by landlords OF COURSE, one of whom had to be paid 1,000*l.*

6467. The preference shareholders have obtained no exclusive power.

6468. The directors are original shareholders, as well as preference, 415 original shares being in their hands.

6469. There are four directors in Dublin, and three in Cork; it is incorrect the statement of their being appointed by preference shareholders, 78,000*l.* preference, against 240,000*l.* originals.

The former form the board, and the latter a committee to attend to the traffic and working of the railway.

The directors hold 20,750*l.* original stock, and 11,825*l.* No. 1 and 2 preference.

6476. There are a good many shareholders who took those shares originally and paid 50*l.* per share on the register; the price for the last four or five years varied from 14*l.* to 18*l.* They are now 14*l.*

6481. The directors were always most anxious to extend, and invariably received great opposition from the landed gentry. The various attempts cost the company 11,740*l.*

6490. The Exchequer Loan Commissioners have been paid both principal and interest to last May; the amount of loan was 31,000*l.* out of which they have been paid by yearly instalments, 18,911*l.*

One year's interest due to the No. 2 preference shareholders.

6491. The interest paid with each instalment four times a year.

No. 1.—Cork and Bandon Railway—*continued.*

Extracts of Evidence sent to the Company.

6492. (*Mr. Glyn.*) According to the return I have before me, they certainly appear to be in arrear. The total advance made by the Exchequer Loan Commissioners to the Cork and Bandon Company amounts to 35,000*l.*; the company have repaid part of that amount, but there is a balance outstanding, and there is an arrear upon the principal and also upon the interest. I therefore cannot understand how the preference shareholders could have received their dividends?—I can state as a fact that I have watched the accounts very closely, and that there has never been for years past any statement that the first preference shareholders did not receive their interest somehow; the second, or number two, preference shareholders have continually gone without their interest. In the account that I obtained, it did not distinguish between the amount owing to the Exchequer Loan Commissioners and what they called mortgage loans; they were all put together, and they amounted to 71,000*l.*

Replies received.

6492. The amount of loan to be paid to the Loan Commissioners, 12,676*l.* 10*s.* 0*d.*, in yearly instalments of 1,882*l.* 7*s.* 0*d.*, with interest on loan.

Interest Statement, 30th June, 1865.

—	Amount. £ s. d.	Rate of Interest. Per cent.	Annual Interest. £ s. d.
By amount borrowed from Public Works Loan Commissioners on Mortgage	12,676 10 0	4	507 1 2

	80,000 0 0	—	—

6494. Who elects the directors?—I believe the preference shareholders exclusively.

6494. No such thing; the shareholders generally.

6509. You would deal with the preference shareholders?—Yes, exclusively. If it was a landed proprietor's estate which had had a first mortgage upon it for 15 years, it would be wound up.

6510. You mean that you must buy them up?—No doubt.

6511. You must pay them off or deal with them at the price at which they will sell?—Yes; but I imagine that they have never been well pleased with their bargain, and I do not think that it has been looked upon as a very valuable security.

6511. The No. 1 preference shares excellent security, 5½ per cent. per annum; always at a premium in the market.

6512. And you would improve the security by the fact of paying them off?—Yes.

6513. (*Chairman.*) What price do the preference shares fetch in the market?—I do not know; they are so seldom sold, being in so few hands, and representing so small an amount, 48,000*l.*

6513. The No. 1 preference shares are 6*l.* 5*s.* paid in full; sell from 6*l.* 12*s.* 6*d.* to 7*l.* per share.

6514. (*Mr. Glyn.*) Are the directors selected exclusively from the preference shareholders?—I believe so. I wish to add that the present actual traffic on the Cork and Bandon of 20,000*l.* per annum proves clearly that the traffic of the West Riding would be sufficient to pay a fair interest on all extensions that are required to give full railway accommodation to the whole district. If such extensions were made at a moderate cost, say 6,000*l.* per mile, and if the incubus of the extravagant cost of the existing lines could be arranged.

6514. They are not; nor could it be done.

No. 2.—Dublin and Belfast Junction Railway.

2074. (*Mr. Horsfall.*) Have you heard any complaints in Ireland as to the unequal rate of charges between town and town?—Yes; as an instance I may mention the case of the Mining Company of Ireland. We have only one smelting works in the whole country, namely, the smelting works for lead and silver near Dublin. Considerable quantities of sheet and pipe lead, shot and red lead are made there. The margin for profit must be very narrow, considering that we have to import the coal, and have to pay for labour, labour being dearer in Ireland than it is in England, although, and indeed because, the wages are so much lower. The rate from Dublin to Newry by rail is 15*s.* per ton for lead, and the rate to Belfast is 12*s.* by rail. It is cheaper to send it the whole of the way to Belfast than to the intermediate station of Newry.

2074. The rates for street and pipe lead from Dublin to Belfast by sea is 10*s.* per ton, exclusive of charges for landing, &c.; and by rail it is 12*s.* 6*d.* per ton.

The rate from Dublin to Newry main line is 14*s.* 10*d.* per ton for lots under three tons, and 12*s.* 9*d.* for lots of three tons and upwards.

2075. What is the mileage to Newry?—It is very nearly 70 miles to Newry, and 113 miles to Belfast.

2075. The distance from Dublin to Newry main line station is 69½, and to Belfast 113 miles.

2076. (*Mr. Glyn.*) Is that inequality caused by the competition of the railways?—There are three lines in that distance. It is carried 113 miles for 12*s.*, and by steamer for 10*s.* 1*d.*, and it is carried to Newry, which is not quite 70 miles, by rail for 15*s.*

2076. For several years after the railway was opened through to Belfast there was a very keen competition between the railway companies and the City of Dublin Steam Packet Company for the traffic, during which goods were carried at little more than nominal rates by both sea and rail. Ultimately an arrangement was made, and the rates were increased, but still remained considerably under those to other places by rail. There being no competition of this nature between Dublin and Newry, the ordinary rates were not disturbed, and hence the difference between them and the rates to Belfast.

4964. (*Chairman.*) You are, I believe, the secretary of the Newry and Armagh Railway Company?—Yes.

4965. Have you any statement to make with reference to the traffic on your railway?—Our traffic is very seriously interfered with by the competitive measures of the companies with which we are connected. The Ulster Company, which joins us on the north, has possession of a line from Belfast to Monaghan and Clones; and then the Dublin and Belfast Junction Company, which is one of the lines between Dublin and Belfast, joins us at the southern end; and between those two companies a system has been pursued for the purpose of diverting the traffic from our line. The existing lines between Newry and Armagh may be described as a triangle, of which our line forms the hypothenuse, there being communication *viâ* Portadown by the other two sides. Of course we have the opportunity of carrying the traffic at much lower rates than the other

No. 2.—Dublin and Belfast Junction Railway—*continued.*

Extracts of Evidence sent to the Company.

companies, and if we were not interfered with we should, I may say, command the entire of it. We have applied to them for through rates over our system to the various stations with which we do business, but that has been refused, with the exception of to and from the town of Newry. They agreed upon through rates with us in reference to Newry, but upon the new section of our line, which is between Goragh Wood and Armagh, which was opened in August last, they have refused us.

4966. (*Mr. Glyn.*) They will take any traffic from you which you give them which goes from Newry to Armagh, but they will not give you any traffic at Armagh to take to Newry?—No, except that which they cannot avoid. They will send it round by the old route, that is by Portadown. Our business communications and the trade of the port of Newry lie very much in the Monaghan and Clones districts, to which we have no independent access. The Ulster Company wish to draw the trade to Belfast, and they do that by giving low rates to merchants in that locality, and refusing the Newry and Armagh Company.

4967. What is the class of traffic that comes from Monaghan and Clones?—That is chiefly inwards traffic from Newry. There is not much export trade from that district to Newry. The trade consists chiefly of importations from Newry.

4968. Of what sort?—Coals, grain, timber, and iron.

4969. Is there much coal traffic?—It varies.

4970. Will not they give you through rates for that coal traffic to Monaghan and Clones?—They refuse through rates, and of course the coal traffic is included. There is a great deal of traffic in grain and bread stuffs in that district, and there are some extensive mills. There is also a traffic in slates, timber, and agricultural produce.

4971. Do they want to force you to amalgamate with them?—They do not want us to amalgamate, but they want us to agree to a proposition which they made, that the two routes, namely, the direct route between Newry and Armagh, which belongs to our company, and the route through Portadown, which belongs to the two companies I have spoken of, should be placed on terms of equality as regards fares and rates.

The fares were arranged on the basis of the shorter distance, and stood thus:—

	s.	d.		s.	d.
First class - - -	3	8	From Goragh Junction	3	2
Second „ - - -	2	9		2	5
Third „ - - -	1	10		1	7

From the Dublin and Belfast Junction Company's main line station, which is a mile from the town of Newry—

First class, 3*s.* 4*d.* Second class, 2*s.* 6*d.* Third class, 1*s.* 8*d.*

Before assenting to the proposition of booking by both routes at equal fares and rates for other portions of the through traffic, the Newry and Armagh Company required the Dublin and Belfast Junction and Ulster Companies to charge the same mileage rates for the long distance that they charged on the direct route, the effect of which would have been to make the fares from Newry main line and Goragh 1*s.* 2*d.*, 10*d.*, and 7*d.* higher than they had been for the previous seven years.

4972. That the charge should be equal for the long distance and the short distance?—Yes.

4973. And that you should divide the traffic?—Yes, practically.

4974. (*Mr. Glyn.*) How many miles do they carry their railway in competition with you?—29 miles, and the direct route is 21 miles, so that there is nearly a difference of one third in our favour. So far as passenger traffic is concerned, we should get it, but with regard to goods traffic, the distance does not tell materially in our favour.

4975. You do get passenger traffic?—So far as Armagh is concerned, but not as far as Monaghan and that district is concerned.

4990. When did you open your line?—We opened the section from Gorah Wood on the 25th of August last. Since then we have been completely without through traffic, nothing but the local traffic of the district, which hardly pays working expenses. The southern portion of the line from Newry to Gorah Wood has been opened since 1854.

Replies received.

4966. Traffic from stations on the Dublin and Belfast Junction Railway for Armagh or stations beyond, and intended to pass over the Newry and Armagh Company's line, has been booked to Goragh Junction at the local rates, and the waggons allowed to go through.

4967. The Dublin and Belfast Junction Railway forms a portion of the trunk line between Dublin and Belfast. It is joined at Goragh Junction by the Newry and Armagh line 3¼ miles from Newry; and over this portion of that line there has been through rates and arrangements, and a free interchange of traffic, for the last ten years.

Traffic from Newry for Armagh and other stations on the Ulster Railway was sent *viâ* Portadown, the only route open until August 1864, when the line between Goragh and Armagh was opened.

As the Dublin and Belfast Junction and the Ulster Company had afforded facilities for developing the traffic of Newry by charging the same fares *viâ* Portadown to Armagh as if the direct line was made, they, prior to the opening of the shorter line, proposed, to prevent any unnecessary competition, to carry at the same fares and rates by both routes; but this was declined by the Newry and Armagh Company, except on terms which would have the effect of giving them the whole of the traffic.

4971. So far back as 1857, when the Newry and Armagh Company obtained powers to extend their line from Goragh to Armagh, the distance from Newry to Armagh was stated to be 22 miles by the direct route, and *viâ* Portadown 29 miles.

4973. The charges being equal, each party would do their best to obtain a share of the traffic; and the public would have a choice of routes, the Newry and Armagh Company having the advantage of the shorter distance.

4974. The distance *viâ* Portadown is 29 miles. The Ulster Company's trains from Armagh meet the through trains between Dublin and Belfast at Portadown; and the two companies wish to afford the public facilities for the use of their lines at the same cost as by the shorter route, both for traffic to Newry and to stations south of Goragh Junction.

4990. The two companies have always been willing to afford facilities for through traffic to the Newry and Armagh Company, and are even now endeavouring to effect an arrangement with that company on the basis of equal fares and rates, and leaving it to the public to make their choice as to the route by which they will travel or forward their goods.

No. 3.—Dublin and Drogheda Railway.

Extracts of Evidence sent to the Company.

2074. (*Mr. Horsfall.*) Have you heard any complaints in Ireland as to the unequal rate of charges between town and town?—Yes; as an instance I may mention the case of the mining company in Ireland. We have only one smelting works in the whole country, namely, the smelting works for lead and silver near Dublin. Considerable quantities of sheet and pipe lead, shot and red lead are made there. The margin for profit must be very narrow, considering that we have to import the coal, and have to pay for labour, labour being dearer in Ireland than it is in England, although, and indeed because, the wages are so much lower. The rate from Dublin to Newry by rail is 15*s.* per ton for lead, and the rate to Belfast is 12*s.* by rail. It is cheaper to send it the whole of the way to Belfast than to the intermediate station of Newry.

2075. What is the mileage to Newry?—It is very nearly 70 miles to Newry, and 113 miles to Belfast.

2076. (*Mr. Glyn.*) Is that inequality caused by the competition of the railways?—There are three lines in that distance. It is carried 113 miles for 12*s.*, and by steamer for 10*s.* 1*d.*, and it is carried to Newry, which is not quite 70 miles by rail, for 15*s.*

Replies received.

2074. The rate for sheet and pipe lead from Dublin to Belfast is 10*s.* per ton by sea, this rate does not include the charge for loading. The rate by rail is 12*s.* 6*d.* per ton.

The rate from Dublin to Newry main line is 14*s.* 10*d.* per ton.

2075. Newry main line is distant from Dublin 69½ miles, and Belfast 113 miles.

2076. The steamers compete with us to Belfast and do not admit of our getting remunerative rates. No such competition exists between Dublin and Newry.

No. 4.—Dublin, Wicklow, and Wexford Railway.

1929. Do you consider that the fares and rates of carriage for goods and parcels charged in Ireland are injurious?—I do.

Is too general a statement to answer.

1930. Do you consider that the produce of the mines and quarries and agriculture generally would be greatly benefited by a cheap scale of fares and rates?—Certainly.

The propositions are self evident.

1931. Are you of opinion generally that cheap rates and fares would stimulate trade?—Yes.

1932. Will you state your opinion as to the effect which you think will be produced by the diminution of fares?—I believe that the first effect would be a considerable development of mining; I also think that agriculture would be very considerably benefited, especially in the portions of the country which are most backward because most distant from the markets; I believe, as there is now a tendency to engage in manufacturing industry in Ireland, more than perhaps has existed for 20 or 30 years, that it will greatly stimulate that tendency.

To carry out the theory put forward in this reply, the greater the distance an article has to be carried the less should be the price charged for carrying it.

1933. Are there any facts upon which you ground your opinion, that a diminution of fares would be accompanied by a large increase of traffic?—I will first direct the attention of the Commission to two cases in connexion with mining, which will show what is the influence of the present rates of transport upon that branch of industry; I may observe that although we have a great number of mines in Ireland, they are not very rich and they are scattered through the country, many of them only giving produce of a low value, as, for example, sulphur ore, iron ores, and zinc ores. The present rates which are charged upon these products are exemplified in the case of the Wicklow Copper Mining Company. The Vale of Avoca is the centre of the largest sulphur mining operations perhaps in Europe. Formerly copper was extensively obtained there, but latterly, say for about the last 20 years, the sulphur ore has been the chief product, and from 80,000 to 120,000 or 130,000 tons annually have been exported. Iron ore is also found there in great abundance, and is now extensively worked. The distance from the Vale of Avoca, where the mines are situated, to the station at Kingstown is 39½ English miles, and the charge for the sulphur ore to that point is 4*s.* 3*d.* per ton, making consequently a rate of something more than 25 per cent. of the total value of the product, which is 16*s.* per ton free on board.

4*s.* 3*d.* per ton is the rate for carriage of sulphur ore. The service performed for this sum is as follows:—The ore is brought by horse power on a tramway a distance of nearly an English mile, it is taken out of the tramway waggon and put into the railway waggon, it is then drawn by locomotive to Kingstown station. The locomotive is here detached and the waggons are drawn by horse power over about half-a-mile of private railway to the shipping wharf, it is then put on board the ship; all this work is done by the railway company and has to be covered by the 4*s.* 3*d.* besides which even the accounts of the shipments and correspondence respecting orders for ore, transmission of bills of lading, &c., are managed by a clerk paid by the railway company; of course the empty waggons both tramway and railway have to be brought back for nothing.

1934. (*Earl of Donoughmore.*) That includes terminal charges?—Yes; the railway charge upon the iron ore is 3*s.* 9*d.* per ton.

1935. (*Chairman.*) Where is that from?—From the same locality to Kingstown. I take Kingstown, in the case of the sulphur ore, rather than the Harcourt Road Station, because practically very little except the local consumption of Dublin itself would be delivered there; 3*s.* 9*d.* per ton upon iron ore is very nearly 50 per cent. of the total value, because they have to pay, besides the 3*s.* 9*d.* for the carriage of it to Kingstown, a charge of 5*d.* per ton for taking it from the depôt at the mine to the station itself; so that virtually the charge is 4*s.* or exactly 50 per cent. upon the total value. Independently of the more valuable ore, there is an article called "smalls," which are the broken pieces, the value of which is only 6*s.* per ton, delivered free on board. They cannot send that at all, because the charge would be the same for that as upon the ordinary sulphur ore. It would be 4*s.* 3*d.* per ton to Kingstown, leaving, therefore, only 1*s.* 9*d.* as the margin for cost of production and profit. So that the present charge would be 72 per cent. of its actual value. The produce of this one mine for the year ending the 1st of March, 1865, was, of common pyrites, 30,600 tons; and of iron ore 15,164 tons. The total produce being 56,576 tons.

4*s.* per ton is the rate for iron ore. Exactly the same work has to be done by the railway company with respect to this as in the case of the sulphur ore. The ton in each case consists of 21 cwt. and the waggons are all the property of the railway company. I don't think the prices quoted free on board are correct in either case; but I don't think that should form an element in calculating what is a reasonable rate for the railway company to charge. Even with the present rates the Wicklow Copper Mining Company are able to divide very large profits. At the meeting of the shareholders of the Wicklow Copper Mine Company, held on 28th October ultimo. The Chairman Mr. Wright stated, that their raisings in 1855, were only 12,500 tons, and that for the present year 39,000 tons. The railway was not open in 1855, now it is. In 1862 the Wicklow Copper Mine Company did not pay any dividend, in 1864 they paid 24 per cent., and in the September half of 1865, 32 per cent.

1936. Then you include some other item?—I have included all the other varieties of ores which have a higher value, and therefore do not

The rate from Avoca to Arklow by tramway is 2*s.* per ton of 22½ cwt. On the 12th May

No. 4.—Dublin, Wicklow, and Wexford Railway—*continued.*

Extracts of Evidence sent to the Company.

come under the categories which I have mentioned. I have included the copper ore, and a portion of the deposit of copper; which make a total of 56,576 tons. That produce could, were it not for the charges paid, have been raised to a very great extent. The company had, I am informed, contracts for this year which would have enabled them to sell 80,000 tons altogether of ores from that single mine, but they could not fulfil them, owing to the difficulties with the railway company. The "smalls" are of course not sent at all. There is one other port to which ores are sent, which is only 6¼ miles distant, namely, the Port of Arklow, which is only available in the summer months in consequence of the bar.

1937. (*Earl of Donoughmore.*) In point of fact it is not a port at all. It is only an open roadstead?—It is an open roadstead. The charge to that place is 2*s.* 6*d.* per ton for the 6¼ miles, or about 4·8 pence per mile. On the 9th of May, in consequence of those charges, and the difficulties with the railway, the mining company had 120 carts carrying ore to Arklow, having thrown the railway company overboard altogether, finding it cheaper to deliver it in that way at Arklow, than to take it to Kingstown.

1938. (*Mr. M'Lean.*) Is there a tramway to Arklow?—The tramway was made originally by Mr. Hodgkin, but it has been sold to the railway company.

1939. (*Mr. Horsfall.*) Which railway company is it?—The Dublin, Wexford, and Wicklow Railway Company. I may add that that is not the only loss which the Vale of Avoca as a mining centre suffers, because we lose the advantage of return freights from the coal trade. The coal vessels coming into Dublin are obliged to return chiefly in ballast; of course they do not go to Arklow, and so the mining company loses the advantage of that return freight which the delivery in Dublin or Kingstown would give them; and now that we are to have a line of screw colliers, the advantages of return freights would be more certain.

1940. (*Chairman.*) Do you know whether the Wicklow Copper Mining Company have ever made a representation to the railway company upon the subject of their charges?—Yes.

1941. (*Mr. Glyn.*) Have they refused to make any reduction?—They have refused the offer made to them by the mining Company.

1942. (*Mr. M'Lean.*) Do not the mining company pay a very high dividend?—They do.

1951. (*Chairman.*) Are there any other mines that you wish to call the attention of the Commission to?—I should say that the limit of production in those mines will not be reached for very many years. I have been down in the mines myself, and I know what the extent of their production is; and I must say that if there were facilities of transit given at a cheap rate, say at half of the present rate, I am sure the quantity of ore which would be sent would be certainly three times what it is at present.

2058. (*Mr. Glyn.*) If the third-class fare were reduced would it not give an opportunity to the people to go to market and sell their produce themselves instead of selling it to hucksters on the road?—I think so; and that such a reduction, coupled with a reduction of parcels rates, would greatly assist the development of trade in Ireland. At present persons who send butter from the counties of Wexford and Wicklow to Dublin, are charged as much for three cools of butter (a cool is a sort of tub in which they send it) as for one; and the same rule applies to return empty cools. A large trade has sprung up between Cork and Dublin in butter, and those who send it are small farmers. It is a very peculiar trade, and being unsalted butter it will not keep very long. The day before I left a person who is a farmer, and who first established the trade, came to Dublin to see whether he could do anything with regard to the rates at which it was carried, and he found it impossible to get any reduction from the company.

2059. (*Chairman.*) Is the butter trade restricted in consequence of the high fares on the railway?—It has a great effect upon the price in Dublin.

5112. With respect to cattle?—Yes; and for poultry, provisions, butter, and eggs, and bacon, and all that kind of traffic. Then there is the Cork and Limerick direct railway, with which we have no through rates. I believe Mr. Pike is the chairman of that company, and he is a steam-packet owner at Cork. With the Cork, Blackrock, and Passage railway we have no through rates, nor have we any such arrangement with the Cork and Youghal Company. We have through passenger fares with the Dublin, Wicklow, and Wexford Railway Company, but we have to pay them 50 per cent. higher fares than they charge for their local traffic between Dublin and Kingstown out of the through fare.

5113. (*Capt. Galton.*) Speaking of passengers going from London to Dublin, do you mean that the fares you have to pay them between Kingstown and Dublin are higher than they actually charge the passengers travelling on that line?—Yes, in addition to which we pay rent for a station in Dublin, and keep our own clerks there.

Replies received.

1865, the mining company, finding that their cartage did not answer their purpose, entered into an arrangement with the railway company for three years at the rates above quoted. The work done in respect of ores sent by tramway to Arklow is as follows:—The railway bring it upwards of half an English mile by horse-power from the mining company's incline to Avoca Station. The waggons are then brought 5¼ miles by locomotive, when they are again brought by horses about 2 English miles to the quay of Arklow. The ore is loaded at the incline by the railway company. Of course the empty waggons have to be brought back for nothing when their load has been discharged.

It is simply absurd to talk of the present rates for carriage of minerals being reduced to one half. The work could not be done for the price. Not to speak of profits, the railway company never paid more than five per cent. on their original shares, while the mining company pay 30 per cent. The question of increase of production depends on the mining company themselves. If they were satisfied with a more moderate profit per ton, they could so much increase their business as to very much enlarge their gross profits, while at the same time the additional employment given would improve the condition of the country.

A large quantity of market butter is brought to Dublin from the counties of Wicklow and Wexford. The rates have never been complained of, and from the fact that the most of this butter is brought up by persons who purchase it through the country and travel back and forward by rail for the purpose, single firkins or cools are scarcely ever sent. The charge is from 6*d.* to 1*s.* for single cools, the former being for distances under 30 miles, and the latter over 30 miles; but when two or three cools are sent together they are charged at the tonnage rates, which will not amount to more than half the above.

The through traffic between Dublin and *Kingstown Pier*, in connexion with England, is totally different from the local traffic. It is a special service worked by special trains, which do not stop at intermediate stations on the Kingstown line. Special locomotives and carriages and extra staff are employed for this purpose. The trains run alongside the steamboats. A sum of about 6,000*l.* has not long since been expended in alterations of the station at Westland Row, Dublin, for the purpose of accommodating the English traffic. The proportion of fares charged to the London and North-western Railway covers all terminal expenses in Dublin, and these are very heavy from the large quantity of luggage which has to be attended to. The London and North-

No. 4.—Dublin, Wicklow, and Wexford Railway—*continued.*

Extracts of Evidence sent to the Company.

Replies received.

5116. (*Mr. M'Clean.*) You have not equal mileage rates with them?—No, they receive their full local rates on goods. We had no sooner made an arrangement with them, than some of the parties interested in the steam packets interfered. The secretary gave us notice of their intention to withdraw from them; we remonstrated, and eventually they agreed to continue them, and they are continued now. I am referring to the Wicklow and Wexford Company.

6804. As another instance of the want of liberality of a great company, the Dublin and Kingstown Railway Company have been compelled to reduce their fares owing to the opposition caused by the river steamers, and by the omnibus which leaves Dublin every hour and runs to Kingstown alongside the railway. The company were frequently solicited to extend their liberality, and did not do so until the opposition was firmly established. The frequent changing of the time-table on the Dublin and Wicklow line has been loudly complained of, inasmuch as people who have taken property along the line have done so on the good faith of every facility being afforded, and if a morning or evening train is taken off it must prove a serious inconvenience to many whose arrangements may have been formed.

6979. (*Capt. Galton.*) Do you know of any instances in which people travel by car, even where there are railways, because they can go at a cheaper rate?—I might give a very striking instance. Between Dublin and Kingstown, on one side of the railway, there are omnibuses running every day profitably, I believe, from Dublin to Kingstown in competition with the railway; by the omnibuses the fares are 4*d.* and 6*d.*; by the railway the fares are 6*d.* and 8*d.*; that is, for second and third class; inside the omnibus it is 6*d.*, and outside the omnibus the fare is 4*d.* from Dublin to Kingstown. Then on the other side of the railway here are two steamers plying backwards and forwards at the same rates as those charged by the omnibus, 4*d.* and 6*d.*

western Railway have an office at Westland Row for which they pay rent, but it is an error to say that they pay for a station there.

Through traffic with the London and North-western Railway is now paid for by equal mileage rates.

The fares on the Dublin and Kingstown Railway have not been reduced in consequence of opposition from steamers, which in fact is no opposition. Steamers run for three or four months in summer and *give* the railway quite as many passengers as they take from it. The omnibuses run a little inland of the railway, and accommodate persons who do not live near the railway stations. They are a failure, and do not pay their expenses, or very little more. The frequent changes in the time-bills (and they have been too frequent) were made at the request of residents in the district, and with a desire on the part of the directors, if possible, to please every one.

7020. It comes, I suppose, under a different classification?—They put it under a different classification. On some of the short lines near Dublin they have been gradually raising the rates; in fact we pay more now for parcels on the Dublin and Kingstown line; in some cases double.

7021. Is it not the practice on that line to carry all the parcels free?—Yes, small parcels, such as marketing parcels for your own personal use. If you are a yearly subscriber, they will carry your market basket free. Running by the side of this Dublin and Kingstown line, there is a four-horse coach every day, which carries passengers cheaper than the railway; it has been running for two or three years, carrying parcels and passengers.

7022. (*Chairman.*) Does it run frequently in the course of the day?—Yes. It runs right along by the railway. They will carry you outside for 4*d.*, and the railway company charges 6*d.* third class.

There has been no increase in parcel-rates on the Kingstown line. The following are the ordinary parcel-rates:—

Light Parcels.	Up to 7 lbs.	8 to 14 lbs.	15 to 28 lbs.	29 to 56 lbs.	57 to 84 lbs.	85 to 112 lbs.	Every further 14 lbs. or part of 14 lbs.	Dogs	Excess Luggage. First ¼ cwt.	Excess Luggage. Every further ¼ or part of ¼ cwt.	Heavy Parcels. Above 1 cwt., every fraction of ¼ cwt. being charged as ¼ in proportion, after the first cwt.
	s. d.	*s. d.*	*s. d.*	*s. d.*	*s. d.*	*s. d.*	*s. d.*	*s. d.*	*s. d.*	*s. d.*	*s. d.*
Not exceeding 12 miles	0 3	0 4	0 5	0 6	0 8	0 10	0 1	0 6	0 6	0 3	0 8 per cwt.
Above 12 and under 30 ditto	0 4	0 6	0 8	1 0	1 2	1 4	0 1	0 6	0 6	0 4	1 0 do.
30 and under 50 ditto	0 6	0 8	0 10	1 4	1 6	2 0	0 2	1 0	0 9	0 6	1 6 do.
50 and under 80 ditto	0 9	1 0	1 2	1 6	2 0	2 6	0 3	1 6	1 0	0 9	2 0 do.
Dublin and Wexford, including collection and delivery	1 0	1 4	1 8	2 0	2 6	3 6	0 4	2 0	1 6	1 0	2 6 do.

Season ticket holders' parcels are carried for 1*d.* each irrespective of distance, and, practically, without limit as to number.

7023. (*Mr. Horsfall.*) That coach probably picks up intermediate passengers?—It may get some, but it runs rather too close to the railway, I think, for them to be of much value or avail. I think it arises altogether from the difference of the fare charged; to the poor people a difference of 2*d.* is a great consideration; they prefer to save the 2*d.*

Mr. Horsfall is quite correct. The omnibuses are supported by intermediate passengers if they can be said to be supported at all. The omnibuses do not give return tickets, and from 6 to 7.30 a.m. and from 6.30 to 11.30 p.m. passengers by railway are carried 3rd class for 3*d.* each.

7024. (*Mr. Glyn.*) What has been the increase in the rates charged between Dublin and Kingstown?—I do not know, but they do not carry much goods.

7025. You said, I think, that they had raised the rates lately?—Yes, but they do not carry many goods, the line is too short.

7026. (*Mr. Ayrton.*) Would you propose that the railway company should be compelled to charge a lower fare than the proprietor of the coach in order to prevent the latter from carrying on his business, or that the Government should make the railway charge less than that charged by the proprietor of the coach, and thus enable the company to stop the man's business?—I think that the general good that would arise from a very serious reduction in the railway fares would completely outbalance any small evil that might be done in other respects. I look upon it as a most popular movement, and that it would be of immense benefit even with regard to the feeling of the people of Ireland towards this country, and towards the Government. I think they would feel that the Government were in fact looking after their interests, and were doing a thing that would substantially benefit them. We want them to enable the people to talk of other things than they do, to enable them to be industrious, and enable them to bring their little commodities from one town to another for sale. The article of fish is a very important

The question as to the amount of good to the country, which would result from very cheap or even free travelling on railways belongs more to political economy than railway management.

Large quantities of fish, chiefly herrings, are carried over the Dublin, Wicklow, and Wexford railway every season; hundreds of tons.

No. 4.—Dublin, Wicklow, and Wexford Railway—*continued.*

Extracts of Evidence sent to the Company.

one, and we want them to be able to carry their fish from the sea ports to all parts of the country inland.

7280. There is another matter with regard to the Wicklow Copper Mining Company, who have large mines near Avoca, from which they produce pyrites, sulphur ore, and iron ore; this has been developed lately, but it is of such poor quality that unless the carriage to England is very low, the traffic will not be developed in the district. I hold in my hand a letter from the secretary of the Copper Mining Company, addressed to Mr. Jackson, who is our secretary of the committee in the Chamber of Commerce:—"Herewith I send you the last half-years' "report of the Wicklow Copper Mining Company with a paragraph "marked, showing a decrease of 10,000 tons in iron ore in the half-"year's workings, in consequence of the unsatisfactory arrangements as "to carriage of their ores with the Dublin, Wicklow, and Wexford "Railway Company. The chairman or any of the board are quite pre-"pared and willing to give evidence to the Royal Commission explaining "this matter, and their carriage arrangements with the railway com-"pany, which appear to the directors very high and unsatisfactory." One of the directors of the same company wrote to me since I came to London, explaining the thing more fully; it is a very full account of the different rates charged. I will hand it in with the other letters (*handing in the same*). It shows that low fares induce people to go about. I do not know whether it is fair to compare districts, but I was about to refer to the district between Dublin and Bray and Kingstown, which is very much resorted to for pleasure. The railway company were charging so high that some persons set up an omnibus, and put on a steamer by which passengers are carried for 2*d.* or 3*d.* less than by the railway, and the result is that they all get enough to do, plainly showing that lowering the fares encourages the people to go about.

Replies received.

The remarks upon questions 1933, 1935, 1936, 1937, 1951, 6804, 6979, and 7023 apply to this.

No. 5.—Great Southern and Western Railway.

1651. Can you give any particular cases in which applications have been made by any of the companies in England to any of the companies in Ireland asking for through rates?—The London and North-western, the Manchester, Sheffield, and Lincolnshire, the Lancashire and Yorkshire, and the Great Northern Companies have been for the last seven years pressing upon the Irish companies, the Midland Great Western, and the Great Southern and Western, to come into such an arrangement, and they have only just succeeded, after great negotiations with them, in inducing the Irish companies to adopt a system of through rates, but they have still done it in a very imperfect manner, for the Irish companies insist upon having their local rates, and that of course has tended to retard the negotiations; but things are very much better now than they have been, and I think that they will improve, for they begin, I believe, to see the desirability of these through rates, the public begin to find the advantage of them, and I think the subject of through rates is very much considered now. Neither the railway companies in England nor in Ireland are responsible for the want of through cattle rates, for there is an anomalous state of the law as to the liability of railway companies as compared with steam packet companies in the transit of goods and cattle; there are no through rates as yet (except from Dublin in connexion with the Midland Great Western,) from the Midland Great Western or the Great Southern and Western system, for cattle, and that is mainly attributabls to the fact that the steam packet companies who carry the cattle and goods between the Irish ports and Liverpool are protected by their bill of lading; whereas if a railway company makes a rate it engages itself in the contract to carry the goods or the cattle to their destination; but if they are lost by the act of God or by the Queen's enemies, or if they founder at sea, the railway company is liable for it.

1651. Not correct, for since the year 1854 the Great Southern and Western Company has been in communication with the London and North-western Company to endeavour to establish through rates with England, and numerous meetings were held upon the subject. The Great Southern and Western Company hold a letter from the London and North-western Company to the effect that as there were so many competing interests on the English side they (the London and North-western Company) were unable to bring about a system of through rates and would leave the Irish companies to do what they thought best; and as through arrangements could not be made with the interior of England the Irish companies made through rates with Liverpool, *viâ* the ports of Dublin, Cork, and Waterford, and this arrangment continued in force for some years, when the London and North-western Company again reopened the question of through rates with the interior of England, and after protracted negotiations, owing to so many interests being involved, a contract was entered into by which a system of through rates was brought into operation on the 1st June 1864, and it was not until after that time that the other companies referred to ever raised the question of through rates; when raised they were given the same through arrangements as were made with the London and North-western Company.

1683. Do they issue to third-class passengers return tickets?—On some of the Northern lines they do, but not on the Great Southern and Western, or the Midland Railways.

1683. Correct.

2083. (*Mr. Horsfall.*) Are you aware of any complaints of unequal rates upon any line where there is not a sea competition?—Yes; on the line between Cork and Limerick; for instance, from Bruree to Limerick butter costs 9*d.* per firkin, and to Cork, which is about double the distance, only 5*d.* I have an instance upon the same line with regard to the carriage of turf and coal. One truck with 5 tons of coal costs 17*s.* 1*d.* from Cork to Bruree, and a single ton 6*s.* 3*d.*, and it costs nearly as much from Limerick. For turf brought from the Rathmore station on the Killarney line to Bruree, about the same distance as from Cork, they charge 1*l.* 7*s.* 6*d.* for a box, which would be about three tons weight of turf; and as three tons of turf is not more than the equivalent for heating purposes of 24 cwt. of coal, it is a perfect prohibition of that important source of industry.

2083. Quite incorrect, as the charge for butter, Bruree to Limerick, is 2⅔*d.* per firkin, and not 9*d.* per firkin as stated.

Turf from the Rathmore district will load five tons to the truck, which at 27*s.* 9*d.* per truck, is equal to 5*s.* 6*d.* per ton for 46½ miles. There is no loading *to* Rathmore, consequently the trucks travel in one direction empty.

2093. (*Mr. Glyn.*) What distance is that?—Twenty miles. In the neighbourhood of Dublin, which is of course the great centre of the cattle traffic, being close to the English market, nearly all the cattle are walked to market. The Honourable Mr. Massey, who grazes a large

2093. The only portion of this statement applicable to the Great Southern and Western Company is that referring to drovers' tickets, which were formerly given free; and the prac-

No. 5.—Great Southern and Western Railway—*continued.*

Extracts of Evidence sent to the Company.

Replies received.

number of cattle, says that he buys a great many cattle in Tipperary and distant fairs, and he finds that he can always drive them by road for half what it would cost him to send them by rail. At the last fair of Ballinasloe he found that it was better to send the cattle by boat to Dublin, although there is a railway station on the line to Dublin a quarter of a mile from the town. A person who is most largely connected with the cattle trade of Dublin has given me the following information, which I am also able to substantiate myself. That "in " October 1863 the Midland and Great Western Railway Company " raised their cattle rates at all the intermediate stations between Ballin- " asloe and Dublin. The following May the number of cattle and " sheep conveyed, as compared with May 1863, fell off considerably, " and in October 1864 the great proportion of the store cattle were " walked home. Within the last two years the cattle traffic of the " Grand Canal has risen from a mere nothing to from ten to twelve " boat loads of live stock weekly." That bears out what Mr. Massey stated with regard to the last Ballinasloe fair. One of the chief objections urged by owners of cattle against the management of the cattle traffic of the Great Southern and Western, which, upon the whole, being a very long line of railway, is well conducted, is, that the drover who has to go with a whole waggon is charged half a fare with the carriage of the cattle, and will have to pay third-class fare upon his return. In addition to that, they make a distinction at certain stations between half a waggon and a whole waggon. A whole waggon is supposed to hold eight beasts, and they allow three for half a waggon; but if the drover puts four into it they charge him the price of a whole waggon. I would like to mention here another instance of the effect of high fares connected with the herring fishery in the neighbourhood of Dublin, which has grown to be a most important trade. The poor persons engaged in the local trade walk from Dublin to Howth, a distance of nine miles, because the cost of a third-class ticket would be often as much as their profit for a day. The consequence is, that any traffic which would be derived from that source is lost.

2128. (*Chairman.*) Are there any other points which you wish to direct the attention of the Committee to in connexion with Irish railways?—I intended especially to have drawn attention to the undue proportion which the cost of carriage of the agricultural produce of our poorer lands bears to its value. Considering that Irish agriculture has now to compete with the entire world, and that we are transferring part of our population from the poor lands of Ireland to the richer ones of Illinois and other portions of America, that, in fact, in the case of a large number of poor farms, the rates of carriage to the markets amount to nearly the rent in some cases, any substantial reduction of fares on the lines, especially with differential rates such as I have alluded to, would be one of the greatest advantages which could possibly be bestowed upon Irish agriculture.

2129. (*Earl Donoughmore.*) Are you aware that it costs less money to transport a fat bullock from Normandy to London than it does from the pastures of Limerick to London?—Precisely. A friend of mine was actually disposed to go to Holland and buy store cattle and take them to Galway to fatten, and he expected a very considerable profit upon them.

2314. Will you state generally to the Commission on what points you have to make complaint; first as to the passenger traffic?—With respect to the passenger traffic, it is generally complained that the charges are too high, which prevents that intercourse with the western districts of Ireland that we would otherwise have if we had a lower rate upon the traffic from the metropolis and a lower rate of passenger charge.

2365. (*Mr. Horsfall.*) Are the fares, in your opinion, considerably too high between Limerick and Dublin?—Yes. I have heard it generally complained of, that the fares are high, and that if they were reduced it would increase the trade and business of the city of Limerick, as well as give greater facilities for travelling, and many more persons would travel.

2396. Before that you could have gone to Dublin and have returned the same day?—Yes; but you cannot do that conveniently since the four o'clock train has been taken off.

2397. Then what is the good of a return ticket?—I suppose no one would take one now. I have not done so myself.

2398. Practically a return ticket is of no great value?—None whatever.

2399. (*Chairman.*) Have the fares been the same as they are now for many years?—They have been so.

2400. Has there been no alteration made, either in raising them or lowering them?—I think they have been advanced; three years since I think the fare was 21*s.*, I am not certain, and it was advanced to 23*s.* 8*d.*

2411. Will you be good enough to state the nature of those complaints?—Some time since the different railways into Limerick, the Great Southern and Western and the Waterford and Limerick, carried goods through from Liverpool to Limerick at a through rate of 15*s.* per ton.

2412. (*Mr. Dalglish.*) What class of goods do you refer to?—Heavy goods, iron, tallow, palm oil, sugar, and such heavy goods, and within the last two or three years they advanced the rates to 27*s.* and 30*s.* a

tice was discontinued solely on account of the frauds practised upon the company by the subdivision of cattle into small lots for the purpose of multiplying the free passes, which the drovers afterwards sold.

2396 to 2400. This was not caused by any act of the Great Southern and Western Company, but by notice from the Waterford and Limerick Company, who refused to work to the first train from the Limerick Junction to Dublin, or from the last train from Dublin.

No change has been made in the fares during the last ten years.

2411–2413 and 2422. The low rates referred to were in force for a period when the railway companies and the steam packet companies between Dublin and Liverpool were working in opposition to the direct steamers between Limerick and Liverpool.

The Limerick people have still the opportunity of getting their goods conveyed by the

No. 5.—Great Southern and Western Railway—*continued.*

Extracts of Evidence sent to the Company.

ton, something equal to from 80 to 100 per cent., and we consider that that has done very considerable injury to the trade of our locality.

2413. (*Chairman.*) Are you able to state that the traffic of that description has fallen off since the raising of the charges?—It has.

2422. You stated, I think, that the railway companies charged 15*s.* a ton?—Yes, but now they charge 27*s.* When the railway companies were charging 15*s.* the Limerick Steamship Company charged but 12*s.* 6*d.* a ton.

2428. Referring to the articles which you have mentioned, do you suppose that that increased charge of 7*s.* a ton interferes with the consumption of goods in Limerick?—It interferes with the trade of Limerick, but whether it interferes much with the consumption of goods there I cannot say.

2429. Have you any reason to suppose that the consumption of those articles is diminished in Limerick by reason of the charge made for conveyance being increased to the extent you have stated?—I do not go the length of saying that.

2430. Sugar, for instance?—I cannot say.

2431. How then does it interfere with the trade?—It enables the merchants of Dublin and Waterford and of Cork to import goods at a freight I think of 10*s.* or 15*s.* into those places, and then they can send them within a very short distance of Limerick to some of the smaller towns, to the disadvantage of the Limerick import merchants.

2434. Do you propose that the rates should be adjusted with a view to placing a more distant port on the same footing as a port nearer to the place of production?—The increase in the charge by the railway company to 27*s.* has been attended with this disadvantage as regards Limerick, that it has compelled our local companies or it has induced them to advance their rates to 20*s.*, whilst goods of the same class are imported into Dublin, Cork, and Waterford at 10*s.* or 15*s.*

2435. If the increase of the rate does not interfere with the consumption of the articles, the reduction would simply have the effect of making you a present of so much per ton to enable you to carry on your business in competition with the merchants of Waterford and Dublin?—We should have equal rates with them.

2436. But it would in effect be asking the railway companies to give you a sort of bounty or present to enable you to compete with the merchants of Waterford and Dublin?—Not to make it a present; the fact is the goods now do not come by the railways; in fact the rate is a prohibitory rate, for since they advanced it to 27*s.* the goods have scarcely come by the railways at all.

3315. (*Chairman.*) It will be hardly necessary to read extracts from every Report of the Fisheries Commissioners, but you can read from some of the more important ones.—The extract which I am about to read is from the Report of 1855: "They also complain of being in a "great measure deprived of the advantage of the market of the metro- "polis by the increased rate for conveyance charged by the railway com- "pany from Cork to Dublin, which, added to the cost of transit from "Kinsale to the former place by cart, a distance of 20 miles, absorbs "the very small profit on fresh fish, in consequence of which the Dublin "market has been wholly deprived of any supply from that important "district."

3316. (*Mr. Glyn.*) Was there an increase in the rate for that year?—Yes. They speak of the increased rate in that year. The charge was 10*s.* a ton on that coarse fish. The charge on cod in 1853 was only 1*s.* per cwt., and in 1855 it was 30*s.* a ton. I find that in 1851 it was only 16*s.* a ton, so that the charge had been nearly doubled in 1855, as it was only 16*s.* in 1851.

3317. There appears to have been a great increase in the rate since the opening of the railways?—Yes, a great increase, and it has been also most fluctuating, for in almost every year the rates have varied.

3357. (*Chairman.*) Have you any suggestion to make as to the remedies which you think ought to be applied with respect to the deficiencies on the Irish railways, both as to the passenger and goods traffic?—As to the passenger traffic we labour, no doubt, under a great many difficulties in the way of getting from place to place in consequence of the trains not running in connexion with one another; for example, if you want to come from the west to the south you have a delay at Athlone probably of one or two hours; you also have a delay at Portarlington of one or two hours before you can catch the train on the Great Southern and Western Line. Then if you want to go to Belfast you must remain for four hours at Portadown before you can get a train to go on. And in the same way, if you want to come from Limerick to Dublin you are obliged to stop at the Limerick Station, which is a very bad station, for two hours or two hours and a half before you can get on to Dublin; and there is no accommodation whatever at the Limerick Junction, that is in consequence of the Waterford and Limerick Railway and the Great Southern and Western Railway not running in connexion with each other.

3706. (*Mr. Ayrton.*) Have you been able to ascertain the cost of driving cattle from the western part of the county of Limerick to Ballinasloe Fair as compared with the charge by railway?—An instance occurred the other day to myself. I bought 20 cattle at Killarney, and I wished to bring them to a station between Charlville and Limerick. I inquired the rate, and it would come to 4*s.* a head. I drove them on the road for 1*s.*, when I would rather have paid 2*s.* to have sent them by a train.

Replies received.

steamers plying direct between Limerick and Liverpool, and the rates are very low. The owners of the steamers are the traders of Limerick.

2428 to 2431, 2434. The statement put forth is sufficiently answered by the question subsequently put by the Commissioners in No. 2436.

The rates by direct steamer between Liverpool and Limerick are—

For bacon	-	15*s.* per ton.
„ sugar	-	16*s.* „
„ tallow	-	16*s.* „
„ palm oil	-	14*s.* „
„ guano	-	16*s.* „
„ sugar (refined)	-	18*s.* „
„ oil (liquid)	-	18*s.* „

3315 and 3316. Present rates for fish by passenger trains—Cork and Dublin—

Prime fish, such as turbot, john dory, soles, &c.	-	2*s.* per cwt.
Lobsters, crabs, and oysters	-	1*s.* 6*d.* „
Herrings, mackerel, &c.	-	1*s.* „

No change has been made in these rates since 1st May 1852, except for prime fish, which was reduced 1*s.* per cwt.

3557. Every possible care has been taken to make the branch trains correspond with those on the main lines as far as it can be done with the limited number of trains the companies can afford to run on the branch lines. The traffic on most of the branch lines is very limited.

3706. The cost of carriage in this case would have been 3*s.* per head, the distance being 60 miles.

No. 5.—Great Southern and Western Railway—*continued.*

Extracts of Evidence sent to the Company.

3717. Will you be so good as to state any facts within your knowledge upon that subject?— The charge on corn is 12*s.* a ton from Limerick to Dublin, and they take it by boat to Liverpool for 6*s.* The charge from Cork to Limerick is 7*s.* a ton for corn, and if it breaks the journey it costs 1*s.* 6*d.* more.

3728. The distance from Cork to Limerick is nearly 61 miles, is it not?—Yes.

3729. And the charge is 7*s.* a ton?—Yes. Then the drovers also complain that a whole truck holds 30 sheep, and that they are only allowed to have 12 as a half truck instead of 15, and further that they are only allowed three horned cattle in place of four, eight being the number for a whole truck; they also complain that if they take four horned cattle they are charged for a whole truck; they also say that they are not allowed to have a van for the drovers to travel in, and that the drover must travel in the cattle truck and he is often injured and bruised; they charge them half a fare in a cattle truck and a full fare back, and then if they want to come back again in the evening there is no third-class train for them, they have to wait till the next day, and they are charged a full third-class fare back again; they complain greatly of that. In England I believe the drovers are not charged. Then the number of tolls on common roads in Ireland makes walking there more expensive. In England sheep pens are placed over each other, but not in Ireland.

3743. (*Chairman.*) If it is so much cheaper to drive store cattle by the road than to send them by railway, how do you account for any store cattle in Ireland being sent by the railway?—There are some of the larger buyers who do not walk with their own cattle themselves, and they do not like to trust those cattle for four or five days at a time in the hands of drovers, and they would therefore rather pay three or four times as much to have them go by the train, but they are often stopped at the junctions for three or four hours, and that is a great objection. Coming here, a gentleman with his family got into the carriage with me at Maryboro', on the Great Southern of Ireland, he was going to Roscommon; at Portarlington, 10 miles on, he was detained 2 hours 20 minutes, again he must remain at Athlone 2 hours 35 minutes, in all 4 hours 55 minutes; whereas he was in motion only 2 hours 30 minutes from Maryboro' to Roscommon. Again the Limerick to Dublin passengers are, by a new arrangement, obliged to wait nearly two hours at the Limerick junction, or travel 1 hour 30 minutes round by the Great Southern *viâ* Charleville. A special cattle train I had, of 20 waggons, on two occasions, went from Limerick to Kildare, 100 miles, in six hours; showing, that with larger trade, companies are willing to increase the speed.

3747. And the charge would therefore be proportionately high for the short distances compared with long ones?—Perhaps so. Then with respect to parcels, I constantly get parcels of exactly the same size and the charges are not the same.

3748. Do you mean by different lines of railway?—No; I mean on the same line. Since I received a summons to attend the Commission, I have had three boxes, and those boxes came from Dublin, and one of them was charged 1*s.* 7*d.*, another was charged 2*s.* 1*d.*, and the other was charged 1*s.* 1*d.*, and yet they were exactly of the same size.

3749. (*Capt. Galton.*) Were they of the same weight?—I cannot say, but they held in them the same articles.

3750. (*Chairman.*) Have you made any inquiries as to the reason why these different charges have been made?—I inquired about it and they could not explain it.

3751. Do you imagine that the charges are pretty much in the discretion of the station master at each place?—I do not know, but he said that they had a scale of charges for parcels. I asked him if it was often changed, and he said it was. I then asked him to give me one of his scales, and he said that they only printed one for the use of the office.

3752. (*Capt. Galton.*) They do not publish lists of charges?—No.

3758. (*Chairman.*) If you desired it would they not send a small parcel by the slower train at a lower price?—No, unless I made it up to weigh 56 lbs., and some persons, by adding stones, do make up a parcel to weigh 56 lbs. With regard to horses, the charge to Dublin for three horses is 5*l.*, that is from Limerick, and the traders in them say that the charge ought to be 3*l.* These horses are put in stalls, and those that go in trucks are charged 16*s.* 6*d.* each; seven horses in a waggon from Limerick to Waterford cost 11*s.* each, not including drover.

3759. (*Mr. Hamilton.*) Have you ever made any comparison between those rates and the rates charged on English railways?—No, I have not. A passenger second class return ticket, from Charleville to Limerick, costs 4*s.* 9*d.*, two persons will drive this 20 miles, per road, for 10*s.*, and a horse will carry four or five persons on the Irish cars.

5011. Have you any statement to make with reference to the railway traffic of the south of Ireland?—The statement that I wish to make is this, that as far as Waterford is concerned, being the place I am connected with, there is a great difficulty in approaching the interior of Ireland from the want of railway communication, and there is even great difficulty in approaching Dublin, from the indisposition of the Great Southern and Western Railway Company to work in harmony with the

Replies received.

3717. The rate for corn—Limerick to Dublin—is 12*s.* per ton, including terminals, or a fraction over 1*d.* per ton per mile. The rate—Cork to Limerick—is 7*s.* per ton, including terminals, or a fraction under 1½*d.* per ton per mile for 62 miles, as against 1*d.* per ton per mile and a fraction over for 129 miles. There is no such thing as a break on the journey—Cork to Limerick—for goods or cattle.

3728, 3729. *See* answer to 2093.

3743. It must be the exception for such delays at junctions as are referred to, as cattle are mostly carried by special trains to markets, or from fairs, and such delays are thus avoided. For delays to passengers at junctions see reply to 3357.

The delay to passengers, Limerick to Dublin, was occasioned by a change in the running of the mail trains by the Postmaster-General, but this only lasted a few weeks pending negotiations between the Post Office and the Waterford and Limerick Company, and it has since been remedied.

3747 to 3752. The parcels referred to may have been the *same size* but certainly were not the *same weight*, if charged differently. All parcels are charged by weight and not by bulk. The Company's rates for carriage of parcels are given on every time-table printed for the Company, and issued to the public.

3758. The limit for parcels conveyed by goods trains is 28 lbs. weight and not 56 lbs., and then only when brought as distinct parcels, not when brought with other goods.

5011 and 5012. This statement is incorrect, as there is no indisposition, nor ever was, to give accommodation between Waterford and Dublin. There are three trains a day, Kilkenny to Dublin, quite ample for the traffic. The first leaves in time to bring passengers from our own line to allow of their arriving in

No. 5.—Great Southern and Western Railway—*continued.*

Extracts of Evidence sent to the Company.

Waterford and Kilkenny, so as to give trains that will conduce to the public convenience. I also wish to state that the public of the south of Ireland are, in my opinion, very much injured by the determination of the Great Southern and Western in connexion with the London and North-western to subsidize the local lines and steam packet companies to allow the traffic to be brought to England *viâ* Dublin. They pay 30 per cent. for that, and such diversion of traffic, in my opinion, not only is injurious to the southern cross channel communications, but very injurious to the public in the several localities.

5012. I understood you to say that there was an indisposition to give accommodation from the junction at Kilkenny up to Dublin; to what do you ascribe that indisposition to forward traffic?—They do not wish the traffic of the middle of the country should find its way to England by Waterford, they would rather it should go by Dublin, and they will not run trains so as to suit the convenience of the Waterford public either going up or down. For instance, if you want to go from Waterford to Dublin and back in one day, you cannot do so. They run their train from Kilkenny at so early an hour in the morning that it would be useless for the Waterford and Kilkenny Company to send trains to meet it, because no one would go. They run a train at 6.15 from Kilkenny to Dublin; the Waterford and Kilkenny Company would have to send a train at 4 o'clock, or a quarter past 4 o'clock, in order to catch that. In the same way the evening train coming down arrives at Kilkenny at such a late hour that no one would come by a train to Waterford if such was running.

5013. What remedy do you propose for that?—I think there should be some power which would compel railway companies to work harmoniously, so that the public interests might not be injured. Whether that power should be given to the Board of Trade, or some other party selected by Parliament, it will be for them to say; but there must be some power outside the railways. I know the Waterford and Kilkenny Company have always been disposed to run in such a way as will serve the Waterford public, but they have always been refused similar action by the other side.

5014. You say you have given more accommodation than you have received?—If the Great Southern and Western ran trains at convenient hours we should run trains in connexion with them. If they ran the trains at such hours as to suit the Waterford public, more passengers would go. In fact, they inconvenience the district altogether. Third-class passengers going from Waterford to Dublin lose a great deal of time either going up or coming down. They have to stop a night in Kilkenny, although the whole distance is but 112 miles.

5015. (*Capt. Galton.*) Do you say that passengers from Waterford to Dublin cannot go by way of Kilkenny and return the same day?—Not the third-class passengers, nor, in fact, any class passengers. Third-class passengers cannot go through the same day.

5016. Then they must take two days to get from Dublin?—To come to Dublin. If they go third class they must stop a night at Kilkenny.

5018. Your complaint is, that the Great Southern and Western do not give any proper facilities at the junction at Kilkenny?—Yes; they will not run trains at an hour that will suit the public; they run the morning train from Kilkenny at 6.15, arriving in Dublin at 9.30.

5019. (*Mr. Glyn.*) That is the through train of the Great Southern and Western?—It is the through train from Kilkenny; that is their Kilkenny line through train.

5020. It is their through train on the main line?—It is not a through train from Waterford.

5021. What train do you wish to join on the Great Southern and Western?—We want a train that will allow parties to leave Waterford at 6 o'clock in the morning and arrive at Dublin in proper time for business, and then enable the parties to leave at 4 or 5 o'clock p.m., so as to arrive in Waterford at 10 o'clock at night.

5022. Do you wish them to put on particular trains to accommodate you?—I wish to alter the hour of the trains which they do run.

5023. The trains, you say, that do run now are their trains to other parts of their system?—No; they are trains which no other part of their system is connected with; they run from Kilkenny to Dublin, and *vice versâ* without reference to any other train.

5024. (*Capt. Galton.*) Does the train which runs from Dublin to Kilkenny run as far as Kildare Junction with the train going to Cork?—No.

5025. (*Mr. Glyn.*) Then they start from Dublin a particular train for their service, which does not suit the public?—It does not, although we would make ours suit theirs if they started at an hour the public could travel at. If we ran trains now in connexion with theirs, parties would have to start from Waterford between 4 and 5 o'clock in the morning, and could not get back till 11 at night.

5026. (*Mr. Hamilton.*) Does that line belong to the same company as the line from Limerick to Waterford?—No.

5027. Is Mr. Malcolmson a director of your line?—He is; but it does not belong to the Limerick Company. The Waterford and Limerick

Replies received.

Dublin sufficiently early for the markets, &c., and to return same day. The second is the mail train, leaving Kilkenny at 2.30 p.m., to which the Waterford and Kilkenny Company work; and the third train leaves at 6.40 p.m., to which train the Waterford and Kilkenny Company also work, giving two through trains in the day. The passenger traffic between Waterford and Dublin is very limited, and some years ago arrangements were made which enabled Waterford people to return from Dublin the same day, but the number of passengers who availed themselves of it was very small indeed, certainly not sufficient to justify this company in continuing the arrangement to the prejudice of their local traffic.

The trains from Dublin to Kilkenny are, 7 a.m., 8.35 a.m., 12 noon, and 5.30 p.m. The two first work on from the junction at Kildare together, having 1st, 2d, and 3d class passengers, and the train reaches Waterford at 1.20 p.m. The passengers with the 12 noon train reach Waterford at 5.35 p.m. The Waterford and Kilkenny Company do not run from the 5.30 p.m. train, which reaches Kilkenny at 9.10 p.m.

The complaint of forcing the through traffic with England, *viâ* Dublin, is answered by the fact that one portion of the arrangement between the companies is, that the same through rates should exist between stations in England and Ireland, whether the traffic is sent *viâ* Waterford or *viâ* Dublin, and the public are left to make their selection of route, and it is to the manifest interest of each route not to allow the traffic to be diverted, inasmuch as each company is allowed 40 per cent. expenses before the division is made between the companies interested.

5014–5016. Third-class passengers can leave Dublin at 7 a.m., and arrive in Kilkenny at 11.35 a.m., and leave Kilkenny at 6.40 p.m., arriving in Dublin at 10.10 p.m. To both these trains the Waterford and Kilkenny Company work, but do not provide 3d class accommodation.

5018–20. See reply given to 5011 and 5012.

5027, 5031, 5032. The statement is quite untrue that the Great Southern and Western

No. 5.—Great Southern and Western Railway—*continued.*

Extracts of Evidence sent to the Company.

Company work the Waterford and Kilkenny, but it is only under working arrangements; they have no interest in it more than that. The Great Southern and Western have always set their faces against any sort of effort being made to the northern and midland districts of Ireland with Waterford. In 1846 a Bill was obtained to make a line from Kilkenny to Maryborough, and I understand that the Great Southern and Western people at that time bought up the shares in order that the line might fall through. With much difficulty, in 1860, a similar bill was brought in, which the Great Southern and Western opposed most violently, but it was obtained in spite of their opposition. A portion of that line is now made; it has served the traffic of the district to this extent, that for eight weeks, ending 19th May 1865, the traffic of the line from Kilkenny to Waterford has increased over and above the traffic of last year 33 per cent.

5028. The traffic between what points?—Between Kilkenny and Waterford.

5031. I understand you to say that the Great Southern and Western opposed the communication between Waterford and what you call the Midland district?—Yes.

5032. What object could they have in opposing that?—The object they had was this: there is not the slightest doubt that the whole of the towns in the midland districts of Ireland, such as Maryborough, Mountmellick, Phillipstown, Tullamore, Mullingar, and Parsonstown would be served if they were put into direct communication, *viâ* Waterford, with the South of England and South Wales. The agriculturists in those districts would find a ready market for their produce in the mining, iron, and coal districts, and, *vice versa*, they would require coal and iron and other articles from the English and Welsh districts. Direct communication is at the present moment stopped altogether. It is so managed that the traffic must come round by Dublin, which is both tedious and expensive, and the consequence is, that the localities are all anxious for a direct communication; but the Great Southern and Western has at all times opposed that in Parliament, and when a Bill at one time was obtained, they bought up the shares and allowed the Bill to drop through.

5033. (*Mr. Glyn.*) Is not Mr. Malcolmson a great steam-packet owner in Waterford?—He is.

5034. He did not say anything about this in his evidence?—I do not know what he has said in his evidence, but this I know, that the London and North-western Railway Company and the Great Southern and Western Railway Company have lately entered into an arrangement with him, by which the railway and steamboat interests are served to the prejudice of the locality. There has been an arrangement entered into, which was before the citizens of Waterford, and which was condemned by all parties, the effect of which is, that the traffic of the district will be brought to England by Dublin, *viâ* Liverpool and Holyhead, and that Mr. Malcolmson for the steamers and the Limerick Railway Company will get 30 per cent. of the traffic thus brought to Dublin to allow it to go by Dublin.

5035. (*Mr. Hamilton.*) When you say that "they" get, who do you mean gets the 30 per cent.?—The Limerick Railway to Waterford and the Waterford Steam Packet Company.

5036. Who makes the arrangement?—The North-western and the Great Southern and Western. I have the heads of arrangement which I can hand in if the Commission wish (*the witness handed in the same, vide Appendix* AL). In one of the heads, which struck me very much as most injurious to the southern routes, is this:—

"Waterford and Limerick Railway Company, Cork and Limerick "Direct Railway Company" (being another railway company that is subsidized) "undertake that all traffic consigned to them by other routes "than *viâ* Liverpool and Holyhead between places in England and the "places in Ireland, to which this agreement refers, shall not be booked "through, and shall be charged the local rates."

No through traffic from the districts to which the agreement applies can, under that arrangement at all, come by the Great Western or English Midland systems to England; it must all go by the London and North-western. In that way the traffic of the country is interfered with, and interfered with so as to inflict an immense loss on the localities, and when the North-western and the Great Southern and Western are paying 30 per cent. on all goods for the purpose of making them go in a particular way, they are sure to repay themselves by putting on increased rates.

5037. (*Mr. Glyn.*) In what shape is that 30 per cent. paid. Is it by a reduction of rates, or what?—It is 30 per cent. of the monies received for traffic which is allowed to go by Dublin.

5038. Is it in the shape of rates, or tolls, or what?—It is in the shape of money or direct payment; it is in the shape of a direct subsidy. Suppose 100 tons of goods are to be sent from Limerick or Tipperary to Birmingham for which 100*l.* is paid for the transmission, although the Waterford and Limerick Company will not carry 1 lb. of it, and although the Waterford Steam Ship Company will not carry 1 lb. of it, they will get 30*l.* out of it in order to allow it to go by Dublin, so that the company who actually carry it will only get 70*l.*

5039. (*Capt. Galton.*) The company who carry it giving to the other companies a bonus of 30 per cent.?—Yes, although they do nothing to earn it.

Replies received.

Company ever bought shares in the line from Kilkenny to Maryborough. When the original Bill was deposited in 1859 and 1860 the Great Southern and Western Company presented a petition against it to secure proper junction clauses, but they did not appear on their petition. In the Session 1860–61 they presented a petition in the Commons against the alteration to abandon the junction at Mountrath, and to make junctions at Ballybrophy and Maryborough. Counsel attended to watch the case, &c., but no evidence was given against the Bill. The company did not petition against the Bill when in the Lords.

5034. The witness by his replies either does not understand the nature of the agreement or he endeavours to mislead the Commission. No subsidy of any kind exists, but there is an arrangement at three stations where the Waterford and Limerick Company and the Great Southern and Western Company come into competition. By this agreement the rates by either route are the same, the public being allowed to select their own route, and the receipts of those stations for English traffic are thrown into a common purse and divided in certain proportions.

No. 5.—Great Southern and Western Railway—*continued.*

Extracts of Evidence sent to the Company.

5041. Then I understand your statement to be this, that the Great Southern and Western Railway Company, being interested in the traffic of Dublin, has made some arrangement with the North-western Company to secure all the traffic of that part of Ireland going by way of Holyhead?—Yes.

5042. And in order to secure this they have made some arrangement with the Limerick and Waterford Company and with Mr. Malcolmson's steamers, so as to provide that no part of that traffic shall be diverted by way of Waterford into South Wales?—They have made this arrangement, that upon all goods brought through Dublin to the North-western system in England at Liverpool or Holyhead, and consigned to Birmingham, and places north of Birmingham, that 30 per cent. off the receipts will be paid to the Waterford companies to allow it to go that way.

5043. That has the effect of diverting the traffic from Waterford to Dublin into South Wales?—It has the effect of diverting the traffic of the district to England from Waterford to Dublin, and thence *viâ* Liverpool and Holyhead, and in fact injuring the communication between the southern parts of Ireland and England.

5044. How does it affect the southern parts of Ireland?—Because the traffic that originally belonged to Waterford, and would come to Waterford, is diverted the other way.

5045. It goes north by Dublin?—Yes. In Dublin they have communications two and three times a day with Liverpool and Holyhead, but between Waterford and Liverpool the steam ships only sail twice a week, therefore people who have produce to send will naturally, when they pay equal rates, send all their goods by Dublin, and none will come by way of Waterford. Therefore the diversion of traffic will injure communications between Waterford and England, as the number of steamers will be lessened when they must depend upon the local traffic alone.

5046. This arises from a sort of understanding between the London and North-western Railway Company, the Great Southern and Western of Ireland, the Limerick and Waterford, and Mr. Malcolmson, the owner of the Steam Company?—And also the Cork Steam Shipping Company.

5047. What remedy do you propose for that?—As I said before, there should be some tribunal, such as the Board of Trade, to prevent railways using what I may call a very illegitimate mode of dealing with a public matter, and to forbid them doing such things as would prevent the traffic from flowing in the channel through which it would naturally flow, and not to allow any large company to subsidize a small one to the prejudice of the public interests.

5051. There is nothing illegal in this arrangement?—No, I am not aware that there is anything illegal; but although it may not be illegal, it is highly detrimental.

5052. (*Capt. Galton.*) You think, although not illegal, it is exceedingly injurious to the public interests that such an arrangement should be made?—Yes, and the public have decided so. Here is a resolution which was adopted with reference to it: "That this Committee, with all "respect for the opinions of the directors, considers these arrangements "to be well calculated to divert the traffic of the districts to England "*viâ* Dublin, and vitally injure the trade and commerce of Waterford "and the southern communications." That resolution was adopted at a meeting of a Committee appointed by the merchant traders and citizens of Waterford, the mayor of Waterford being in the chair.

5055. Has there been any extensive system of through booking between the North-western Company and the Irish railway companies?—We have had for a considerable time through fares for passengers between the principal stations on the North-western lines and the principal stations on the Great Southern and Western line; we did try for many years to get through booking for goods also, but we could not succeed in getting that until about two years ago, and then only to a limited extent.

5056. At the present time is there a general system of through booking for goods?—Only to a limited extent.

5057. Have difficulties been experienced by the London and North-western Company in bringing a system of through booking into operation?—Yes; I may say that we have had very considerable difficulty even with the Great Southern and Western Company, which is a line especially connected with the London and North-western system *viâ* Holyhead and Dublin; for instance, we have now got a system of through booking for goods between stations north of Birmingham, and including Birmingham, and the Great Southern and Western system down to the Limerick Junction. From Limerick Junction to Cork we have also through rates for goods to the same district; but there are 15 per cent. higher charges than by the steamers from the same district, the railway route being much shorter and in every way a much better route to the North-western system than the sea route is to Liverpool, and thence by railway. But the steam-packet interest was so great that the Great Southern and Western company could only consent or rather could only succeed in making arrangements with us, by charging a differential rate of 15 per cent. in favour of the sea route from Cork, which commands a very large traffic. The differential rate against the railway route from the city of Cork is 20 per cent.; but the booking to the North-western system from a great

Replies received.

5055, 5056. The Great Southern and Western Company have through arrangements for goods traffic to and from all their chief stations to all similar stations on the London and North-western, the Lancashire and Yorkshire, the Great Northern, and Manchester, Sheffield, and Lincolnshire Railways, and they have lately agreed to make through rates with the Bridgewater Canal Company.

5057. *See* reply to 1651.

It is not from any fault of the Great Southern and Western Company that some places on the Waterford and Limerick line are not in connexion with stations on the London and North-western Line south of Birmingham. The Waterford and Limerick Company are the objecting parties. Such arrangements were in force at one time, but were put an end to by that company.

No. 5.—Great Southern and Western Railway—*continued.*

Extracts of Evidence sent to the Company.

portion of the best traffic district of the south-west of Ireland was limited to stations north of Birmingham, they would not make the through rates south of that place at all.

5058. Are the Great Southern and Western Railway Company of Ireland connected with any large shipping companies?—I believe that some of their directors are; and there are a number of lines in the district—cross lines— down to Waterford, and other ports, that appear to have some control over the Great Southern and Western board, either by competition, or by some other means, so that we could only get an arrangement made, such as I have stated, by making a joint purse, in which the steam packets were interested as well as the railway companies; and in fact, we were compelled, in order to get an arrangement made, to sacrifice a portion of our railway distance, which we had to make over to the steam packets. Our mileage, in fact, does not really commence until we reach Holywell on the Holyhead railway; the distance between Holyhead and Holywell being given to the sea route.

5059. (*Mr. Glyn.*) How many miles is that?—About 70 miles; it is the difference in the distance between Dublin and Liverpool, and Dublin and Holyhead.

5060. Practically, is there very little through booking from Cork *viâ* Dublin on to your system?—There is scarcely any, in consequence of the differential rate of 20 per cent., which throws the traffic on to the water; and it was intended, as I believe, to do so.

5071. Do those steam-packet companies do more than fairly compete with the railway companies?—In the instances that I have already given, there is a differential rate, that is owing to the Great Southern and Western Company being so mixed up with the steam-packet interest that they enforce this differential rate, which therefore entirely prevents the development of the traffic upon the railways.

5076. The division of the money which is received into a common purse is not per mile, but it is a division made by the companies in which the larger portion is claimed by the Irish company?—Yes, and that very much cramps the through arrangements; the tax upon the English company is too great.

5076. (*Mr. Horsfall.*) Does your answer apply equally to goods as to passengers, or are your rates not higher on cattle in England than in Ireland?—I think not; I think in most cases they are lower. In cases of through rates of that kind we always endeavour to meet them by making such rates as will develop the traffic of the Irish railways, while, on the other hand, they adhere to their local rates in all cases, which of course prevents the traffic being brought.

5078. (*Chairman.*) Is it your opinion that some of the Irish railways are managed with a view to the profit of the steam-packet companies rather than the profit of the railway companies?—Yes, I think so; there is also another difficulty which we have experienced, and that is, as to the question of the sea risk. Several of the Irish companies object to make through rates in consequence of the risk which they think is incurred by the railway companies in booking through. I believe, as the law stands now, a steam-packet company is only liable for a comparatively small sum in case a vessel should be lost; whereas, if a railway company books a passenger through, they might be held liable, as a railway company under Lord Campbell's Act; and therefore some of the Irish railway companies refuse to incur that risk, and to join in through rates. That I believe is a very serious obstacle to the development of the through traffic between England and Ireland.

5082. (*Chairman.*) What reason is given by the Irish railway companies for limiting the through booking to the district north of Birmingham?—I really cannot tell; we get no direct reason for it, except that they object.

5083. If it be advantageous to them to book through to places north of Birmingham, why should it not be equally advantageous to book through to places south of Birmingham?—In the instance that I have referred to, it was the steam-packet interest that prevented it. To some extent we have through rates with the Great Southern and Western Company to London for goods, but it is not to a large extent, because on other parts of the line through rates to London, or south of Birmingham were entirely refused. We had been trying for so long a time to get a through arrangement made, that we were at last quite glad to accept the thing upon any terms, being in hopes that as things went on, the Irish railway companies would at last extend it.

5086. You stated, I think, that you thought the fact of there being a steam-packet interest on the Irish Railway Boards prevented the development of traffic on the railways, but why should that interest be adverse to the development of that traffic?—If a board is composed of persons who are partly interested in steam packets, they will endeavour to get the rates fixed, so as to take the traffic down to the port in which they are interested, and not to come through by railway to Dublin.

5087. They prefer giving differential rates, which shall carry the traffic towards the port in which they are interested, instead of encouraging traffic generally over the line?—If you take those lines of railway from Limerick and Tipperary to the coast, the rates down to Waterford would be so arranged as to take the traffic down to that port, and to be shipped and taken from thence by steamers, instead of being taken to Dublin, and sent on from thence.

Replies received.

5058–5060. Not one of the directors of the Great Southern and Western Company is in any way connected with the steam packet interest between Ireland and England, nor have the steam packet companies the slightest control over the Great Southern and Western Railway.

5076. The division under the *common purse* arrangement is confined to *three stations* in Ireland, viz., Limerick, Limerick Junction, and Tipperary, and from all other stations on the Great Southern and Western line the division is by *mileage*.

5077. Not applicable to the Great Southern and Western Company, who have no through rates for cattle; and for goods traffic *see* reply to 5076.

5078. The first portion of this answer is quite incorrect. The latter part, referring to the state of the law in regard to sea risk when the company entered into arrangements for through booking for cross channel traffic, is correct; nevertheless it has not prevented the directors from making through rates.

5082, 5083. This is a mistake, as the Great Southern and Western Company has through rates to and from all their chief stations, except Limerick Junction, with similar stations south of Birmingham.

5086, 5087. Answered already.

No. 5.—Great Southern and Western Railway—*continued.*

Extracts of Evidence sent to the Company.	*Replies received.*
5268. Have you attempted to make arrangements with any other large Irish companies, such as the Great Southern and Western and the Great Midland of Ireland?—We have. I have frequently requested them to make through booking arrangements, but we have hitherto failed. They have given us the general reply, that their arrangements were already made by agreements with other companies, and when those agreements expired they would consider the question of making arrangements with the Midland.	5268 to 5270 and 5916. No such application ever made by the Midland Company to the Great Southern and Western Company.
5269. Have those arrangements of the Ulster Company been of long standing?—We have no agreement whatever; it is merely a temporary arrangement from day to day. I believe the Ulster Company has an agreement, which I have never seen, by which a considerable portion of the traffic is diverted by the Dublin route; we have never pressed it upon them, waiting till they themselves were in a position to arrange with us.	
5270. Do you think it is possible that if more complete arrangements could be carried out between the English companies and the Irish companies any large amount of, or any traffic at all could be developed which does not at present exist?—I have no doubt of it; I think the Irish railways ought to be thrown open to every English company who can book through, if it is a reasonable route. I may state that from Belfast to some of the very largest and most important manufacturing districts of England the Midland route is the nearest and best. We have met with great difficulty, and we have persevered with the communication between Morecombe and Belfast for many years at a very great loss; but we have now turned the corner, and the boats are paying better than they did.	
5916. (*Mr. Hamilton.*) Do the directors of the Great Southern and Western Company refuse to give you through booking arrangements?—I have not personally asked for through booking arrangements until a few weeks ago, and then they refused them; but I have understood from other parties in the south of Ireland that they have been always anxious to obtain through booking; however, I cannot speak of that from my own knowledge.	
6435. On the Great Southern and Western Railway, for instance?—I have no doubt of it.	6435 to 6448. Not more than 2 to 2½ tons of flax can be put in a truck, and the rate for it from Cork to Belfast is 30*s.* per ton, including terminals and cartage in Dublin.
6436. (*Mr. Hamilton.*) What freight did you pay from the south of Ireland to Belfast?—I think I paid at that time 30*s.* a ton from Cork, the through freight to Belfast.	
6437. What would be the direct distance by railway?—164 miles to Dublin and about 100 to Belfast.	
6438. (*Capt. Galton.*) Is there a large quantity of flax sent from that part of Ireland to Belfast?—Ten years ago there was rather a large supply, and there will be again, I expect. We are erecting a large spinning mill in Cork, and if we do not send the flax it will be sent as yarn or as linens.	
6439. Do you think that that would be a remunerative traffic for the railway company?—Yes.	
6440. Would it be sent in sufficiently large quantities to make it remunerative?—It will be, I think, in time; it has not been hitherto.	
6441. When you say that large quantities were sent some time ago, have you any idea of the actual quantities? Can you give in tons the quantity sent per annum?—No, I cannot; but I sent myself the produce of about 500 or 600 acres.	
6442. To what would that amount in tons?—I suppose over 100 tons. It was the scutched flax. I cannot say exactly. I was merely one. There were several other mills working at the same time.	
6443. Do you think that flax will continue to be grown to a large extent in the south of Ireland?—I hope so.	
6444. It is a remunerative trade?—Yes, a great number of persons grew it last year. Some were disappointed who did not understand it, but a great number were satisfied.	
6445. Does the rain affect it?—Yes, it does. It cannot get too much rain in the growing time from May to June; and in that way we have great advantages, for we have plenty of rain.	
6446. (*Lord Donoughmore.*) In what part of the county of Cork is the flax grown?—Generally in the west part of the county of Cork.	
6447. (*Mr. Hamilton.*) If you could send the flax to Belfast by railway at the same rate as round by sea, would it not be a great convenience to you?—Yes, decidedly.	
6448. It is only the excessive charge that prevents you?—Yes; when I was doing it, there was great inconvenience in corresponding with parties in Dublin and Belfast.	
6741. (*Capt. Galton.*) Might not one railway company borrow rolling stock from another?—I am sorry to say that they do not do so; there is not that feeling existing between them that there ought to be and they do not borrow from each other. The Great Southern and Western line is connected at Athlone with the Midland, and they could if they pleased supply to Ballinasloe a superabundance of trucks, and if they did that, and carried the cattle a shade cheaper, all the cattle bought and sold at Ballinasloe would be brought to and taken from Ballinasloe by railway.	6741. The Great Southern and Western Company *do* lend rolling stock to every company with whom they are connected, and they to us, on application; and there is no exchange of goods or cattle at Athlone. All go forward in the trucks in which originally loaded.
6802. (*Chairman.*) You are a wholesale merchant of Dublin?—I am.	
6803. Has your attention been directed to the system pursued upon the Irish railways, with respect to rates and charges?—It has for a considerable time.	

No. 5.—Great Southern and Western Railway—*continued.*

Extracts of Evidence sent to the Company.

6804. Have you formed any opinion with regard to the possible improvement of that system?—The opinion I have formed for a considerable time has been, that the proper development of the commerce of the country can only be effected by cheap rates, both for passengers and goods traffic. Railways, as the great highways of the country, are necessarily the great monopolists of passenger and goods traffic; and as such should in every possible way give every facility for cheap, safe, and expeditious travelling, whereby the trade of the country would be extended, and the resources developed. In this country the very opposite is the policy pursued, and the interests of the poor are not considered; and the rich, although heavily taxed, and even willing to pay, are seriously inconvenienced when travelling from any distant part. The very germ of success to commerce is facility, and if facilities are not afforded, it then amounts to an obstacle which is exceedingly disheartening when the very opposite should be afforded. In illustration, one of the articles of commerce we largely deal in and manufacture is white paint. This article is most extensively used; but our trade is seriously curtailed by the high rate of carriage by the Great Southern and Western line charging 20*s.* per ton to Cork, whereas the same article can be brought by steamer from Liverpool and Bristol at the rate of 10*s.* per ton. It is perfectly plain that we must either forfeit 10*s.* per ton in our price or get the trader to pay us 10*s.* per ton more, which is not at all likely he will do.

I have prepared a short tabular statement showing the charges on articles in large daily consumption, and which in my opinion are excessive.

This tabular statement is merely intended to show that the charges for conveying many articles of commerce is excessive, and in most cases considerably in excess of freights from any English port, in some cases double, thereby precluding the possibility of trading, owing to the high rates.

6819. Are you prepared to make any statements upon the subject?—I am intimately acquainted with the corn and flour trade of Ireland. As the means of transport is essential to the carrying on of this branch of trade profitably, I have given the railway system of Ireland, its rates, charges, and facilities of transit, my especial consideration. I have found each and every company I came in contact with disposed to exact the extreme rate of remuneration for the services they perform, and it was only by having the means of transit by the Grand Canal kept open that they were prevented from advancing their rates of freight still further, and thus materially interfering with the trade and commerce of the interior. That was with reference to a Bill that was promoted by the two principal companies, the Midland Great Western and the Great Southern and Western, in the year 1860, for the purchase of the Grand Canal, with the view of buying it up as a competitive means of communication. They ultimately failed, and the canal reverted to its original owners, and is now worked by them with great advantage to the districts that it serves. The result of a combination between the Great Southern and Western and Midland Great Western entered into some years since, by which the rates and fares are fixed and healthy competition is precluded, is, in my opinion, prejudicial to the development of the natural traffic and trade of the country, and calculated to retard materially commercial enterprise. The further extension of the railway system into districts unaccommodated already is postponed inevitably; and it is a part of the agreement entered into that no encouragement, even so far as the haulage of traffic by either of these two companies, be given to branch lines in a certain territory understood to be the property or right of the other company. That agreement was confirmed by an award.

6820. (*Mr. Glyn.*) How did the award arise:—There were two arbitrators chosen and an umpire. There had been a great deal of competition going on between them for some years.

6821. Then the conditions of that agreement were settled by an arbitration?—Yes; they both work the traffic under that agreement, and are bound to observe the conditions of it. The rates being fixed is obviously detrimental to the interests of the districts. That award is signed by "Edward Watkin" and "Mark Huish."

6822. (*Chairman.*) Will you call attention to the material points of that award?—It recites the circumstances of the case under which the arbitrators were chosen, the differences which had arisen, and that they had been chosen to settle the matters at issue.

6823. (*Mr. Glyn.*) What were the matters at issue?—Competition of rates at points at which they touched. What set it going more particularly was this, the Grand Canal had been leased by the Midland Great Western, one of the lines, for a series of years, whereby the Great Southern and Western felt themselves aggrieved. A considerable degree of competition was carried on by means of the Grand Canal, which was the bone of contention between them, therefore it was a matter of serious consideration by the arbitrators. This is their award upon the subject:

"And we further award and adjudge that in anticipation of and until
"the authority of Parliament shall be obtained for such purchase, and
"with a view to the objects thereof, and in order that the benefits to
"the public and the said companies expected to be derived therefrom
"may at once be obtained, so far as an harmonious system of working
"and arrangement of the undertaking of the said canal and railways
"can effect the same, an interim agreement for the joint working and

Replies received.

6804. Some of the rates shown are incorrectly quoted. Limerick rates are all wrong, being much in excess.

6819 to 6828. The award referred to had for its object the termination of hostilities then raging between the two companies, and which had its origin in the Midland Company obtaining possession of the Grand Canal, a navigation running through a large portion of the line of the Great Southern and Western Company.

No. 5.—Great Southern and Western Railway—*continued.*

Extracts of Evidence sent to the Company. *Replies received.*

" management of the said canal by the said two railway companies shall " be entered into between them and the said Grand Canal Company; " and that the said canal shall, as far as practicable, be conducted and " managed as part of the undertaking of the said two railway companies " by the joint committee herein-after mentioned, as and from the 2d " day of July 1860."

6824. Did you not say that the Grand Canal is quite independent now?—That was the result of the opposition on the part of the public. So far as regards the canal the Bill was before Parliament, and it was passed with such a rate of toll as the railway companies did not deem it their interest to accept, therefore they objected to the Bill. So far as the canal is concerned it comes out of the arrangement altogether, and the remainder of it only stands good. Perhaps it will be as well not to refer to that part of it any further. Then they go on: " And we further award " and adjudge that after an Act of Parliament shall have been obtained " containing the necessary powers to the said two railway companies " respectively, they shall enter into such agreement or agreements as " may be necessary to carry out and render legally binding the provi- " sions of this award, or any of them; and the form of such agreement " or agreements shall, in case of difference, be settled by arbitration, " under the provisions of the said Act; and that such agreement shall " be made to take effect in perpetuity, if so authorized by the said " recited Act; and in order to settle and define the district of country " within which the system of railways and canals belonging or attached " to or worked for the benefit of the said companies respectively shall be " considered as between themselves, and having regard to the permanent " advantage of the public, and the objects of the said submission and " this award to belong, we have laid down upon a map or plan of Ireland " attached to this our award, and signed by us and our umpire, the " said George Leeman, such a division line of the country traversed by " or to which the said railways respectively and the canal or water " communication contiguous thereto, either directly or remotely, afforded " accommodation, as, in our judgment, to represent the district served, " or which ought to be hereafter served, by means of each of the said " two railway companies, or parties in connexion with them, or pro- " moting branches to or from their respective lines, or to or from the " said canal. And we further award and adjudge that neither company " shall make, promote, assist, or encourage any lines of railway to any " point beyond the boundary line now awarded or intended to join a " portion of a line in contravention of such boundary; nor in the event " of any lines being made by other parties shall either of the railway " companies, directly or indirectly, enter into any alliance or arrange- " ment with such parties to or from any point which can fairly be " considered and declared by an arbitrator, if disputed, as within the " scope and intention of this award." It was to that particular point that I wish to direct attention, in order to show that they have parcelled out the country, as I may say, between them, and allowed of no interference on the part of any branch lines, or any traffic coming from them. Of course they had the country completely under their control, each in their own territory.

6825. (*Chairman.*) Without going through the whole of that award is not the result this, that in consequence of an agreement between the two parties they agreed not to compete with each other, but to divide the traffic in certain proportions?—Yes.

6825. (*Mr. Horsfall.*) Was the object of the two railway companies to do away with the opposition of the canal?—Yes, that was the principal object.

6827. In which they failed?—Yes, they had the object of dividing the rates at the two places at which they came into competition, namely Clara and Athlone. At those two places they put the receipts into one common purse and divided them.

6828. But still they have the competition of the canal against the two railways?—They have. The principal point that I wish to draw attention to is that according to that agreement no branch lines were to be promoted in a district which each considered as their own. The rates for freight are unequal, and in my opinion considerably higher than the trade can afford; and I am satisfied that a moderate reduction would speedily induce an increased traffic over the lines of the greater part of Ireland. I am of opinion that any arrangement which could be effected whereby the railways of Ireland could be worked as one general comprehensive system, and the rates and fares lowered to a point analogous to those of Belgium and the continent, would more speedily develop the resources of the country, and induce the investment of capital in trade and manufactures than any other measure that has yet been put forward, and that it would speedily result in increasing the receipts derived from the Irish system of railways, making 20,000,000*l.* of capital at present invested yield a fair and reasonable return instead of the miserable dividend at present paid upon the average of Irish railways. I am strongly of opinion that, in order to make railways fully remunerative, you must fix the rates they receive in proportion exactly to what the circumstances of the country are in which they are situate. This has never been done in Ireland yet on any extended scale, and yet the railway authorities complain that there is no traffic, and their receipts gradually dwindle down and the rates are kept up to fully, if not beyond, the English maximum. The existing traffic is thus literally passed by and not fostered, while trains run comparatively empty, and as a con-

No. 5.—Great Southern and Western Railway—*continued.*

Extracts of Evidence sent to the Company.

sequence shareholders receive no dividend. Railway companies must be satisfied to take for their remuneration the amount that is forthcoming, and not demand what cannot be complied with.

6830. (*Chairman.*) Are you able to state that your own trade in grain could be materially increased if the charges were lowered?—Decidedly.

6831. (*Mr. Glyn.*) It would move more up and down the country with a reduction of charge?—Yes; we should cover a greater district of country; for instance, the rates in our particular case have been advanced since the canal competition has actively ceased. I should have mentioned that one result of the canal reverting to its original proprietors has been that they have now made an arrangement by which they compete at certain rates without conflicting, and the rates of the railways have been raised nearly 25 per cent. in many particular instances since that occured.

6832. (*Chairman.*) The rates upon the canal have been raised?—Yes, both the canal and the railways have advanced their rates nearly 25 per cent. Three or four years after the canal had reverted to the canal proprietors, they worked in fair competition only.

6833. (*Mr. Horsfall.*) Then the directors of the railways and the canal have arrived at a right understanding?—Yes.

6834. (*Mr. Glyn.*) Do you think that the high rate upon grain prevents speculation in that article, that is to say, where a party buys grain at one port at a low price he cannot forward it to another port where the price is higher, on account of the high rate of carriage?—I do not think it has that effect; it does not stop speculation.

6835. It does not stop bargaining in fact?—No, but it prevents an equalization of price to the fullest extent which there might be. It is high in some districts and low in others.

6836. (*Mr. Horsfall.*) What per-centage of reduction of the rates upon grain would you consider necessary to confer any appreciable benefit upon the trade?—I think from one half to one third would be a very fair reduction.

6837. Do you think that that would pay the railways equally well through the increased traffic that there would be?—Not for some time, certainly not; for perhaps two years, or a sufficient time to allow of the development of the traffic that would be created by the lower rates. There must be sufficient time to put the new system upon its trial, not immediately, certainly.

6838. Do you think it would after a lapse of two or three years?—I should say so.

6839. (*Mr. Glyn.*) You say a reduction of one third; what would be the actual figures?—The present rate of grain is about 1½*d.* per ton per mile. That is the lowest rate on any quantity.

6840. You wish it to be fixed at that?—I think 1*d.* per ton per mile would be a very fair rate.

6841. (*Mr. Ayrton.*) Where is the increase of traffic to come from; from what source?—I do not know that in grain there would be so much increase created by the lower rates, but in other articles there certainly would, such as manures and many other goods, and in grain to a certain extent, but not to the same extent as other articles.

6842. The diminution of the charge would be at the rate of ½*d.* per ton per mile, you say; that would be, on the average of 50 miles, 2*s.* 1*d.* on the ton?—Yes.

6843. That would be about 6*d.* on the quarter?—5*d.*

6844. Do you think that the economy of 5*d.* on the quarter would lead to any increased growth of grain in Ireland?—I am certain that it would; to what extent I cannot say, but I am certain that it would lead to some. I know many mills which are at this moment idle by reason of the rates of freight rendering them not able to be worked profitably.

6845. You think that the difference of 5*d.* per quarter would set them into activity?—5*d.* a quarter would be a very great consideration to men of business.

6846. Do you think that an additional charge of 5*d.* per quarter is the cause of their inactivity?—In some instances decidedly so.

6847. Can you mention one?—There is a mill at Athlone, and another at Clara, to which that remark applies.

6848. Take the Athlone mill; in what way does the additional charge of 5*d.* per quarter prevent that mill from working?—A miller situate at Athlone must buy his grain either at Galway or Dublin. Home-grown wheat is almost out of cultivation, at least in the district about Athlone, and in all districts with the exception of Cork, Kilkenny, Carlow, and the south. As regards Athlone, home-grown wheat is hardly known. Therefore a miller must buy his wheat in either of those ports, and bring it down to Athlone, and grind it there, and supply the markets in the immediate vicinity. Therefore it must be patent that any saving whatever is of material assistance to him.

6849. If he must bring his grain, how does the 5*d.* per quarter prevent his bringing it, if there is grain in the country to compete with him?—But the country is supplied with mills which are on the seaboard; for instance, Galway and Dublin supply the market, and they have an advantage in supplying the markets because they are able to send more directly. They only send the exact quantity of flour that is required. Whereas the miller at Athlone might bring the whole of the wheat down, and perhaps be able to sell one portion to an advantage, and another portion not to an advantage; and therefore there is that against him.

6850. Do you not think that the injury to the Athlone miller results

Replies received.

6830–6855. The sole cause of the decline in the milling trade, in the interior of Ireland, was the repeal of the Corn Laws. Ireland formerly supplied the manufacturing districts of England with flour from Irish wheat. This trade has nearly ceased, and owing to the erection of steam mills in the seaport towns, which manufacture wheat, the mills in the interior of Ireland are now principally employed in supplying the local demand.

To talk of 5*d.* per quarter affecting the quantity consumed is simply an absurdity.

No station short of Cork has a higher rate for carriage of grain than between Cork and Dublin, 12*s.* 6*d.* per ton.

6837. This is purely a matter of opinion, from which we entirely dissent.

No. 5.—Great Southern and Western Railway—*continued.*

Extracts of Evidence sent to the Company. *Replies received.*

from the fact that he comes in competition with the miller of Dublin, which is the place of import?—No doubt; but then he would be much better able to compete with a moderate rate of freight than with this rate of freight. The rates I have given have been increased materially.

6851. The only result would be that the trade would be transferred from one part of the country to another?—That would be one result, and I would say that a larger trade would be done to some extent.

6852. If the corn went the flour would not go?—No.

6853. Therefore the railway company would not have any more traffic?—The railway company would not have any more traffic than what would be created by the increased business that would be induced by the moderate rates of freight. There might be some points at which the rates of freight would prevent business, and another point at which rates of transit would induce business.

6854. There would be no increase of traffic to the present railway companies?—Not if only the same quantity were carried; but I think a larger quantity would be carried to some extent; to what extent I am not prepared to say.

6855. You think 5*d.* per quarter would seriously increase the consumption?—I think 5*d.* per quarter on oats would, for instance, allow an increased profit to the grower. I wish to allude to the rates charged by the railways generally; they are very unequal; they are not governed by any equal system at all. I have made out a table of the rates on grain, and I find that the governing point is the contiguity of the seaboard in nearly all cases. As between Dublin and Cork, which is a distance of 166 miles, they have a rate of 12*s.* 6*d.* per ton, because the steam competition interferes and reduces it; while to many stations short of Cork they charge a higher rate. The same principle holds good with the northern rates; for instance, the rates to Belfast, Londonderry, Galway, and Sligo; and it will be found that the intermediate rates are considerably higher than the through rates. The whole principle which regulates the making of those rates by those companies is, what they can get, not what is a fair and regular rate.

6856. (*Mr. Horsfall.*) What is the extent of the difference in the mileage rates between the two extremes?—The fare from Dublin to Belfast is 10*s.*, the distance being 113 miles; and the fare from Dublin to Banbridge is 15*s.*, the distance being 87 miles. That is only two-thirds of the distance, and yet the rate is one-half more.

6857. (*Mr. Glyn.*) On the same line?—On the same line, but for a portion of the way.

6858. Not the whole way?—No.

6859. Do you know the respective fares charged by each Company?—I do not. This is the table I refer to:—

Dublin to	s.	d.	Miles.	Dublin to	s.	d.	Miles.
Balbriggan	4	2	22	Clara	9	0	68
Ballybay	15	0	98	Athlone	11	0	78

The Great Southern and Western Company as a rule charge lower rates per mile as the distance the goods are conveyed increases.

No. 5.—Great Southern and Western Railway—*continued.*

Extract of Evidence sent to the Company.

very great as that. There is Lisburn, 13*s.* 4*d.*; that is on some lines 10*s.*, as between Belfast and Dublin; Lisburn is a shorter distance than Belfast by eight or 10 miles. Passenger fares have also been advanced 10 per cent. during the past 10 years on both the Midland and the Great Southern and Western railways.

6861. (*Mr. Glyn.*) On all classes of passengers?—Yes.

6862. In the same proportion?—Yes.

6863. (*Chairman.*) Have you any other suggestions to offer?—Many of the present existing smaller companies are burdened with capital by reason of the difficulties which they had to contend with in their construction; consequently, a large portion of their capital is lost, and the original shareholders receive no dividend whatever. The Streamstown and Clara line originally passed by Parliament as a central through north and south link; it is not now used by reason of the want of arrangement as to times and communication between the Great Southern and Western Railway and the Midland Railway; the traffic is consequently turned back and driven round through Dublin, and the outlay on the part of the Midland Company remains unproductive. The award by division of traffic between the two companies at Clara and Athlone has completely taken away the inducement to either company to develop or induce the traffic at either of these points, as it is manifest when the receipts are thrown into a common purse neither company has the inducement there would be if such were not the case. Steamboat navigation on the Shannon between Athlone and Killaloe had been previously carried on by the Midland Great Western Railway, but has since for the same reasons been abandoned, and the traffic diverted. The Great Southern Company bought the steamers for the purpose of keeping them idle.

6962. If they were willing to be taxed for the purpose, why not try the experiment there?—Ireland is a much poorer country, and therefore the effect would be more striking. England can afford to pay while I do not think the poor people of Ireland can pay. I am persuaded that the true source of profit in Irish railways is to be found among the third-class passengers; but the directors of Irish railways throw every difficulty they can in the way of conveying third-class passengers. On the Great Southern and Western line there are five trains which leave Dublin daily, carrying first and second class passengers, and the result is, that by those five trains they carried in half a year 148,000 passengers, and the income was 60,900*l.* in round numbers. They run but two trains daily by which they carry third-class passengers, and yet by those two trains, running at most inconvenient hours, they carried 243,000, and the income was nearly 35,000*l.* as against 60,900*l.* derived from the carriage of first and second class passengers in five trains.

6963. I will put this to you:—Suppose the experiment to be tried as you have suggested, and suppose that it answered, in so far as it was a benefit to the country, which it no doubt would be, and that it produced a considerable increase of traffic; but suppose that that increase of traffic was still not sufficient to make up, or nearly so, the deficiency produced by the reduction that had been made, do you not think that, in that case, there would be a very heavy pressure put upon the State still to continue those low rates, although the railways would be thereby worked at a permanent loss?—I think that such a pressure, if I can imagine such a contingency occurring, would be put upon the Legislature; but I cannot imagine the possibility of such a contingency in the long run. I should like to mention to the Commission a circumstance which occurred about three years ago, and which I think illustrates this matter. I was travelling with some members of my family from Glengariff in Bantry Bay. I was posting to Cork in the afternoon of a summer's day, and we stopped at Macroom, which is a miserable little town about 24 miles from Cork, to change horses. After leaving the town we met with one of the long cars which are common in the south of Ireland, and this was crowded with passengers. I was astonished to see such a crowd standing round the driver, and I asked our driver the cause of it, and he said that there was an opposition started, and that we should meet in a few minutes another car just as much crowded as the other, and so in fact we did. There were no fewer than 72 passengers coming out from Cork on that summer's evening to Macroom, which of itself was a miserable place, all of them having gone into Cork in the morning, and the driver informed me that before the opposition had been started there had not been a sufficient number of passengers to give profitable employment to one car.

6964. (*Capt. Galton.*) At what rate were they carried?—For 1*s.* for 24 Irish miles, or 30 English miles. Our driver said if any old woman wanted to buy a petticoat, or a man wanted to buy a pair of brogues, they would go into Cork to buy them, as they would have a wider range for selection.

6965. (*Mr. Dalglish.*) Did you make any inquiries as to whether the opposition proved profitable to the car owners?—I only spoke to our driver.

6966. Did you learn from him whether it was successful?—Yes. Every day it was the same.

6967. Was it profitable to the proprietors?—Yes; indeed they could not carry all the persons who applied to be carried. They were carrying the passengers at the rate of about one-third of a penny per mile.

6968. (*Capt. Galton.*) And that was remunerative to the car proprietors?—Yes.

Replies received.

6861, 6862. The increase referred to was not put upon third-class passengers.

6863. If the Streamstown branch line of the Midland Great Western Railway is not more used it is because the traffic is so extremely limited. The line does not earn 17*s.* per mile per week, and it is doubtful if any number of trains would improve it.

The steam packets on the Shannon were worked by the Great Southern and Western Company and the Midland Great Western Company jointly and separately, but always proved a loss to the owners. So also did a loss result to the City of Dublin Steam Packet Company when steamers were worked by them upon the Shannon, and all parties merely ceased working them because they would not pay.

6962. There are three third-class trains a day in and out of Dublin on the main line, and on the branch lines every train carries third-class passengers. Therefore the conclusions relative to the earnings of the different class of trains are fallacious.

6963 to 6969. The fares charged for conveyance of passengers between Cork and Macroom are for the mail car 2*s.* each, and by other cars 1*s.* 6*d.* each, and the distance is 24 miles (statute). These fares have not varied for some years.

The fares by Mr. Bianconi's cars generally are 1½*d.* per passenger per mile.

No. 5.—Great Southern and Western Railway—*continued.*

Extracts of Evidence sent to the Company.

6969. (*Mr. Glyn.*) Does the same system of running cars prevail in other parts of Ireland?—Yes; they are very general over the south and western parts of Ireland.

6994. Will you proceed to do so?—One thing that we complain very much of as merchants is the great inequality in the charges, and also that the through rates are most injurious to our trade in Dublin; in fact, the parties can get *viâ* Dublin or through Dublin goods delivered in the inland towns of Ireland as cheap or cheaper than they can get them delivered from Dublin to those towns. We consider that that is most injurious to us, and that it saps and undermines our trade, in fact, we frequently are obliged to send our goods to other ports in England and have them stored there and reshipped in order that they may be delivered to the western parts of Ireland cheaper than we can have them delivered from Dublin. Our direct import trade or foreign trade is undermined. We have to complain of the very high rates that are charged on the railways in connexion with our travellers, they are a great bar to more frequent visits being paid to various towns in Ireland; many towns they would visit three, four, and five times more than they do if the railway charges were more moderate than they are. We also have a very serious drawback in not being able to have our customers more frequently up from the country towns to visit us for the purpose of selecting their own goods, to judge for themselves, and to be able to come and return quickly. At the present time, in some cases they are not able to come and return on the same day. A case came under my own notice only the other day; a gentleman engaged in business in Dublin wanted to send a number of men down to Tralee in order to set up a brewery, but they found, when he got as far as Mallow, his men could not get on any farther, and they were obliged to lodge in the town and get on the next day; although there were first-class and second-class trains running from Dublin to Tralee on the same day, yet there were no means for the third-class men to go on, and it was a great loss to the men in consequence.

6995. (*Capt. Galton.*) Could not they have gone on second class rather than bear the expense of their lodgings?—The person to whom I have referred was not aware of it then, and it was too late. I do not think it would have been worth while; they might have got lodgings for 2*s.* or 3*s.* in the town, but the difference between the second-class fare and the third-class fare would have been more than that. This was attended with great delay and inconvenience. Then I may mention that a merchant can get his goods delivered in Carlow, *viâ* Dublin from Liverpool, within a very small sum as cheaply as we can get them carried from Dublin to Carlow. In fact it only allows for cartage and the sea fare the sum of 2*s.* per ton, so that in fact, the customers in Carlow, instead of coming to Dublin, are driven away from Dublin, and they go to Liverpool. The Liverpool market may be sometimes a little better for them, but this naturally turns the scale, and they are driven from us to Liverpool.

6996. (*Lord Stanley.*) That is the effect not so much of the railway charges as the nature of the market and the much greater trade that is carried on at Liverpool?—It is entirely the effect of the railway charges.

6997. (*Mr. Ayrton.*) Will you mention the charges upon which your statement is founded?—Indian corn is delivered from Liverpool *viâ* Dublin for 12*s.* into the town of Carlow, whereas the charge from Dublin to Carlow is 10*s.*

6998. (*Chairman.*) What is the freight from Liverpool to Dublin?—About 8*s.* besides cartage through the city.

6999. (*Mr. Ayrton.*) Can you give one or two other items?—Formerly goods were delivered in the town of Bagnalstown, also in the county of Carlow, and they were delivered from Dublin to Bagnalstown without classification for 7*s.*, but since that time, in consequence of an arbitrary classification, they range from 8*s.* 6*d.* to 18*s.* 6*d.*, and the company refused to supply classification lists, and there are no means of checking those bills, so that parties are completely at the mercy of the railway servants. Two days before I left Dublin I sent my clerk to two of the railway companies. I sent him first to the Great Southern and Western, to ask them for a tariff of prices, and I also sent him to the Midland Great Western Railway, which runs to Galway, for a tariff of prices, but they had none; neither of those companies had anything of the kind.

7000. (*Mr. Glyn.*) Have they no published tariff of prices?—No, we never can get proper tariffs of prices, and we are entirely at their mercy as to what they charge. If goods happen to be denominated by different names, they are often charged different prices; for instance, take the case of seed corn; if it is marked "corn" it is charged one price, but if it is marked "seed corn" it is charged a higher price. If it is marked "seeds" it is charged higher again, and it leads to what is not proper, viz., the parties sending seeds into the country mark them all "corn," and in consequence of that they go at a low rate. There is another matter of which we have greatly to complain, the inequality of rates for carrying small parcels. Some railways will not take any package under 56 lbs. weight without denominating it a parcel; some of them now have been taking 28 lbs.; and even within the last few weeks a new light seems to have broken in upon them, for they have reduced that, and the consequence is, that when we get an order for a small parcel of goods, and this applies to gentlemen in the seed trade, who are constantly written to by gentlemen in the country to send them

Replies received.

6994. The number of passengers between Dublin and Tralee do not average over two per train per day. The traffic is with *Cork*, and the trains are arranged accordingly. There are three trains a day each way between Tralee and Cork, and two through trains a day between Tralee and Dublin.

6995 and 6997. The rate.—Liverpool to Carlow is 12*s.*, and Dublin to Carlow is 7*s.* 6*d.* per ton, not 10*s.* as stated.

6999, 7000. The Company do not issue published rates to the public, as they are numerous and complicated, and are subject to constant changes; but all information relative to rates can be had on application to station masters and others.

Corn and seeds are charged differently. The former is conveyed in large quantities, the latter in very small, and the value of the former is much higher than the latter, and the risk much greater.

The minimum weight per goods' train has been 28 lbs. for years, and even this minimum does not apply except when parcels are brought to the company as separate packages, not when accompanying other goods.

No. 5.—Great Southern and Western Railway—*continued.*

Extracts of Evidence sent to the Company.

certain portions of seed in a hurry, if the package should be under 56 lbs. it is charged a very high rate for the carriage; if it should be over 56 lbs., then it goes in as luggage, and the consequence is that we are obliged to do this.—if we get an order for a parcel that weighs 42 lbs., or 40 lbs., or 36 lbs., we make it into a package, and we put stones or bricks at the bottom of the package, so as to make it up to 56 lbs., and then it goes for 10*d.* or 1*s.*, or 1*s.* 6*d.*; but if we did not put those stones in it would cast 3*s.* 6*d.*, 4*s.*, or 5*s.*

7001. (*Lord Stanley.*) What is the explanation of that difference in charge?—We never could get any, and we never can, hardly, get any explanation in Ireland; they give us a regular stereotyped answer, that they will take it into their consideration; they say that they must fix the weight at some point. This week I have learned that the Great Southern and Western Company have fixed their weight for packages at 28 lbs., and the Midland Great Western have fixed theirs at 56 lbs. There are two railways running from Dublin, and they have a different system and different plan altogether; we are not obliged to use so many stones in the case of the Great Southern and Western as in the case of the other railway, and what we should like would be that there should be a proper tariff for the carriage of parcels, commencing, say, at 7 lbs. and going on to 14 lbs. and 28 lbs., to be charged according to the distance carried. I should be glad if the system adopted in the case of the penny postage was carried out, so that they would carry for a short distance as for a long distance, or that it might be divided into 50 or 100 miles; but we have never been able to accomplish this; we can get no redress, and they will sometimes hardly listen to us. It would be a great advantage if our customers and the working classes could be brought to Dublin and be taken back again at low rates. I will take, for example, the rate charged upon the London and North-western Railway, and this is what we want in Ireland. A man can go first class from Dublin to Wigan for 6*s.*, that is including the sea fare, 2*s.* 6*d.*, across *viâ* Holyhead; then he can be carried through Chester to Wigan for 6*s.* The consequence of this is, that a number of working people, labourers and harvest men, go in this way: but in Ireland there is no such thing, for our people are shut up in the towns in which they were born, and they cannot get out of them; there they are mixed up, and there are no means of giving them improvement or enlightenment, or the means of earning their livelihood in any way. I made a memorandum in Dublin as to the inequality of the charges made on the same railway; for the sum of 5*d.* they carry for a distance of 25 miles a certain article of commerce, and they charge 5*d.* for 36 miles, and they charge 5*d.* for 51 miles, on the same railway.

7002. (*Capt. Galton.*) Do you mean on the same part of the railway?—Yes.

7003. At what places are these charges made?—From Newbridge 25 miles; from Maryboro' 51 miles; from Monastereven 36 miles; for a certain article of commerce they charge the same rate. I am now referring to a large soda water manufacturer, and this is the charge for a hamper of soda water.

7004. Would not the effect of that be, that the soda water would be sold at the same price at the different places?—It is a great drawback to trade, and the object of this is to show the inequality of the charges upon the same railway for the same goods.

7005. Is not the effect with regard to the soda water this, that each retailer of the soda water who has it sent to him at the same price gets the same profit out of it at each place?—The price is fixed; there is no rule as to profit.

7006. The soda water is delivered at the same price at the three places?—Yes.

7007. If the railway company can afford to carry it at that price, the man who lives farthest off receives it for the same charge?—No; the three towns pay different rates of tariff for the same article.

7008. Different rates per mile?—For the same sum they will deliver a certain parcel, carried 51 miles for 5*d.*, also for 25 miles for 5*d.*, and also for 36 miles.

7009. Just as the post office will carry your letters?—Yes.

7018. (*Mr. Ayrton.*) Can you give any other instance, besides the single one you have already given, of Indian corn being conveyed to Carlow, the rates from Liverpool being to the same place in Ireland less than from Dublin to that place?—There is a house in Dublin which gets one description of goods carried from Dublin to Cork for 5*s.* 4*d.* per hogshead, and the charge for another description of goods is 10*s.* 11*d.* per hogshead; one article is ginger cordial and the other is ginger wine. There is really no difference in the value, but one has a greater name than the other.

7019. What is the selling price of the article?—Perhaps 5*s.* a gallon each, but one has a nicer name than the other, consequently it comes under a different tariff, although of precisely the same value and weight.

7033. (*Chairman.*) Do you send goods to Cork at a lower rate than they are charged to such places as Templemore and Mallow?—Yes, we do.

7142. It would be profitable to the railway companies, you think, to lower the rates?—I think they would have more to do if they did so.

7143. That being so, why cannot you make them understand that?—We have written frequently to the chairman of these boards. I have written frequently to the directors of the Great Southern and Western line as to a lower tariff instead of the higher charges from Dublin to

Replies received.

7001 to 7009. The rates for soda water from Dublin are,—

	s.	*d.*	
To Newbridge	4	6	per ton.
To Monastereven	5	9	„
To Maryboro'	7	6	„

7018, 7019. This is wrong. The rate for ginger wine, Dublin to Cork, is 15*s.* per ton. Ditto for cordial.

7033. This is not the case; witness is in error.

No. 5.—Great Southern and Western Railway—*continued.*

Extracts of Evidence sent to the Company.

Cork, to enable us to compete with the Liverpool men, but they will not consent to it. The chairman stated that he should have to alter the whole tariff if he lowered the rate in one case, and the Liverpool people would cry out against him.

7144. You cannot persuade the railway directors that it would be a profitable thing for them to do?—I cannot; they will not yield; we could supply the Cork market with soap if they lowered the carriage of soap one-half. There again it is a matter of profit on the article, which is so very small.

7145. In Cork what is the competition against the railway that prevents your sending your soap by the railway; is it the sea carriage from Dublin to Cork?—Yes; and from Liverpool to Cork.

7146. They can get it cheaper at Cork by having it brought round by sea from Liverpool?—The Liverpool parties can supply Cork with soap cheaper than the Dublin people can.

7147. That is to say, the freights from Liverpool to Cork are cheaper than from Dublin to Cork?—Yes. I have a table here which Alderman Mackie sent to me, showing the through rates from different towns in England to different towns in Ireland, showing the various relations of one to the other, and how they affect his trade. He is a seed merchant, and he intended to have accompanied me over to have given his evidence; but just as I was starting his young man came and handed this to me on board the steamer, but without any explanation. It is a very interesting table, and I dare say the Commissioners would like to look over it (*handing in the same. Vide* Appendix AN.).

7148. (*Capt. Galton.*) Do you consider that these various grievances which you have been detailing are sufficiently important to call for the intervention of the Government?—I think they are.

7280. Are there any other matters to which you wish to call the attention of the Commission?—Mr. Robert O'Brien intended to have been here to give his evidence as to the cattle traffic, but I have received a letter from him in which he states—"My Dear Lord Mayor,—I regret "that other engagements prevent me from attending to give evidence. "The railways have advanced the charges for conveying cattle and sheep "fully 20 per cent. the last ten years, and in addition charge the drover "on his return; this has caused great dissatisfaction, and the results "are as follows:—Many drive their stock to market in place of railing; "others have turned to other markets, for instance, parties from Tippe-"rary and that district who prefer Dublin have, in consequence of the "increased charges, turned to other markets, Waterford and Bristol, "&c. I would write more fully, but am in haste to catch the post." He is one of the most experienced sales masters in Ireland.

Replies received.

7144. The rate for soap, Dublin to Cork, is 15*s.* per ton. Ditto, Liverpool to Cork, 15*s.* per ton.

7280. The increase on Great Southern and Western line was 10 per cent., not 20 per cent.

The lowest rate ever charged for cattle was an average of $5\frac{5}{10}d.$ per truck per mile, owners taking risk; the highest rate ever charged was $5\frac{7}{10}d.$ per truck per mile, the company taking the risk.

No. 6.—Irish North-western Railway.

6331. To whom should you look to prevent the multiplication of lines which from want of traffic cannot pay?—The object would be to prevent the formation of injudicious lines or any lines of railway that would not pay. My belief is that the network of railways would be very extensive, and I firmly believe that a well-regulated system would pay immensely, and cause an enormous amount of traffic to be developed. The next benefit would be this, that there would be a great deal of saving to the shareholders, for the results of the present system of railway management by separate boards has been most disastrous. The Commission may be aware that the Irish North-western Railway is in a state almost of bankruptcy or utter insolvency, even with respect to its preference shares, and some other lines are altogether stopped. This state of things arises partly from the want of a properly responsible body to regulate the accounts, for the object of the railway directors has always been to raise a dividend at almost any sacrifice, little considering what might be the result of the steps taken for the immediate purpose of raising a dividend. The auditors as at present established are of no use in controlling the expenditure or in certifying the correct state of the accounts. All that is submitted to them under the Acts of Parliament, or at least under the Acts of Parliament relating to the railways with which I am connected, is limited to their looking through the papers which are submitted to them by the railway directors themselves.

6332. (*Capt. Galton.*) Are you speaking of the auditors appointed on behalf of the Baronies?—I mean the auditors who are appointed by the shareholders; they are no security whatever to the shareholders.

6333. But the shareholders have it in their power to require an efficient audit to be made?—Yes; but the shareholders are very well pleased if at the half-yearly meetings a good dividend is announced, and they are not at all curious to ascertain whether the auditors have exercised a sufficient control. The auditors cannot do that because they have not the power to call for all the papers that they may want, and it is no part of their duty to determine what is for capital and what is for revenue. The result is that a great deal of money is appropriated to capital which ought to be appropriated to revenue.

6334. (*Lord Stanley.*) You put it in this way, that many of the Irish railway boards are incompetent or are unwilling to conduct the affairs of their company in a business-like manner?—I think, from the circumstance of their constitution, they are almost compelled to study how to create a dividend, in order to raise the price of the shares in the market.

6331. A copy of the last balance sheet of the company is sent herewith, which the directors are willing to submit to any test or verification that the Royal Commission may be pleased to apply to it.

It is submitted that there is no ground for the statement that the company is "insolvent."

No. 6.—Irish North-western Railway—*continued.*

Extracts of Evidence sent to the Company.

6335. (*Lord Donoughmore.*) To keep the shareholders in good humour?—Yes.

6336. (*Mr. Ayrton.*) May we infer from this that they conduct the business in the most profitable manner?—I do not wish to impugn the conduct of the directors. I believe that they have been appointed to perform a certain duty, and they have to consult what they think are the interests of their constituents.

6337. Do you think that they are deficient in intelligence in arriving at the proper mode of doing it?—I think that they are not under due control, and not under the control they ought to be to make these establishments permanently beneficial; there is a continual increase of charges upon capital which there ought not to be.

6338. (*Lord Donoughmore.*) Is there not also this to be taken into consideration, that a board of directors which is not very prosperous in the way of earning revenue is very much tempted to starve a line, and to postpone necessary repairs and expenditure of that sort, which ought to be current expenditure, to be carried on every year in order to increase the permanent revenue?—I believe that to be so. The company that I am connected with has suffered severely, whether rightly or wrongly, from the imputation that such was the case. A severe accident occurred in which some lives were lost, and the company was put to a very heavy amount of expense, That was owing to the line having been, in some degree, starved; undoubtedly the line did require more repairs than it had received, and that is, at this moment, the cause why I believe the line will pay a very bad dividend if it pays any.

6358. (*Mr. Ayrton.*) Speaking of purchasing the Irish railways, have you considered the basis or the principle upon which the purchase should be made?—That, I think, is laid down in the Act of 1844, according to which there are averages to be taken over three years upon the value of the shares, and to 25 years' purchase upon that is to be tendered, but that an option shall be given to the shareholders, if dissatisfied, to go to arbitration; and I think that that is equitable, although there might be some cases in which the arbitration might be on the side of the shareholders where the railway was under a temporary depression, and there might be circumstances to justify something more being done. But to have some guarantee for this large property in Ireland, upon which about 20,000,000*l.* have been invested in share capital, is of the utmost importance, and the want of some proper arrangement for the security of that property has been most severely felt. In one railway company, with which I am connected, the Irish North-western, as to the entire of the preference shares, which were supposed to be such an undoubted security that even large charitable trusts might avail themselves of them, they have become perfectly insolvent; the interest was to have been 5 per cent., and the whole thing was thought to be as sure as the funds of England, when all of a sudden, for the want of a proper audit and proper control, it appears that there was nothing with which to pay a dividend.

6530. Is the fare that you pay for a return ticket from Omagh to London, three guineas, the ordinary fare, or only the fare paid for a summer excursion?—It is the ordinary fare. I believe you can get it at any time of the year. I was lately in Londonderry, and I was talking of coming to London, and my friend said, "You had better get your ticket here, go to Strabane, come back again, and pay us another visit, instead of going to Dublin, and you will save a few pounds."

6531. (*Capt. Galton.*) But that would have been by a longer sea passage than the other way?—Yes.

6532. In consequence of the longer sea passage, passengers might be induced to go that way by charging them smaller fares?—I suppose that is an element in the matter.

6533. Is not this an analogous case: a passenger may go from London to Paris by two routes; if he goes by Newhaven and Dieppe he will pay 30*s.*; but if he wishes to go by the shorter sea passage he will have to pay twice as much?—There is something in that, no doubt; but I think the case I have put is a stronger one, although I admit the principle is somewhat the same.

6534. (*Chairman.*) To go back to the question of goods, a merchant at Liverpool who received an order to send goods to Omagh would bring them to Omagh on cheaper terms than a merchant in Dublin?—Yes.

6535. Which no doubt the Dublin merchants consider very unfair?—Yes, they think so. The facilities afforded to travellers from the north-west parts of Ireland to Dublin are very bad. I reached Omagh some

Replies received.

6530. The fares very between Omagh and London according to route; the most expensive route is that viâ Kingston and Holyhead, but it is the most desirable, having the shortest sea passage, and the most efficient service both by sea and land.

The through fares decrease in amount as the route becomes more northern and circuitous.

6531. The route possessing the shortest sea passage will always command a preference and in most cases a higher fare, provided other things are nearly equal.

6532. Passengers may from motives of economy be induced to travel by circuitous routes by charging them smaller fares.

6533. The answer to last query will apply to this also.

6534. There are no rates quoted nor description of goods referred to quoted; and as the rates for goods vary somewhat according to the description of them, it is necessary to know this in order to give a correct explanation; but it may be stated that Omagh is distant from Dublin by rail 144 miles, whereas it is distant from its nearest port, namely, Londonderry, only 34 miles, and there are steamers plying between Londonderry and Liverpool direct at exceedingly low rates of charge. The rates for goods between Dublin and Omagh by railway are very moderate.

6535. There is very ample and sufficient train service between Omagh and Dublin. There are two routes, namely, *viâ* Enniskillen

No. 6.—Irish North-western Railway—*continued.*

Extracts of Evidence sent to the Company.	*Replies received.*
time ago about one o'clock in the day, and unless I should sleep a night on my way to Dublin I could not get to Dublin until five o'clock in the afternoon on the following day.	and *viâ* Portadown, and each of these routes has two day trains through.
6536. Will you be good enough to explain that?—There is no train from Omagh after about half-past 11 or 12 o'clock in the day. I reached Omagh about one o'clock, after that train had departed that would have taken me to Dublin, but it would not reach Dublin before half-past five o'clock on the following day.	6536. Considering there is no through passenger train during the night, 3.30 p.m. is by no means an early train to commence so long a journey as from Omagh to Dublin. Passengers leaving Omagh at 3 o'clock would reach Dublin at about 10 o'clock at night, which the public consider quite late enough. A prior through day train leaves Omagh at about 11.30 a.m., and reaches Dublin at about 5.45 p.m. This train is well adapted for the generality of passengers, and for passengers going to England *viâ* Kingstown and Holyhead.
6537. Is there not a night mail train?—No, nothing goes through. You must sleep on the road.	6537. Not to carry passengers.
6538. Is that by the Portadown route or by the Enniskillen route?—By either route.	6538. There is no night mail train by the Enniskillen route. This is considered by the people of a large district of country in the north-west of Ireland to be a serious defect in the mail service.
6539. Although there is competition?—Yes. You cannot go from Omagh to Dublin, and spend a day in Dublin, without being three days absent from Omagh. One of the directors on the Irish North-western line told me that if there was a facility for going from Omagh to Dublin, which is only a distance of 86 Irish miles north of Dublin, there would be six times the traffic in passengers, he thought, upon that line, for people would continually go up to Dublin; but the having to spend two nights in Dublin is so expensive that they are obliged to consider how they shall avoid that expense, and they will wait for a fortnight, or even three weeks, in order to do their business on one trip, instead of going up weekly or fortnightly.	6539. A person going from Omagh to Dublin on business and back, and wishing to have one clear day in Dublin, from midnight to midnight, must necessarily be occupied for three days more or less, but a person can go from Omagh to Dublin on one day, have the whole of the next day up to 2 p.m. in Dublin, and return from Dublin by the train at 2 p.m. which runs through direct to Omagh and Derry.
6540. Did that director tell you the reason why the railway company did not grant proper facilities to the public?—Although a director, he told me that he could not understand it. He stated that he had advocated it, but that he was outvoted in the direction; and more than that he stated that he was a director on the line *viâ* Enniskillen to Omagh from Dundalk, and he said that if a train run into Dungannon in the after part of the day it might go on to Omagh and come back again the next morning; and he also said that as long as that train came on he would continually go by it, although he had a free passage on the other line. He has been anxious about that, seeing that the advantage from it would be so great.	6540. See answer to Query 6535.
6541. I am afraid that the Irish North-western line is the great difficulty just now?—It is the general impression that the directors are attending more to financial questions than to the development of the traffic. I may mention what I think is rather a curious illustration showing how they do not develope the traffic. I have been asked whether I could not get on at night to London. I was in company with a noble lord who wished to get on, and I said to him, "I suppose your lordship will not do what I shall do; I shall take a post car to Mullingar, and I shall get on to the steam engine, and so get on to Portadown." They would not take me in a carriage, and I cannot find out what the reason is. I got on to the steam engine. It was important to me to get to Dublin that night, and there was no other mode; I therefore got on to the engine, which took me to Portadown. I then got into the mail train from Belfast, and so on to Dublin. It appears strange that they should employ an engine to carry the mails and not to carry the passengers. This has been going on for some time; it is not an accidental thing.	6541. The statement about the post car to Monaghan, to catch the night mail train from Monaghan, has no reference to the Irish North-western line, except so far as to show the want of a night mail service over that system.
6542. Is that engine despatched at such an hour that if there were a train it is not likely passengers would go by it?—When there was a mail coach on that line it was used very much; but when the railway was opened it had the effect of doing away with the mail coach. They try to induce all the passengers to travel by the day mail, in order that they may have a greater number going in the day time, instead of dividing them between the day and the night.	6542. At the time the mail coaches were running no doubt there was, comparatively speaking, a good deal more travelling during the night, for it was a matter of necessity from its tedious nature. The introduction of railways has, however, wrought a great change in the habits of the public in respect to travelling.
6543. Then since the opening of the railway the amount of accommodation given to the public has been diminished?—It is very much less, because before they had coaches both in the day time and at night, and now they have only one mode of conveyance in the day, which would not reach Dublin at a sufficiently early hour to enable them to transact the ordinary business that arises. The train from that country to Dublin does not reach the city until about half-past five.	
6555. How would you propose to remedy that inconvenience?—At that particular point the company have to pay the wages of two keepers. It was a most awkward crossing, and two or three years ago this same gentleman, Mr. Senior, assisted in making the crossing better at an expense of 300*l.* or 400*l.* If a tunnel could have been put under the line there, which the present engineer of the line stated would only have cost 1,500*l.*, the 1,500*l.* capitalized at 5 per cent. would not come to so much as the cost of the two keepers; it would only be about 75*l.* a year, which I believe would hardly pay the two gatekeepers. Again, at Blanchard's Town, they might have an over crossing at about the same cost.	
6556. You are of opinion that either the Board of Trade or some Government authority should have a general power to oblige railway	6556 and 6558. Up to the 1st June last there was a very efficient through train service

No. 6.—Irish North-western Railway—*continued.*

Extracts of Evidence sent to the Company. *Replies received.*

companies to make alterations in their works if they were considered necessary for the safety of the public?—I am. I believe that at the present time their financial difficulties stand very much in the way of what they themselves see ought to be done. There is hardly a railway now that has not fallen into a state of financial difficulty, the Midland line particularly. I was on the line myself about a fortnight ago, going from Mullingar towards Cavan, and there was a gentleman in the train, a friend of mine, going to the North-western, and he said, "It is too bad; "this train will be just too late for the Cavan train, so that I may be "detained, and not get to my destination to-night." I said, "How "can you remedy this?" He said, "If I can get the engine driver to "put on the steam, I shall be in time for the Cavan train," that is, the train going to the North-western.

6558. Do you know that the little line from Cavan to Clones belongs to the Irish North-western Company?—I think it is the Ulster Company, I think that the Ulster line meets the Irish North-western line at Clones. In this morning's paper I observed a letter which alludes to the very thing which occurred to myself about three weeks ago, and which is quite illustrative of the arrangements in the part of the country to which it refers, and which I will, with the permission of the Commission, read:—

"Through traffic between the West and North of Ireland. Sir, I arrived at Cavan on Monday last from Westmeath *viâ* Midland Great Western Railway at 4.50 p.m., fully expecting to be taken, as heretofore, by the Irish North-western line to Dundalk. This company had, however, without any public notice that I could discover, (except some placards hastily posted at northern stations,) a few days previously altered their train to start from Cavan 15 minutes before the arrival of the Midland Great Western train, and (as one of the latter company's officials stated to me) without giving them more than a day's notice or so of the intended change. I was obliged to remain in Cavan until 11.15 a.m. next day. Was brought to Clones junction 20 minutes behind time, and five minutes late for the train to Dundalk, which they profess to meet, and was obliged to remain there two hours. Such treatment of the public is disgraceful.

"I remain your obedient servant,

"Thomas W. West.

"Rath, 16th June 1865."

6736. (*Capt. Galton.*) But the solicitor who acts for two railways I presume gets double profits?—He does, no doubt; and therefore it strikes me that one or two solicitors, paid liberally, who should give their whole time to the work, under a commission similar to one that I would suggest, and which I hope eventually to see, would do all the work of the 56, and do it better, as they would have their whole minds devoted to it. As I have before said, there are 56 secretaries, and upwards of a 100 engineers. Some of them have but one, but some have three. There is the engineer in chief and the managing engineer, and of course, if the Government worked them under a commission, they would require a staff of engineers, but only as many as were essential to keeping up the lines. I cannot give you the amounts, but they could easily be ascertained, and I think the commission would find that an enormously large sum of money is disposed of; of course it is taken out of the receipts of the railways before the proprietors come to be paid any dividend. It follows, as a matter of course, that these people must all be paid, and I believe you will find that a very large amount of the receipts go in that way, and that is one reason for saying that I am satisfied if the 56 railways were under the management of one board a vast saving of expense would be the result, and harmonious action would ensue. The railway companies do not pull very agreeably together; for instance, between Galway in the west and Belfast there are three distinct lines of railways, and last season I grew a large quantity of flax, and I got my tenants to grow a good deal, and I found it almost impossible to get it forwarded to Belfast. I could find no market for it in Galway, and I applied to the Midland Company to know what rate they would charge me per ton to Belfast, and although the lines are united, as far as having junctions with each other, from some misunderstanding the Midland Company could only book the flax as far as Cavan, where their line stopped, and to Cavan I had to send my steward to get it booked from Clones on to Belfast. There are two or three lines between Cavan and Belfast, and I am told it often happens that the train leaves Cavan for Clones on the Belfast line a few minutes before the arrival of the Midland train, and the passengers have to stop at Cavan for the night, and this arises from the want of unity of action between the companies.

6737. (*Lord Stanley.*) Does that arise from any proceedings on the part of persons locally interested in the town?—It is a misunderstanding between two companies; they do not afford accommodation to each other. The lines are, however, united, and they might, if they pleased, very easily work conveniently. The result of this state of things is that the Galway people actually go to Dublin, and then go to Belfast from Dublin, a distance of upwards of 50 miles, although they have a direct communication. There is a want of thorough through traffic arrangements between the companies. Between Belfast and Dublin there is a very large traffic indeed, and yet there are three companies separate and distinct upon that part of the line. All this would be avoided if the whole of the lines were worked under one management.

6829. I may also mention that there is hardly any point to which a

each way daily between the Midland Great Western system and the whole of the south of Ireland on the one hand, and the whole of the north of Ireland on the other hand, *viâ* Cavan and Clones; but on the 1st June last alterations were made in the train service between Dublin and Belfast which were of such a nature as to compel the Irish North-western Railway Company to remodel almost the whole of their time tables, and as the times of their main line trains were altered, the branch line trains were of necessity altered to correspond.

This entailed an alteration of the trains between Cavan and Clones, without which the trains on the Cavan line would have been to a serious extent disconnected from those on the main line. This change has altered the trains from Cavan so that they are not in immediate correspondence with the Midland trains arriving there.

The natural remedy for this is an alteration (which would not be a considerable one) of the Midland Great Western Company's down train to Cavan. The Midland Great Western Company have been repeatedly requested to make this necessary change, but although they admit the necessity of it they have not as yet carried it out. A reference to the time tables of May and September last (enclosed herewith), which are the time tables prior and subsequent to the 1st of June, when the alteration was made, will shew this matter clearly. All railway companies are occasionally necessitated to make changes in their time tables. The Irish North-western had to do this in consequence of alterations on the coast lines; and it is for the Midland Great Western Company to explain why they have not altered their train to Cavan.

In the direction from north to south there is a very good continous train service *viâ* Clones and Cavan, as will be seen by the time time table.

The Irish North-western Railway Company has always endeavoured to give to the public the fullest possible amount of travelling accommodation. They give third-class accommodation by all their trains, and they issue by all their trains third-class return tickets at about a fare and a half, allowing one, two, and three days for return according to distance. Besides this, they give third-class market return tickets on some portions of the line at single fares, and they give during the summer months a great amount of facilities for excursions.

They are, however, greatly impeded by the want of co-operation on the part of the companies with whose lines they are compelled to work in connection.

The directors take the opportunity of stating that in their opinion it would greatly benefit the public, increase the traffic, and lessen expense, if all the lines north of Dublin were amalgamated.

No. 6.—Irish North-western Railway—*continued.*

Extracts of Evidence sent to the Company. *Replies received.*

third-class passenger can go and return in the day; at some points he cannot make even the direct distance in one day. Facilities are not granted; branch lines worked by small companies prove a serious obstruction to traffic by want of unity of management and antagonistic interests conflicting. They are consequently frequently used as block lines, and to impede the traffic, as, for instance, the Clowes and Cavan line, which was passed by Parliament with the view of carrying the through central traffic between Belfast and the south, and in consequence now it is very rarely used for that purpose, because the trains are so timed that the passengers cannot use them at all. When they get to Cavan they find that the train from Cavan has just left.

No. 7.—Ulster Railway.

Observations by Ulster Railway Company on Replies of Secretary of Newry and Armagh Railway Company to Questions 4964 to 4984 inclusive.

4964. (*Chairman.*) You are, I believe, the secretary of the Newry and Armagh Railway Company?—Yes.

4965. Have you any statement to make with reference to the traffic on your railway?—Our traffic is very seriously interfered with by the competitive measures of the companies with which we are connected. The Ulster Company, which joins us on the north, has possession of a line from Belfast to Monaghan and Clones; and then the Dublin and Belfast Junction Company, which is one of the lines between Dublin and Belfast, joins us at the southern end; and between those two companies a system has been pursued for the purpose of diverting the traffic from our line. The existing lines between Newry and Armagh may be described as a triangle, of which our line forms the hypotenuse, there being communication *viâ* Portadown by the other two sides. Of course we have the opportunity of carrying the traffic at much lower rates than the other companies, and if we were not interfered with we should, I may say, command the entire of it. We have applied to them for through rates over our system to the various stations with which we do business, but that has been refused, with the exception of to and from the town of Newry. They agreed upon through rates with us in reference to Newry, but upon the new section of our line, which is between Goragh Wood and Armagh, which was opened in August last, they have refused us.

4966. (*Mr. Glyn.*) They will take any traffic from you which you give them, which goes from Newry to Armagh, but they will not give you any traffic at Armagh to take to Newry?—No, except that which they cannot avoid. They will send it round by the old route, that is by Portadown. Our business communications and the trade of the port of Newry lie very much in the Monaghan and Clones districts, to which we have no independent access. The Ulster Company wish to draw the trade to Belfast, and they do that by giving low rates to merchants in that locality, and refusing the Newry and Armagh Company.

4967. What is the class of traffic that comes from Monaghan and Clones?—That is chiefly inwards traffic from Newry. There is not much export trade from that district to Newry. The trade consists chiefly of importations from Newry.

4968. Of what sort?—Coals, grain, timber, and iron.

4969. Is there much coal traffic?—It varies.

4970. Will not they give you through rates for that coal traffic to Monaghan and Clones?—They refuse through rates, and, of course, the coal traffic is included?—There is a great deal of traffic in grain and bread stuffs in that district, and there are some extensive mills. There is also a traffic in slates, timber, and agricultural produce.

4971. Do they want to force you to amalgamate with them?—They do not want us to amalgamate, but they want us to agree to a proposition which they made, that the two routes, namely, the direct route between Newry and Armagh, which belongs to our company, and the route through Portadown, which belongs to the two companies I have spoken of, should be placed on terms of equality as regards fares and rates.

4972. That the charge should be equal for the long distance and the short distance?—Yes.

4973. And that you should divide the traffic?—Yes, practically.

4974. (*Mr. Glyn.*) How many miles do they carry their railway in competition with you?—29 miles, and the direct route is 21 miles, so that there is nearly a difference of one third in our favour. So far as passenger traffic is concerned, we should get it, but with regard to goods traffic, the distance does not tell materially in our favour.

4975. You do get passenger traffic?—So far as Armagh is concerned, but not as far as Monaghan and that district is concerned.

4984. So that practically they shut you out from all that traffic?—Yes; some of the merchants in the grain trade carry on a very extensive business, and would send a large quantity of traffic over our line if there was a through rate, and there are also minerals in large quantities to be carried.

4988. (*Chairman.*) I suppose when you made a railway of your own, you expected to be able to make arrangements with the other com-

The Ulster railway line, extending from Belfast to Clones, 64½ miles, was opened to Armagh in the year 1848. In the year 1852 the Dublin and Belfast Junction Company's line, extending from Drogheda by Newry to Portadown, 55½ miles, was opened to the latter town. In the year 1854 the line of the Newry and Armagh Railway from Newry to join the Dublin and Belfast Junction Railway at Gorah Wood, 3½ miles, was opened for traffic, and the line between Gorah Wood and Armagh was opened about 12 months ago, prior to which all the railway traffic from Armagh, and westward to and from Newry, was carried by the Ulster Company's line to Portadown, and thence by the Dublin and Belfast Junction line.

It is not true that the Ulster Company have refused through booking on the new section of the Newry and Armagh Company's line between Gorah Wood and Armagh, as stated in reply to questions 4965, 4966, and 4970, the fact being that the Ulster Company offered to through book between all stations on their line westward of Armagh to Newry, over the entire of the Newry and Armagh Railway Company's line, and to make the rates equal by both routes, so that the public could select whichever they pleased; but the Newry and Armagh Company insisted that a higher rate should be charged by the old route in order to force the traffic over the new one, to the great disadvantage of the companies who constructed their lines in the confident reliance of having the traffic which the Newry and Armagh now desire to obtain, not by that legitimate competition (tending to the public advantage) which was fairly offered to them. In answer to 4974, the witness practically admits that by conveying the goods traffic over the longer route the public suffer no inconvenience, but asserts that his company should get the passenger traffic; if so, why do they not avail themselves of the offer to book through to their line, and let the public have the benefit of the advantages they claim to possess.

In reply to the answer given to question 4988, under the Newry and Armagh Com-

No. 7.—Ulster Railway—*continued.*

Extracts of Evidence sent to the Company. *Replies received.*

panies?—Certainly. Another point which has been a great disadvantage to us is, that we have been obliged to use the Ulster Company's station at Armagh, when we expected to have an independent station, and the result is that, the lines being unquestionably competitive, they have learnt all our rates and special arrangements, and it has been impossible for us to compete or hold our ground.

pany's Act of 1859, that Company were authorized to use the Ulster Company's station at Armagh, and the terms and conditions of and payments to be made for such use have been settled by award of the Board of Trade, probably since Mr. Fearnly's evidence was given, or he would have stated the fact.

In conclusion, it is submitted that instead of unfair pressure on a company coming into a district already supplied with railway accommodation, and admittedly basing its expectations of profit on what they expected to divert from the old route, that the old companies met them in a liberal spirit.

No. 8.—Waterford and Limerick Railway.

2053. Will you state what the fares were then?—The fares were raised to Rathkeale, which is an important market town, from 2*s.* 6*d.* first-class, 1*s.* 10*d.* second-class, and 1*s.* 1*d.* third-class, to 2*s.* 10*d.* first-class, 2*s.* 2*d.* second-class, and 1*s.* 5*d.* third-class. The total numbers carried to Rathkeale in 1862 were 87,256; in the year afterwards, when the increased fares came into operation, they fell to 71,383; and in 1864, to 63,046. A little steamer connected with the line and carrying passengers from Foynes to Kilrush, which was called the Kelpie, during the four and a half months of the summer of 1858 was plying at opposition fares of 1*s.*, from Limerick to Kilrush, and she carried 14,047 passengers, producing 1,358*l.*, which would give for the half-year 18,729 passengers, or 1,810*l.*

The alteration of fares was tried as an experiment; but since 1st March 1865 the following raised fares are in force between Rathkeale and Limerick, a distance of 17¼ miles:—

1st, 2*s.* 1*d.*; 2nd, 1*s.* 7*d.*; 3rd, 1*s.* 2*d.*

It is considered that the diminished results given in evidence of travelling, are rather to be attributed to the harvests for three successive years, and to continued depopulation of that district of the country.

2054. What season of the year was that?—The summer season; the traffic of that line is chiefly a pleasure traffic. Kilkee, to which the passengers repair from Kilrush, is a considerable bathing station.

2055. (*Earl Donoughmore.*) A sort of Ramsgate?—Exactly. The numbers for the half year ending 31st December 1859, which is the next season after the opposition fares had been in operation—the fares were raised to 3*s.*, 2*s.*, and 1*s.*,—were 14,997 passengers, producing 1,702*l.*; and in the two last seasons, the fares being 4*s.*, 3*s.*, and 2*s.*, the numbers were for the half-year ending 31st December 1863, 8,304 passengers, producing 959*l.*, and for the half year ending 31st December 1864, 10,362 passengers, producing 1,138*l.*, so that it would thus appear that a reduction of more than one-half produced exactly the same amount as did the very highest fares that they charged.

The opposition fares in question resulted in a positive loss both to railway and steamer, and, having regard to the distance passengers are carried, viz., 46½ miles (from Limerick to Kilrush) the existing rates of 4*s.*, 3*s.* and 2*s.* are low indeed and unremunerative.

2128. (*Chairman.*) Are there any other points which you wish to direct the attention of the Committee to in connexion with Irish railways?—I intended especially to have drawn attention to the undue proportion which the cost of carriage of the agricultural produce of our poorer lands bears to its value. Considering that Irish agriculture has now to compete with the entire world, and that we are transferring part of our population from the poor lands of Ireland to the richer ones of Illinois and other portions of America, that, in fact, in the case of a large number of poor farms, the rates of carriage to the markets amount to nearly the rents in some cases, any substantial reduction of fares on the lines, especially with differential rates such as I have alluded to, would be one of the greatest advantages which could possibly be bestowed upon Irish agriculture,

The directors would be glad to reduce the rates in question on being assured that such reduction would not exercise a prejudicial influence on their income.

2129. (*Earl Donoughmore.*) Are you aware that it costs less money to transport a fat bullock from Normandy to London than it does from the pastures of Limerick to London?—Precisely. A friend of mine was actually disposed to go to Holland and buy store cattle and take them to Galway to fatten, and he expected a very considerable profit upon them.

2314. Will you state generally to the Commission on what points you have to make complaint; first as to the passenger traffic?—With respect to the passenger traffic, it is generally complained that the charges are too high, which prevents that intercourse with the western districts of Ireland that we would otherwise have if we had a lower rate upon the traffic from the metropolis and a lower rate of passenger charge.

The directors submit that their passenger fares present a favourable contrast with those in force on English lines of railway for similar distances, as instances of which they beg to call attention to the following:—

	1st Class.	2d Class.	3d Class.
	s. d.	*s. d.*	*s. d.*
Limerick to Limerick Junction, 22 miles	4 0	3 0	1 10
Limerick to Clonmell, 49 miles	9 2	6 10	4 1
Limerick to Waterford, 77 miles	14 6	11 0	6 5
Waterford to Tipperary, 52 miles	10 0	7 6	4 5
Waterford to Limerick Junction, 55 miles	10 4	7 10	4 8

These charges give a sufficiently accurate idea of the general scale, and it will be thus perceived that the average is practically as follows:—

1st class, 2¼*d.* per mile; 2d, 1¾*d.* per mile; 3d, 1*d.* per mile.

The Commission is reminded that the secretary of the Waterford and Limerick Railway Company proposed on the 19th July last that the authorized tariff of passenger rates should be reduced one-third, the Government advancing funds at the rate of interest charged under the Harbours Improvement Act, to redeem the company's bonded debt and preference capital, as such redemption should become from time to time available. This proposition gives evidence of their desire to make every reasonable concession in favour of the travelling public without materially depreciating the value of their property by a serious diminution of income.

To accommodate the rural and agricultural population of the southern provinces of Ireland market tickets are issued at all seasons from stations on the main and branch lines to the principal market towns of the district. These tickets are third class, and are always issued at a fare and a half, which is generally equivalent to a mileage rate of less than three farthings, and never exceeds that limit.

Since the beginning of the summer season, in this and previous years, excursion trains have been very frequently run on the main line and on the several tributaries worked by this company at extremely moderate rates. The following may be quoted as an example:—

From Waterford and Limerick and back, a distance of 154 miles, 1st class, 5*s.*; 3d class, 2*s.* 6*d.*

Detailed particulars can be obtained on reference to the printed notices furnished herewith.

No. 8.—Waterford and Limerick Railway—*continued.*

Extracts of Evidence sent to the Company.	*Replies received.*
2323. In the opinion of business people at Limerick is there a sufficient number of trains each way daily?—We want a four o'clock train from Dublin to Limerick; the train at present leaves at one o'clock and arrives at half-past six, and the persons engaged in trade travelling from Dublin consider it a very great inconvenience to be obliged to leave so early, or they must wait till a late hour.	This four o'clock train connexion has been resumed as from 1st July 1865.
2340. (*Chairman.*) Do you believe that any large number of persons in Limerick are prevented from going to Dublin for want of sufficient railway facilities?—Yes; I think that a great many persons would travel to and from Dublin if there was a lower rate of charge.	Doubtful. The present charges are considered reasonable.
2411. Will you be good enough to state the nature of those complaints?—Some time since the different railways into Limerick, the Great Southern and Western and the Waterford and Limerick, carried goods through from Liverpool to Limerick at a through rate of 15*s.* per ton.	The 15*s.* was a competitive and unremunerative rate.
2412. (*Mr. Dalglish.*) What class of goods do you refer to?—Heavy goods, iron, tallow, palm oil, sugar, and such heavy goods; and within the last two or three years they advanced the rates to 27*s.* and 30*s.* a ton, something equal to from 80 to 100 per cent., and we consider that that has done very considerable injury to the trade of our locality.	This is an extreme instance quoted out of a general re-arrangement of rates.
2413. (*Chairman.*) Are you able to state that the traffic of that description has fallen off since the raising of the charges?—It has.	Our traffic superintendent reports that such is not the fact.
2434. Do you propose that the rates should be adjusted with a view to placing a more distant port on the same footing as a port nearer to the place of production?—The increase in the charge by the railway company to 27*s.* has been attended with this disadvantage as regards Limerick, that it has compelled our local companies, or it has induced them, to advance their rates to 20*s.*, whilst goods of the same class are imported into Dublin, Cork, and Waterford at 10*s.* or 15*s.*	The question of equal rates for competitive traffic is a very difficult matter for companies to arrange to satisfaction of rival ports. What tends to procure most traffic, and augment the company's income, is the policy pursued; and when traffic cannot be obtained at fair rates a lower tariff must be sometimes fixed of necessity.
2435. If the increase of the rate does not interfere with the consumption of the articles, the reduction would simply have the effect of making you a present of so much per ton to enable you to carry on your business in competition with the merchants of Waterford and Dublin?—We should have equal rates with them.	This question gives a significant reply to the previous answer. Limerick, being situated on the western coast of Ireland, is 77 miles more distant from Liverpool than Waterford, on the south-eastern coast.
2436. But it would in effect be asking the railway companies to give you a sort of bounty or present to enable you to compete with the merchants of Waterford and Dublin?—Not to make it a present. The fact is, the goods now do not come by the railways; in fact, the rate is a prohibitory rate, for since they advanced it to 27*s.* the goods have scarcely come by the railways at all.	
2531. At what price could you get coals delivered in Limerick through Waterford?—I will give it you to Tipperary, that is within 22½ miles of Limerick and 55 miles from Waterford.	The distance from Limerick to Tipperary is 25 miles (not 22, as appears in evidence); and bonding expenses reasonably influence a higher rate for shorter distances.
2532. At what price is the coal sold in Tipperary?—I will give you the rate of charge first to Tipperary. The rate to Tipperary is 4*s.* 9*d.* per ton from Waterford. I believe the distance is 55 miles. Then from Limerick to Tipperary I find they charge 3*s.* 3*d.* a ton, and the distance is 22½ miles, and that is a very great disadvantage to Limerick in sending coals into the interior.	
2533. Has the railway company ever been remonstrated with with respect to that disadvantage?—Yes, I have remonstrated with them, and as to another article in which I deal largely, salt, they did advance the rate, and then they reduced it again.	For reason *see* last answer.
2534. What is the rate at the present time?—At the present time it is 4*s.* 9*d.* to Tipperary, and 3*s.* 3*d.* from Limerick to Tipperary; that is, for a distance of 55 miles they charge, as I said, 4*s.* 9*d.*, and for 22½ miles they charge 3*s.* 3*d.*, which gives a great advantage to Waterford over Limerick.	*See* answer 2532.
2655. Will you be good enough to state what opinion you have formed as to the effect of the present passenger rates?—I think that they have prevented a great deal of traffic which would otherwise have taken place. The people are very poor, and they have not got much money to pay for railway transit, and I think that if third-class trains were placed more within the reach and circumstances of the people they would be more available; but there is another matter which I think operates upon the traffic as much as the high prices—the want of a better arrangement as to keeping time between our principal lines of railway and the tributary ones. We have six lines of railway coming into Limerick, and by some extraordinary arrangement they do not at all keep time for the third-class passengers.	At the time this evidence was given, and for years previously, the Great Southern and Western Railway Company ran their third-class train to Dublin at so early an hour as to render it incumbent on the Waterford and Limerick Company to start their train as early as 7.30 a.m., thus precluding the railways converging in Limerick (having regard to their local traffic) from running their trains to correspond therewith. However, an alteration of the Great Southern and Western trains to a later hour has subsequently enabled the local lines to get their trains into Limerick before the departure of the 9.25 a.m. third-class train to Dublin.
2656. Do you mean that they do not keep the time as published in their time tables?—No; they keep that time, but they do not hit off the trains which arrive; that is to say they do not correspond. There is only one third-class train in the course of a day out of Limerick to Dublin; it leaves at 7.30 a.m., and there are no other means or opportunity for third-class passengers to travel until the following morning; and all the country trains, those five or six trains of which I have spoken, arrive in Limerick after the departure of that train, and the passengers have consequently to remain at Limerick all that time and during the night, in order to get off the following morning. If I may be allowed I will quote from a few memoranda which I have put down in writing upon this subject. What I am about to state will show the inconvenience and delay to the public, the result of the present railway system, particularly arising from small local companies. There are in connexion with the city of Limerick no less than six railway companies, namely, the	As to Sunday trains, they were discontinued simply because the receipts therefrom did not leave a profit. (*See* Parliamentary return.) During the past summer excursion trains have been regularly run on the Waterford and Limerick, Waterford and Kilkenny, and Limerick and Castleconnell lines. (*See* time-table annexed, pages 20 to 24.)

No. 8.—Waterford and Limerick Railway—*continued.*

Extracts of Evidence sent to the Company.	*Replies received.*
Great Southern and Western, the Waterford and Limerick, the Cork and Limerick direct, Limerick and Foynes, Limerick and Ennis, and the Limerick, Castleconnell, and Killaloe. The passenger traffic between Limerick and Dublin is carried on by the Waterford and Limerick and the Great Southern and Western *viâ* the Limerick junction, also by the Limerick, Castleconnell, and Killaloe, and Great Southern and Western *viâ* Nenagh, and Roscrea and Parsonstown junction *viâ* Limerick junction. There is only one third-class passenger train from Limerick to Dublin by this route. This train leaves Limerick at 7.30 a.m., and arrives at the Limerick junction at 8.35 a.m. Passengers, &c. are here detained until 10.44, over two hours, and then proceed by the train on the Great Southern and Western line by the train which left Cork at 8 a.m. This train arrives in Dublin at 3.35, whereby passengers, &c. going from Limerick to Dublin, a distance of 129 miles, are detained over eight hours on the road. This journey in the old coach times was performed in 12 hours. The next train for Dublin by this route is a mail train which carries the principal English mails, leaving Limerick at 11 a.m., and arriving at the Limerick junction at 12 at noon; passengers and mails are here detained until 1.57 p.m., nearly two hours. This train arrives in Dublin at 5.35. If this train did not start from Limerick until 12.40 p.m. it would give the citizens of Limerick 1 hour and 40 minutes additional time to answer English letters received in the morning, and would also be a great convenience to passengers. There is no train from Limerick to Dublin on Sundays except the mail train at 10.45 p.m. In fact there is no train into or out of Limerick on Sundays except the night mail train, and an excursion train to Cork and Killaloe *viâ* Nenagh and Roscrea. There is no third-class train by this route. The first train by this route leaves Limerick at 10.15 a.m., and arrives in Nenagh at 11.30. Passengers are detained in Nenagh until 2.0 p.m., two hours and a half, and arrive in Dublin at 5.35 p.m. 7 hours and 20 minutes on the road; whereas if this line was in the hands of one company, or the Government, the journey could be easily performed under five hours. The second train by this route leaves Limerick at 2.0 p.m., and arrives in Nenagh at 3.15 p.m.; again passengers are delayed until 5.15 p.m., two hours, and arrive in Dublin at 9.30, seven hours and a half on the road. This line of railway is about five miles shorter than the one *viâ* Limerick junction, the distance by this route being 124, by Limerick junction 129. This route from Limerick to Dublin clearly exemplifies the evil of allowing railways to remain in the hands of rival and short companies. This railway is handed by lease from the Limerick, Castleconnell, and Killaloe to the Limerick and Waterford Company as far as Birdhill, 14 miles, and of course the Waterford and Limerick Company throw every impediment in the way of passengers, &c., proceeding by this line, in order that they should go by the Limerick junction on their own line. The Great Southern and Western own this line from Dublin to Birdhill, 110 miles, the Limerick, Castleconnell, and Killaloe from Birdhill to Limerick, 14 miles. Passengers can leave Nenagh, an unimportant town and only a few miles from Limerick, at 6.40 a.m., arrive in Dublin at 11.0 a.m., leave Dublin at 4.0 p.m., and arrive at their homes at 8.30 p.m. This line being in the hands of one company the public at Nenagh have the advantage of leaving their homes in the morning, have five hours to transact their business in Dublin, and can return same evening to their homes; and if the entire of this line was in the hands of one company or the Government the Limerick public would have the same advantage as Nenagh. The first train from Limerick arrives in Dublin at 3.35 p.m.; the last that leaves Dublin for Limerick is at 1.0 p.m. From the present railway system, so far as Limerick is concerned, the several companies connected with Limerick seem to throw every obstacle in the way of the public and put them to every possible inconvenience, and it is no great wonder their receipts should be so low. The Waterford and Limerick Company paid no dividend for many years; the last was about one per cent. The Limerick and Foynes, Limerick and Ennis, and the Limerick, Castleconnell, and Killaloe have paid no dividend since opened. The Government should by all means purchase up all railways, but more particularly small and non-paying ones, as they are great obstacles to large and extensive undertakings by running their trains at such times as are most inconvenient to them.	*See* above.
2659. Has the traffic between Limerick and Dublin diminished in consequence of that delay?—I should certainly think so, because persons who would otherwise go to Dublin more frequently do not wish to remain for a space of two hours in one of the most unpleasant places imaginable—the Limerick junction.	This delay does not now exist.
2662. Do you think there would be a large third-class traffic between Limerick and Dublin?—Yes, not of the labouring class, but certainly of the shopkeeping class or the trading class. They obtain their supplies both from Dublin and from Cork, and they cannot travel to either of those places third-class and return on the same day.	Matter of opinion.
2663. Not from Limerick to Cork and back on the same day?—I think not. I know that to Dublin they cannot do so. We had very great hopes when the Great Southern and Western Company were permitted to extend their line from Roscrea to Limerick, and they promised at that time to give us great facilities, to have a continuation of their line to Dublin, and that would have given us the same facility which they formerly gave us when a train started at 6 o'clock from Limerick, leaving Dublin at 4 o'clock again, so that the Limerick people had time to transact their business in Dublin and return to Limerick.	This experiment tried, and found not to answer. The train having to leave Limerick so early as 5.45 a.m. was only availed of by a few people, and local traffic requirements were interfered with. By the present service, a third-class passenger can leave Ennis at 7.45 a.m., and reach Dublin, after having travelled 154 miles, at 3.35 p.m. He can return from Dublin at 7.0 a.m. on the following morning, reaching Ennis at 2.30 p.m.

No. 8.—Waterford and Limerick Railway—*continued.*

Extracts of Evidence sent to the Company.	*Replies received.*
2669. Did they issue return tickets for third-class passengers?—No, they charged full fares for them.	Neither Great Southern and Western Company, nor Waterford and Limerick Company, issues third-class return tickets.
2670. (*Mr. Ayrton.*) What class of persons travelled by that train?—The persons, I think, were cattle dealers, and even poor shopkeepers—country shopkeepers—persons not in very good circumstances, who went to Dublin and selected their articles and then came back again. By the present arrangements a shopkeeper in Ennis, which is the capital of the county of Clare, and a very important town, as a third-class passenger, requires, in order to give him one day in Dublin to transact his business, four days to accomplish his journey.	*See* reply to No. 2663, explaining alteration in train service.
2671. (*Capt. Galton.*) How do you make that out?—In this way; a third-class passenger must leave Ennis at 3 o'clock in the afternoon, that is, by the third-class train from Ennis, and remain in Limerick, which is distant only 25 miles, all night, and then proceed by the morning train to Dublin, which arrives at 3·35.	*See* 2663.
2672. At what time does the morning train leave?—At half-past 7; there is no train from Clare.	*See* 2663.
2673. That train does not correspond at the junction with another train?—No; and it waits at the Limerick junction for the train from Cork, which leaves Cork at 8 o'clock. The passenger must come the night before to Limerick, there being no train from Clare, and the passenger is 24 hours on the road, the distance being 154 miles by this arrangement. It takes the same time to return, as to go from Ennis to Dublin, and transact one's business. In the old coach times the journey would have been accomplished in the same time.	
2674. This of course very much limits the third-class traffic between the district you have referred to and Dublin?—It entirely precludes it.	
2675. (*Mr. Ayrton.*) Is there no afternoon train from Limerick to Ennis?—Yes, but it goes at a most inconvenient hour. It leaves before the arrival of the other local trains.	
2678. Every impediment seems to be thrown in the way of third-class travellers?—I think so.	Not the fact.
2685. (*Chairman.*) Do you wish to state any facts as to passenger fares on any other lines besides those between Limerick and Dublin?—I can state in general terms that the railways about Limerick are not doing the work of the country; carriers are still numerous on all the roads where railways are. I must state that we have not much experience on the subject; it has not been tested. The public think, from what the traffic managers tell them, that things are as low as they can go to pay, and those who are inexperienced in railways take that as the state of circumstances, and they have not pressed the matter; but my own impression is that when one sees the traffic of our own country "*all going by road*" by a route running parallel with railways, that the cattle are driven long distances, having been bought in the west of Limerick and Clare, and going up through Dublin on to Meath, where they are fattened—it strikes me that that being our principal traffic, as we have not got any manufactories, the attention of railway directors ought to be called to the matter to see how they could manage to get that traffic on to their lines; they say that it will not pay them to carry them under a certain rate, but the railway waggons go empty, and there is no prospect of filling them, when, if they even tried the experiment of taking them at a very considerable reduction, such a reduction as would pay the breeder of the cattle to rear them, I think that it would pay the railway companies something.	Not the fact, for if all the traffic were conveyed by road, as appears in the evidence of this witness, the Waterford and Limerick Railway would be really carrying nothing. With respect to store cattle, it is well known that the dealers prefer driving by road for short distances, however low the railway rate may be; and we presume this witness is speaking of the short lines around Limerick.
2691. (*Mr. Hamilton.*) Is it not the fact that the present high fares have compelled many persons to walk who would otherwise travel by the railway train?—There is no doubt of it, and in my own district. I am a shareholder in the Limerick and Foynes Railway; it has never paid one shilling dividend, and I do not expect that it ever will. The line runs parallel to the road leading to Askeaton and all that district; but the people never think of going by the railway, although the distance is very little more, if anything, than by the main road; the railway and the road are nearly parallel lines.	Facts disprove the testimony of this witness, as we find that in the year 1864 there actually travelled from Askeaton to Limerick, 54 first class, 125 second class, and 705 third-class passengers.
2692. (*Capt. Galton.*) I believe the fares are very low on that railway?—They have advanced them recently, but this is an instance of the effect; in April 1863 a considerable increase was made in the passenger charges of 10 or 12 per cent.; in the year previous to the change the number of passengers was 87,000, and in the year after the change the numbers fell to 63,000, showing a falling off of 24,000. So likewise there was a similar falling off in the traffic of the "Kelpy" steamer, working in connexion with the Foynes line, in which there was a similar raising of the fares, the falling off of passengers being from 15,000, making a receipt of 17,000*l.*, to 8,300, bringing 9,060*l.* That was the effect of increasing the rate.	It is necessary to bring under notice for consideration of these answers that there is a direct steamer running between Limerick and Kilrush, carrying third-class passengers the entire distance for 1*s.* each; a rate of charge obviously not remunerative for a railway to carry 26 miles, and steamer, in connexion, 20 miles, and this opposition cheap service, it is submitted, accounts for the diminished numbers using the quicker route.
2717. What is the object of that?—The fact is, that the chairman of the company is also the proprietor of the steamships going out of Waterford, and of course by getting the trade to Waterford the vessels earn freights which they would not earn if the trade came, and probably to a better market, in Limerick.	
2718. You think that in order to drive the traffic into Waterford he actually allows the passengers to travel for nothing if they bring their firkins of butter with them?—Yes, he allows them to travel for nothing to Tipperary, which is nearer to Limerick than to Waterford.	Not the fact. No passengers allowed to travel free.

No. 8.—Waterford and Limerick Railway—*continued.*

Extracts of Evidence sent to the Company.	*Replies received.*
2757. It is more than 2*d.* per ton per mile, and do you say that that is not an exceptional rate for the carriage of turf over Irish railways?—I am not aware that it is, it was lower some months since, probably some five or six months since; there was a large quantity of turf coming into Bruree; since that time it has been advanced, and a gentleman informs me by a letter I have received this morning, what I know to be the fact. He says, "The charge for a box of turf to Bruree had been "18*s.* 6*d.*, and it is now 1*l.* 7*s.* 9*d.*; great complaints are made of the "want of fuel, and particularly among the dairy farmers, who were in "the habit of getting turf at Bruree. You must know that the poor "people must feel it also."	This refers to the Cork and Limerick line, worked by the Great Southern and Western Company.
2759. Is it for the interest of the Great Southern and Western to carry coal rather than turf?—I do not know, indeed, but it is the interest of the steamboat proprietors to carry it, and there is a very large amount of steamboat influence exercised in the directory of this company, and it is the interest of the large steamboat proprietors to get freights for their ships, to the exclusion of our own fuel.	For Great Southern and Western Company's reply.
2760. (*Capt. Galton.*) The charge for the coal is a halfpenny per ton per mile, and the charge for turf is about 2*d.* and one-fifth per ton per mile; it used to be 1½*d.* per ton per mile?—Yes.	
2769. (*Chairman.*) Have you given much consideration to the question whether any great alteration could be introduced into the railway system in Ireland with advantage?—I have always considered that if we could have all our railways placed under one management the interests of particular towns and particular districts would not be interfered with from any interested motives, particularly as we are circumstanced on the west coast of Ireland; we have no directors there, the railways that run to Limerick are centred either in Waterford, Cork, or Dublin, and the eastern ports of shipment, and I think that those three directors vie with each other to see which port shall get the greatest loading for their steamers, and the port of Limerick does not get a fair mileage rate in consequence of that. As an instance, butter, per firkin, Bruree to Cork, 41½ miles, is 5*d.* per firkin, while from Bruree to Limerick, 19 miles, it is 9*d.*, being double the distance for half the price; that is, the charge to Limerick is fourfold in proportion to that of Cork. Again, timber from Cork to Bruree is charged 6*s.* 3*d.* per ton, while from Limerick to Bruree it is 4*s.* per ton. The proportionate charge, according to mileage, ought to be 2*s.* 10*d.* from Limerick.	For Great Southern and Western Company's reply.
2770. (*Lord Donoughmore.*) Is it not the fact that Sir David Roche was for many years a director of the Great Southern and Western Railway?—Yes.	For Great Southern and Western Company's reply.
2851. (*Lord Donoughmore.*) Have the earnings of the Waterford and Limerick Company, since that offer was made and declined, been at all equal to the terms offered by the Great Southern and Western Company?—No; neither since that time nor before it, but whenever a negotiation is pending the public necessarily know it, and that raises the price of the line that is to be bought, and then the shareholders think that that rise in price is part of the intrinsic value of the line, and they insist upon something more, and all these things cause delay.	
2914. (*Mr. Ayrton.*) Has it come under your notice that the traffic from Tipperary to Waterford, and from Tipperary to Limerick, is regulated by other considerations than those of the distance?—Yes; it is very well known that the most influential proprietor in the Waterford and Limerick Company has a very considerable interest in the port of Waterford, and that he does his best to develope the traffic to Waterford.	
2915. Has that been a source of embarrassment to your company in making traffic arrangements to go from one line on to the other?—That has been our opinion, but whether just or not I cannot say.	
3357. (*Chairman.*) Have you any suggestion to make as to the remedies which you think ought to be applied with respect to the deficiences on the Irish railways, both as to the passenger and goods traffic?—As to the passenger traffic we labour, no doubt, under a great many difficulties in the way of getting from place to place in consequence of the trains not running in connexion with one another; for example, if you want to come from the west to the south you have a delay at Athlone probably of one or two hours; you also have a delay at Portarlington of one or two hours before you can catch the train on the Great Southern and Western line. Then if you want to go to Belfast you must remain for four hours at Portadown before you can get a train to go on. And in the same way, if you want to come from Limerick to Dublin you are obliged to stop at the Limerick station, which is a very bad station, for two hours or two hours and a half before you can get on to Dublin; and there is no accommodation whatever at the Limerick Junction, that is in consequence of the Waterford and Limerick Railway and the Great Southern and Western Railway not running in connexion with each other.	*See* previous replies.
3358. Can you make any suggestion to the Commission as to how these inconveniences can be remedied?—No, I can hardly do so, except that I think the public are suffering by not being able to carry one through continuous route from place to place in consequence of all these opposing interests on the part of the Waterford and Limerick Company, the Great Southern and Western Company, and the Northern lines, for they are all running, as it were, almost antagonistically to one another, and not suiting each other in any way. If these opposing interests were united in some way it is clear that the public would be very much benefited by it, not alone with regard to facilities being	

No. 8.—Waterford and Limerick Railway—*continued.*

Extracts of Evidence sent to the Company.

Replies received.

afforded, but probably the necessary expenditure would be very much reduced.

3359. (*Mr. Ayrton.*) In your opinion is the third-class accommodation sufficient in Ireland?—No, it is very bad in Ireland. A third-class passenger, for instance, on the Great Southern and Western line cannot go to Limerick in a third-class carriage, he must stop at the junction and must book second-class. Then again, a third-class passenger, if he wants to come to Dublin to attend the market, must start early in the morning, although he cannot get back at night, and he does not come up in time for his market in Dublin, but he must remain there till the next day, and then he can get no train back the next day, he must remain there until the third morning, so that in point of fact he pays more than a first-class passenger in consequence of the delays which take place. The number of the third-class passengers is most enormous compared with the first-class; they are four times as many as the first-class passengers in Ireland.

2771. If he had any local interest it was in Limerick, was it not?—Yes, but he never shipped any produce from Limerick; he had a large flour mill in Limerick, but he never exported. I am glad that you referred to Sir David Roche, he has recently died, but his son, the present Sir David Roche, is now the owner of the very large mills there, and I am satisfied that there are very few men in the country who could give more information to this Commission as to the inconvenience which is suffered from the present state of things than the present Sir David Roche. I have known him complain very sadly with respect to his mills; he has one at Croome, and he does not use the railways at all; he keeps a stud of horses on the road, and he does not send a pound weight by the railways.

For Great Southern and Western Company's reply.

2772. (*Capt. Galton.*) On account of the high rates which are charged?—I suppose so.

2792. (*Chairman.*) Can you give any other instances of cars competing successfully with railways?—I believe there are other instances, but those I have given are the most familiar to me. I witnessed the other day a very curious thing; some people were coming from Kilrush to the other side of the Shannon; there were about 70 emigrants going to Cork and Dublin, and coming from the west of Clare by Foynes; they arrived in the afternoon at Limerick, and those 70 persons had to remain in Limerick all night, there being no third-class train after that time to take them on to their place of embarkation. Some were going to Cork to embark by steamer for America, and others were going to Liverpool *viâ* Dublin. There was no means to convey them, and it was most pitiable to see those poor people disappointed in that way, being of course put to very great expense.

For Great Southern and Western or Cork and Limerick Company's reply.

2842. (*Mr. Glyn.*) It has been stated that there is no possibility for a first-class passenger to get from Limerick to Dublin and back again conveniently in the same day; is that so?—I cannot say; but looking at the time table I think it is not improbable, and I think it is likely they would not much care for the privilege, for there is some little disadvantage in consequence of it, for in going from Limerick to Dublin they have to pass over two lines of railway not belonging to the same company, and which are not always working harmoniously.

A first or second-class passenger can leave Limerick any week-day at 9.25 a.m., reach Dublin at 3.35 p.m., and return same evening at 7.45 p.m., arriving back in Limerick at 1.20 a.m.; thus he is only 15 hours absent on a journey of 258 miles, and has four hours to spare in Dublin.

2483. (*Mr. Ayrton.*) Are they at present in harmony, or is there much discord between them?—Not so much harmony as I should wish.

Amicable working relations continue to exist.

2844. Have you any joint committee to manage the traffic that is required to be worked through?—No.

2845. (*Lord Donoughmore.*) Was there not some time ago a proposition made on the part of your board of directors to amalgamate with the Waterford and Limerick Railway Company?—Yes.

2846. And that proposition was refused by the directors of the Waterford and Limerick line?—By the shareholders. I do not know whether the directors were favourable to it or not, but it was refused.

2847. Do you believe it would be a great advantage to the public if those two railway companies could be amalgamated?—Certainly.

2848. Would it facilitate the traffic arrangements all through that country?—Yes.

2849. (*Chairman.*) You could not offer terms to the Waterford and Limerick Company that they would accept?—No; and with regard to the terms that were then rejected, I thought they were a great deal too high, and I opposed them.

2850. (*Mr. Gower.*) The negotiation failed as to the terms?—Yes. We offered what I considered were too high terms, and they thought that they would be better by standing out for a time.

3710. (*Mr. Ayrton.*) Can you give us any other instances?—I have been told by a trader in cattle, in Waterford, that he walks them from Clonmel and Caher for less than half the charge by the train; and a dealer in them at Cork, who sends over here largely, has told me that if there was a third taken off, he would never send a cow along the road; and have also been told by an extensive grazier in Clare, that he would send at reasonable rates a thousand sheep to Dublin annually, which now he sends to Ballinasloe to sell; others in his locality do the same for identical reasons.

Give authorities, and assertion can be dealt with.

5011. Have you any statement to make with reference to the railway traffic of the south of Ireland?—The statement that I wish to make is this, that as far as Waterford is concerned, being the place I am connected with, there is a great difficulty in approaching the interior of Ireland from the want of railway communication, and there is even great diffi-

No subsidy exists. *See* Traffic Arrangement before Commission, which provides for division of receipts and equality of charge between the competitive routes. Some such arrangement has been for years in force.

No. 8.—Waterford and Limerick Railway—*continued.*

Extracts of Evidence sent to the Company. *Replies received.*

culty in approaching Dublin, from the indisposition of the Great Southern and Western Railway Company to work in harmony with the Waterford and Kilkenny, so as to give trains that will conduce to the public convenience. I also wish to state that the public of the south of Ireland are, in my opinion, very much injured by the determination of the Great Southern and Western in connexion with the London and North-western to subsidize the local lines and steam packet companies to allow the traffic to be brought to England *viâ* Dublin. They pay 30 per cent. for that, and such diversion of traffic, in my opinion, not only is injurious to the southern cross channel communications, but very injurious to the public in the several localities.

5019. (*Mr. Glyn.*) That is the through train of the Great Southern and Western?—It is the through train from Kilkenny; that is their Kilkenny line through train.

5020. It is their through train on the main line?—It is not a through train from Waterford.

5021. What train do you wish to join on the Great Southern and Western?—We want a train that will allow parties to leave Waterford at 6 o'clock in the morning and arrive at Dublin in proper time for business, and then enable the parties to leave at 4 or 5 o'clock p.m., so as to arrive in Waterford at 10 o'clock at night.

5022. Do you wish them to put on particular trains to accommodate you?—I wish to alter the hour of the trains which they do run.

5023. The trains, you say, that do run now are their trains to other parts of their system?—No; they are trains which no other part of their system is connected with; they run from Kilkenny to Dublin, and *vice versâ*, without reference to any other train.

5024. (*Capt. Galton.*) Does the train which runs from Dublin to Kilkenny run as far as Kildare Junction with the train going to Cork?—No.

5025. (*Mr. Glyn.*) Then they start from Dublin a particular train for their service which does not suit the public?—It does not, although we would make ours suit theirs if they started at an hour the public could travel at. If we ran trains now in connexion with theirs, parties would have to start from Waterford between 4 and 5 o'clock in the morning, and could not get back till 11 at night.

5026. (*Mr. Hamilton.*) Does that line belong to the same company as the line from Limerick to Waterford?—No.

5027. Is Mr. Malcolmson a director of your line?—He is; but it does not belong to the Limerick Company. The Waterford and Limerick Company work the Waterford and Kilkenny, but it is only under working arrangements; they have no interest in it more than that. The Great Southern and Western have always set their faces against any sort of effort being made to the northern and midland districts of Ireland with Waterford. In 1846 a bill was obtained to make a line from Kilkenny to Maryborough, and I understand that the Great Southern and Western people at that time bought up the shares in order that the line might fall through. With much difficulty, in 1860, a similar bill was brought in, which the Great Southern and Western opposed most violently, but it was obtained in spite of their opposition. A portion of that line is now made; it has served the traffic of the district to this extent, that for eight weeks, ending 19th May 1865, the traffic of the line from Kilkenny to Waterford has increased over and above the traffic of last year 33 per cent.

5028. The traffic between what points?—Between Kilkenny and Waterford.

5033. (*Mr. Glyn.*) Is not Mr. Malcolmson a great steam-packet owner in Waterford?—He is.

This refers to the agreement before Commission.

5034. He did not say anything about this in his evidence?—I do not know what he has said in his evidence, but this I know, that the London and North-western Railway Company and the Great Southern and Western Railway Company have lately entered into an arrangement with him, by which the railway and steamboat interests are served to the prejudice of the locality. There has been an arrangement entered into, which was before the citizens of Waterford, and which was condemned by all parties, the effect of which is, that the traffic of the district will be brought to England by Dublin, *viâ* Liverpool and Holyhead, and that Mr. Malcolmson for the steamers and the Limerick Railway Company will get 30 per cent. of the traffic thus brought to Dublin to allow it to go by Dublin.

5035. (*Mr. Hamilton.*) When you say that "they" get, who do you mean gets the 30 per cent.?—The Limerick Railway to Waterford and the Waterford Steam Packet Company.

5036. Who makes the arrangement?—The North-western and the Great Southern and Western. I have the heads of arrangement which I can hand in if the Commission wish (*the witness handed in the same, vide Appendix* AL). One of the heads, which struck me very much as most injurious to the southern routes, is this:—

See agreement.

"Waterford and Limerick Railway Company, Cork and Limerick "Direct Railway Company" (being another railway company that is subsidized) "undertake that all traffic consigned to them by other "routes than *viâ* Liverpool and Holyhead, between places in England "and the places in Ireland to which this agreement refers, shall not "be booked through, and shall be charged the local rates."

No. 8.—Waterford and Limerick Railway—*continued.*

Extracts of Evidence sent to the Company.

No through traffic from the districts to which the agreement applies can, under that arrangement at all, come by the Great Western or English Midland systems to England; it must all go by the London and North-western. In that way the traffic of the country is interfered with, and interfered with so as to inflict an immense loss on the localities; and when the North-western and the Great Southern and Western are paying 30 per cent. on all goods for the purpose of making them go in a particular way, they are sure to repay themselves by putting on increased rates.

5037. (*Mr. Glyn.*) In what shape is that 30 per cent. paid; is it by a reduction of rates, or what?—It is 30 per cent. of the monies received for traffic which is allowed to go by Dublin.

5038. Is it in the shape of rates, or tolls, or what?—It is in the shape of money or direct payment; it is in the shape of a direct subsidy. Suppose 100 tons of goods are to be sent from Limerick or Tipperary to Birmingham for which 100*l.* is paid for the transmission, although the Waterford and Limerick Company will not carry one pound of it, and although the Waterford Steamship Company will not carry one pound of it, they will get 30*l.* out of it in order to allow it to go by Dublin, so that the company who actually carry it will only get 70*l.*

5039. (*Capt. Galton.*) The company who carry it giving to the other companies a bonus of 30 per cent.?—Yes, although they do nothing to earn it.

5041. Then I understand your statement to be this, that the Great Southern and Western Railway Company, being interested in the traffic of Dublin, has made some arrangement with the North-western Company to secure all the traffic of that part of Ireland going by way of Holyhead?—Yes.

5042. And in order to secure this they have made some arrangement with the Limerick and Waterford Company and with Mr. Malcolmson's steamers, so as to provide that no part of that traffic shall be diverted by way of Waterford into South Wales?—They have made this arrangement, that upon all goods brought through Dublin to the North-western system in England at Liverpool or Holyhead, and consigned to Birmingham, and places north of Birmingham, that 30 per cent. off the receipts will be paid to the Waterford companies to allow it to go that way.

5043. That has the effect of diverting the traffic from Waterford to Dublin into South Wales?—It has the effect of diverting the traffic of the district to England from Waterford to Dublin, and thence *viâ* Liverpool and Holyhead, and in fact injuring the communication between the southern parts of Ireland and England.

5044. How does it affect the southern parts of Ireland?—Because the traffic that originally belonged to Waterford, and would come to Waterford, is diverted the other way.

5045. It goes north by Dublin?—Yes. In Dublin they have communications two and three times a day with Liverpool and Holyhead, but between Waterford and Liverpool the steam ships only sail twice a week, therefore people who have produce to send will naturally, when they pay equal rates, send all their goods by Dublin, and none will come by way of Waterford. Therefore the diversion of traffic will injure communications between Waterford and England, as the number of steamers will be lessened when they must depend upon the local traffic alone.

5046. This arises from a sort of understanding between the London and North-western Railway Company, the Great Southern and Western of Ireland, the Limerick and Waterford, and Mr. Malcolmson, the owner of the Steam Company?—And also the Cork Steam Shipping Company.

5047. What remedy do you propose for that?—As I said before, there should be some tribunal, such as the Board of Trade, to prevent railways using what I may call a very illegitimate mode of dealing with a public matter, and to forbid them doing such things as would prevent the traffic from flowing in the channel through which it would naturally flow, and not to allow any large company to subsidize a small one to the prejudice of the public interests.

5051. There is nothing illegal in this arrangement?—No, I am not aware that there is anything illegal; but although it may not be illegal, it is highly detrimental.

5052. (*Capt. Galton.*) You think, although not illegal, it is exceedingly injurious to the public interests that such an arrangement should be made?—Yes, and the public have decided so. Here is a resolution which was adopted with reference to it: "That this committee, with all "respect for the opinions of the directors, considers these arrangements "to be well calculated to divert the traffic of the districts to England "*viâ* Dublin, and vitally injure the trade and commerce of Waterford "and the southern communications." That resolution was adopted at a meeting of a committee appointed by the merchant traders and citizens of Waterford, the mayor of Waterford being in the chair.

5109. Minerals are not included?—We have not been asked for rates for minerals. Then by the Waterford and Limerick Company's line we have a few rates for passengers, not many, and goods rates from Limerick and Tipperary only; but those are limited to Birmingham, and places north of Birmingham. For a few weeks we had goods rates with them

Replies received.

See agreement.

By the agreement the company carrying the traffic receives 40 per cent. of the full rate. The balance is divided, half to Dublin route, half to Waterford route; and it is the interest of the companies forming either route to obtain the greatest amount of traffic. No traffic is allowed to go by Dublin which can possibly be sent *viâ* Waterford, the object being to secure the 40 per cent. for working; and as a proof of this, the Waterford route, although the longest, and with only alternate sailings, has obtained the largest amount of traffic.

If they can get it. *See* previous replies.

The traffic between the south of Ireland, South Wales, and all places south of Birmingham, is provided for by a daily communication by mail boats *viâ* Waterford, and is not affected by the aforesaid agreement, except by the reservation for places south of Birmingham, which is in favour of Waterford.

No. 8.—Waterford and Limerick Railway—*continued.*

Extracts of Evidence sent to the Company. *Replies received.*

to London, but they withdrew them, and we have never been able to get them to renew them since.

5110. (*Capt. Galton.*) What was their reason for withdrawing them? —That I do not know. I believe that line pays no dividend; it would appear to be worked entirely in the interest of the steam-packet proprietors. The Waterford and Limerick Company work the Limerick and Ennis, and the Limerick and Foynes railways, and, I think, the Waterford and Kilkenny line. We have no through rates with any of those.

I have prepared a short tabular statement showing the charges on articles in large daily consumption, and which in my opinion are excessive.

This tabular statement is merely intended to show that the charges for conveying many articles of commerce is excessive, and in most cases considerably in excess of freights from any English port, in some cases double, thereby precluding the possibility of trading, owing to the high rates.

Appendix AY.

Letter from Mr. Dargan on Irish Railways.

Sir, Dublin, 6th November 1865.

Since my examination before the Royal Commission on Railways in June last, I have very carefully considered and studied the entire subject of Irish railways, and being much interested in this class of undertaking, as well as in the general prosperity of Ireland, I venture to state very briefly the course that in my opinion would be productive of most benefit as well to this country generally as to the proprietors of its railways in particular.

I think, then, that the taxation of railway property in Ireland is excessive, and ought to be reduced either by altering the basis upon which the valuation of such property is made out, or by adopting a different kind of assessment with respect to railways from what is applied in other cases.

In order to show the unfairness of the mode in which taxation is imposed, it is only necessary to point out that while a railway relieves the traffic upon a county road, and consequently reduces the expense of keeping such road in repair, the same railway is charged with county cess in proportion to its excess of receipts over working expenditure; and while a railway, by giving and creating employment, diminishes pauperism in a poor law union, it is obliged, nevertheless, to contribute to poor rates in the same proportion.

I am of opinion that the Government should advance to the Irish railway companies a sum of, say 6,000,000*l.*, at the rate of 2,000,000*l.* annually for three years, at 3½ per cent., to enable them to pay off money at present borrowed from private sources at higher rates of interest.

In consideration of the reduction in working expenditure which would be effected by the foregoing means and in proportion to its amount, I think the railway companies should reduce their rates of charge in respect of third-class passengers and of the lower and less valuable classes of goods, cattle, &c.

The advantage to Ireland generally would not only consist directly in the benefit of cheap travelling and cheap transport of goods, but inasmuch as the money borrowed by Irish railways is almost exclusively Irish money, the paying off of so large a sum as 6,000,000*l.* would induce or compel its being applied to purposes that could not fail to develop many industrial operations that now lie dormant for want of capital to set them in motion.

I am convinced that beyond what I have suggested nothing is necessary to be done for Irish railways, but that they may be safely left to work out their own mission.

I adhere to the opinion I expressed in the course of my evidence before the Royal Commissioners, that an amalgamation of Irish railways under one general management would lead to a large saving in working expenses, but as in my judgment this ought not to be compulsory, and would take a considerable time and cost some 22,000,000*l.* to effect, I think the course I have suggested would be most expedient and most easy of accomplishment.

I should wish particularly to impress upon the Royal Commissioners the desirability of existing railway projects in Ireland being allowed to establish themselves before any new schemes shall be authorized; or at any rate that promoters of new undertakings should be obliged to give very satisfactory proof both of their *bona fides* and of their financial ability to carry out what they undertake.

I am, &c.
(Signed) Wm. Dargan.

W. Pole, Esq.,
Secretary, Royal Commission on Railways,
House of Lords, Westminster.

APPENDIX BC.

EXPLANATION from MR. FISHBOURNE.

(Extracts of questions and answers Nos. 1824 to 1828, and 4563 to 4572, were sent to Mr. Fishbourne, and the following is the essential part of his reply.)

London and North-western Railway Company,
via Holyhead, I. Fishbourne, Agent.
SIR, Bachelor's Walk, Dublin, 1st July 1865.

I HAVE the honour to acknowledge the receipt of your letter of the 1st inst. this day on my return home from the continent, enclosing me extracts from the evidence given by Messrs. Haughton, Murland, and Forbes, before the Royal Railway Commission; the evidence of the latter gentleman, reflecting on my conduct as a railway agent in this city, contains statements which I beg to give the most unqualified contradiction, and I challenge Mr. Forbes to produce one single case.

* * * * * *

My rates for cartage as arranged by agreement are distinct from the railway charges, and are published by the railway companies for the information of the public in their goods stores, so that when they wish me to cart their goods, they know beforehand what they have to pay for cartage, and the goods when carted by me are in all casses accompanied by a delivery note (made out by the railway companies), setting forward a full description of the goods, the weight, the rate for railway charge and amount, together with my own special charges for cartage. The public have at all times the option of employing any other carrier or of using their own carts.

* * * * * *

I have, &c.
William Pole, Esq., I. FISHBOURNE.
House of Lords,
Westminster, S.W.

Mr. Fishbourne subsequently transmitted the following copy of the notice referred to in his letter.

COLLECTION AND DELIVERY IN CONNEXION WITH THE GREAT SOUTH-WESTERN RAILWAY OF IRELAND.

If the goods be collected or delivered they will be subjected to an increased charge according to the following rates. All goods brought to the receiving offices, 15, Duke street, and 26, Bachelor's walk, will be conveyed to Kingsbridge Station at the rate of 2*d.* for each article or lot of goods up to 112 lbs. weight; 3*d.* for 168 lbs., and so on, 2*d.* per cwt., up to 12 cwt., and from that quantity to 1 ton, the charge will be 2*s.* The same prices will also be charged for the delivery of packages or goods from Kingsbridge Station to places within the Circular Road, and when that distance shall be exceeded, an additional penny per cwt. per mile, will be charged. For any quantity of goods exceeding 20 tons, the charge will be 1*s.* 9*d.* per ton, and if exceeding 30 tons, 1*s.* 6*d.* per ton. Carts may be employed specially for the collection or delivery of goods at the rate of 2*s.* for any quantity up to 10 cwt., above which, the usual rate will be charged, and goods will be collected from any part of Dublin, on notice being sent to the offices, 15, Duke street, or 23, Bachelor's walk.

In like manner, the charges and arrangements stated above apply to all distances within 3 miles of the chief stations on the line. A list of the country receiving offices will be found on the other side.

All goods forwarded on the line will be delivered by the company, unless otherwise directed.

The delivery of goods will be considered complete when the same are unloaded out of the waggon, dray, van, or cart, and placed at the door of the consignee; the cellaring or warehousing of them afterwards will be at the owner's risk, so also will be the removal of goods from the sender's premises into the cart or waggon.

APPENDIX BD.

LETTER from MR. HENRY OLDHAM of DUBLIN, in respect to the Through Charges for Passengers between England and Ireland.

LONDON AND DUBLIN TRAFFIC.

42, Fleet Street, Dublin,
SIR, 9th November 1865.

AM I in order or in time in directing the attention of the Commissioners to the unequal charges imposed on the City of Dublin in reference to the passenger traffic to and from London, and the route of the London and North-western Railway? The complaint applies as well to the Liverpool as the Holyhead route. I quote first-class fares, second-class being in proportion.

By Holyhead mail:—	£	s.	d.
1st class single ticket to Dublin - -	3	2	0
„ „ Cork - -	3	15	6
„ „ Belfast - -	3	5	0
1st class return, Dublin - - -	5	3	0
„ „ Cork - - -	5	6	6
„ „ Belfast - - -	5	7	0

The consequence is that mercantile travellers coming to Dublin only book to Belfast or Cork, and on arrival here sell the ticket to Cork or Belfast at a reduction. Such tickets are constantly on sale at the leading hotels. Fare, Dublin to Cork 30*s.*, Belfast 20*s.*

By Holyhead and North Wall:—	£	s.	d.
1st class single to Dublin - -	2	6	0
„ „ Cork - - -	3	0	0
„ return to Dublin - -	3	9	0
„ „ Cork - - -	4	10	0

By Liverpool, until very recently, in consequence of the combination of the City of Dublin Steam Packet Company and the London and North-western Railway, there was not any through booking. Within the last month passengers may book through by steam ships of a new company connected with the Great Northern Railway, but not by the London and North-western or by the Great Western.

Belfast passengers can book through by Liverpool, Fleetwood, or Morecambe, and from Liverpool by either of the three lines to London, at following rates:—

Belfast to London:—	£	s.	d.
1st class single - - -	2	0	0
„ return - - -	2	10	
2nd class single - - -	1	10	0
„ return - - -	2	0	0

Dublin passengers can book through only by the Great Northern Railway, and are charged—

Dublin to London:—	£	s.	d.
1st class single - - -	2	6	0
„ return - - -	3	9	0
2nd class single - - -	1	19	0
„ return - - -	2	13	6

While the steam-boat fare from Belfast to Liverpool and distance are more than from Dublin to Liverpool. These fares from Dublin are the same as those from Dublin River by Holyhead, and must have been arranged in concert with the London and North-western Railway. The injustice of the charges is self-evident. The London and North-western Railway Company should be bound to place Dublin and Belfast on the same footing in relation to their traffic by Liverpool.

Your obedient Servant,
R. Jackson, Esq., Secretary, HENRY OLDHAM.
Railway Inquiry Commissioners,
Leinster Chambers, Dublin.

Appendix BE.

Mr. Roe's Remarks in reply to Mr. Cotton's Evidence before Royal Commission.

On 25th July I wrote Mr. Cotton asking permission to inspect the books which I left with him for the purpose of informing the Royal Commission as accurately as possible the particulars of the traffic receipts, number of passengers, and fares charged during the time I worked the line.

He replied as follows:—

(Copy of letter.)

"Dear Sir,—Your evidence has been submitted to my board, and I am to give evidence upon it as soon as the "Royal Commission meets again. It appears to me you will *perhaps learn from my evidence the information you require.*

"Yours truly,

"E. J. Cotton."

Mr. Cotton's Statement.

7788. Are the Commission to understand you to state that in no case has the increase exceeded 5 per cent. upon the fares that prevailed in Mr. Roe's time?—*No*, that was the advance that was made throughout the whole line.

Mr. Roe states, in answer to Questions 5740 and 5741, that he reduced the fares. This I state to be positively untrue. He then gives in proof a statement made by Mr. Garrett.

7789. Mr. Cotton puts in a letter from Mr. Hamilton, Newtownlimavady, and states there are no labourers travelling over the line.

7791. Mr. Cotton states, respecting third-class fares, I had a good deal of correspondence with Mr. Roe on the subject, and it was not until the 1st of May 1860 that we induced him to issue, in connexion with us, the third-class return tickets.

No advance made in goods rates.

Through Rates to England.

In most cases he says we get our local rates from Derry to Belfast.

7794. Mr. Cotton denies any advance of fares, and attributes the falling off in receipts to bad harvests and the opening of the Dungannon line.

7799. Mr. Cotton states, in 1860 my receipts were 17,959*l.* 5*s.* 6*d.*

7810. Mr. Cotton states that in Mr. Roe's receipts cartage was included.

7818. Mr. Cotton states, I publish at the end of my evidence a statement of fares, and that he, Mr. Cotton, acted upon them after I left, and that he never heard of any other fares.

7819. Mr. Cotton states the fares to Coleraine correctly, but does not give the fares to stations between that and Derry.

7823. Mr. Cotton directly contradicts my statement.

7824. Mr. Cotton states, that in his opinion the Irish traffic is fully developed at present without any reduction of rates.

7825. Mr. Cotton states, I did not issue market tickets, and that he never heard complaints in the north of Ireland as to his present fares.

7829. Mr. Cotton, in giving fares, states, at present the increase is about 5 per cent. over the original fares in Mr. Roe's time.

7853. Mr. Cotton states the increase in the fares has not been much talked of.

7873. Mr. Cotton states the population of Derry and Coleraine is decreasing.

7875. Mr. Cotton states, that on his taking up the line I advised him to close several stations.

Received with letter dated 25th November 1865.

Mr. Roe's Reply.

The fares third class between Newtownlimavady and Derry were increased from 1*s.* to 1*s.* 4*d.*, or 33 per cent.

Mr. Garrett was asked to write this particular style of letter under pressure; and not knowing the object in view by Mr. Cotton, the *boy* did as he was told. He now states he is not quite sure about it; he did not issue all the tickets.

Mr. Hamilton, in his letter lauding Mr. Cotton's management, omits to state that the traffic to and from his station is considerably more than the traffic of *all* the other intermediate stations between Derry and Coleraine; yet the third-class fares are 33 per cent. higher than in my time. He also omits to mention that the rate for goods, delivery in Derry included, is from 1*s.* to 1*s.* 6*d.* per ton more than I charged.

I have had frequently as many as 50 in one day between Derry, Eglintown, and Culmore; return fare, 3*d.*; distance, 12 miles there and back.

The very reverse is the fact. It was I who urged upon Mr. Cotton the importance of issuing return third-class tickets between Belfast and Derry. I was always in favour of cheap fares.

I delivered goods in Derry in *many cases free*, and never charged more than 6*d.* to 9*d.* per ton. Mr. Cotton charges 1*s.* 6*d.* per ton delivery.

This is not a fact. The local rate from Derry to Newtown, a distance of 18 miles, for flour is 4*s.* 6*d.* delivered; and for the same goods from Derry to England, *viâ* Fleetwood, the mileage proportion for this distance is about 1*s.* 4*d.*

As I have already stated, the fares have been increased in one instance at least 33 per cent.

Bad harvests is another name in Ireland for *bad management*. The value of the Omagh traffic, about 150*l.* per annum, was known to Mr. Cotton when he took up my lease.

My receipts, in 1860, were positively over 18,200*l.* If Mr. Cotton's receipts were so much more than mine in 1861, how is it that both himself and his chairman stated openly they were losing 2,000*l.* per annum by the line? If so, the management must have been extravagant.

This is not the case; I kept a separate cartage account. A good deal of my Derry goods were delivered free.

Every person in and around Derry knows that I had special fares and rates, and in giving the Commission the rates I charged, I took as fair an average as I could without the assistance of my books.

I never reduced the fares (except on the occasion of an excursion) to Coleraine; it was a joint station; but to the stations between that and Derry I reduced them as circumstances warranted.

It will be for the Commission to form an opinion whether he is justified in doing so.

The Irish traffic is not half developed at present.

A reduction of 30 per cent. on present rates would increase the traffic 50 per cent.; I have proved it, and I will prove it again at my own risk.

I did issue market tickets, and gave *buyers free* tickets.

At present, and for a considerable time, complaints are loud and numerous of the increased rates and fares on this line.

In some instances the increase is 20, 25, and 33 per cent. higher than in my time.

Any person who comes in contact with the traders of Derry, Coleraine, and intermediate stations will not verify this statement.

"I say it is not."

"*See* Thom's Almanack."

This is, to use his own words, POSITIVELY UNTRUE. I actually advised him to keep them open, and used my influence with him to keep at least two of them open, and letters passed between us upon the subject. It paid me very well to stop at those stations.

Peter Roe.

APPENDIX BF.

MEMORIAL FROM THE CHAMBER OF COMMERCE, WOLVERHAMPTON.

SIR, Wolverhampton, 28th November 1865.

I AM directed by the Council of this Chamber to enclose to you copies of some resolutions passed respecting the charges of the railway companies running through this district for the freight of goods, and to request that you will lay the paper before the Royal Commission. These resolutions have been supported by the signatures of all the principal customers of the railways in Wolverhampton, and there is a very strong feeling in their favour through the whole of this district. The iron trade, having a separate organization, has also addressed the railway companies; and, I believe, has given or offered to give evidence before the Royal Commission of the same kind and with the same views as are expressed in the enclosed resolutions. I am to add that, if it should appear desirable to the Commissioners that *vivâ voce* evidence should be given in support of the facts stated, the Council of this Chamber will endeavour to arrange that such evidence shall be furnished.

I remain, &c.

EDWARD J. GIBBS,
Secretary.

W. Pole, Esq.,
Secretary to Royal Commission
on Railways,
House of Lords, Westminster.

CHAMBER OF COMMERCE, WOLVERHAMPTON.

RESOLUTIONS passed at a MEETING of the CHAMBER, held on Tuesday, 31st October 1865.

1. That inasmuch as railway companies have been invested by law, and for the benefit of the public, with a practical monopoly (at least so far as inland towns are concerned) of the carriage of all goods, they are bound to take into account the interest of the public in fixing their rates. Hence, if a rate of 10*s.* and a rate of 20*s.* would pay the same dividend to the shareholders, the railway companies are bound to carry at the lower rate.

2. That the system of charging very low rates where any competition by sea is to be met, and very high rates where only land carriage is possible, is unjust, and contrary to the spirit of the Acts of Parliament under which railways take their powers, and that it is, in addition, permanently injurious to the railway companies themselves, as tending to check, in a very decided manner, the growth of all midland towns.

3. That the system of giving special rates to a firm that will guarantee a certain amount of traffic requires alteration, inasmuch as it gives to large and favoured firms exceptional advantages, which are contrary to the spirit of the railway Acts; and that if it be allowable to make a reduction for a guaranteed traffic, that reduction should be publicly announced and made equally to any number of firms that would give collectively the same guarantee.

4. That the existing rates for hardware and general merchandise from Wolverhampton and the district are unfair and injurious to the trade of this neighbourhood. For example, the rate for nails to London is 25*s.*; to Glasgow, 30*s.*; to Aberdeen, 40*s.*, including, in all cases, collection and delivery. Of course, the cost of collection and delivery may be taken to be nearly the same for a short journey as for a long one, and so also the cost of station-room, clerks, &c. But if these items be taken at 5*s.* per ton, which appears to be a sufficient estimate, then the station to station rate will be 20*s.* to London, 124 miles; 25*s.* to Glasgow, 280 miles; and 35*s.* to Aberdeen, 430 miles; or, in the first case, 2*d.*; in the second, 1½*d.*; in the third less than ⅞*d.* per ton per mile.

The rate for hardware from London to Wolverhampton is 30*s.*; to Liverpool, 35*s.*; to Glasgow, 45*s.*; and to Aberdeen, 40*s.*, including the usual collection and delivery. In other words, if we make the same allowance as above for dead charges, the rate to Wolverhampton is 2½*d.*; to Liverpool, 1¾*d.*; to Glasgow, 1⅝*d.*; and to Aberdeen, scarcely more than ¾*d.* per ton per mile.

Again, the rate for nails from Wolverhampton to London is 25*s.*; from London to Hull, twice the distance, it is 27*s.* 6*d.* For hardware from Wolverhampton to London, we pay 30*s.*; from London to Hull, the rate is 38*s.* 4*d* For what are called "smalls" we pay 1*s.* 6*d.* per cwt. and the Hull merchants only 2*s.*

Again, the rates from Wolverhampton to Hull, for hardware is 22*s.* 6*d.*; and from Wolverhampton to London, 30*s.*; or, if we make the same allowance as before for the standing charges, the cost of the freight alone is 17*s.* 6*d.* to Hull, and 25*s.* to London, for the same distance. In the one case about 1⅜*d.*, in the other nearly 2½*d.* per ton per mile.

It is clear also that the difference in rates for long and short journeys does not arise from the fact that it makes little difference, when once loaded, whether a ton of goods goes another 20 or 50 miles or not. For if this were the case, the rates between Wolverhampton and London, and those between Birmingham and London, would differ by an infinitesimal amount, whereas, in fact, there is a difference on hardware of 3*s.* 4*d.* for the 12 miles.

It would be easy to multiply instances, but these are sufficient to show that there exist very great irregularities and inequalities in the rates charged.

5. That the fair way of making all these rates would be to fix a proper and sufficient charge for all the expenses which attach equally to long and short journeys, and a mileage rate for the conveyance of goods from station to station, which, for the same classes of goods, should always be the same.

6. That if such a system be found for the present impracticable or difficult of adoption, the merchants and manufacturers of Wolverhampton conceive that they may fairly demand such an immediate revision of rates as will, at least, redress the more serious over-charges on their goods,

7. That unless some such reduction as has been suggested be made, it will be the interest and the duty of the traders of this district to support in Parliament, and by a guarantee of traffic, any proposed railway or canal company which is willing to adopt a sufficiently low mileage rate, and a sufficiently low and distinct system of terminal and other dead charges.

8. That these resolutions be open for signature, both by members of the Chamber and by other merchants and manufacturers of the town, and that a copy be forwarded to the chairman of the London and North-western, the Great Western, and the Midland railway companies, and of the Birmingham, Grand Junction, and Bridgewater canal companies; to the chairman of the South Staffordshire iron trade, and to the chambers of commerce of Birmingham, Sheffield, Leeds, Nottingham, and Bradford.

APPENDIX BH.

ABSTRACTS of RETURNS from IRISH RAILWAYS on CHARGES for GOODS TRAFFIC.

INQUIRY No. 1.,

Containing various Questions in regard to Railway Charges on various kinds of Goods stated in the List.

This Form of Inquiry was sent to the various Railway Companies, with the following Letter:

LETTER sent by the COMMISSION to the RAILWAY COMPANIES of the UNITED KINGDOM asking for RETURNS of CHARGES.

ROYAL COMMISSION ON RAILWAYS.

SIR, House of Lords, S.W., 1865.

I AM directed by the Royal Commission on Railways to inform you that they are desirous of obtaining accurate information respecting the actual charges made by the several railway companies for the conveyance of certain classes of articles upon the lines under their management, or over which their trains run.

With this object they have caused the enclosed form of inquiry to be drawn up, and they will feel much obliged by your answering the questions contained therein as fully as possible, and returning it to me as early as you can conveniently do so.

I am, &c.

WILLIAM POLE,
Secretary.

ARTICLES CARRIED FROM STATION TO STATION ONLY, OR FROM JUNCTION TO JUNCTION ONLY, ON ALL YOUR LINES.—(A.) In Companies' Waggons, when loaded and unloaded by the Owners.

x.—What is the Minimum charged per Ton for each Article for the shortest Distance?

Answers to Questions 2*c* to 9.—Traffic in Companies' Waggons.

——	Belfast and County Down.	Belfast and Northern Counties.	Cork and Bandon.	Cork and Kinsale Junction.	Cork and Youghal.	Cork, Blackrock, and Passage.
2*c*. What is the charge per ton for terminal or station accommodation?	No charge made	No defined charge	Nil.	——	Worked by Great Southern and Western.	No return. No goods' traffic. Pleasure line.
2*c*. Is it included in the foregoing charges?	Yes	Terminal and station accommodation is included in charges given.	——	——		
2*d*. What is the charge for loading and unloading when done by the Company?	We would not load or discharge a larger quantity than a portion of a waggon load. Smaller quantities than waggon loads (5 tons) when loaded by the company are charged at the rate of goods of the next higher class, which, as well as I can average our rates, would be a fourth more than the rates quoted.	We never load or unload this description of traffic.	——	——		
2*d*. Is it in addition to the foregoing charges?	Yes.	——	——	——		
3. Are the above mileage charges uniformly applied between all stations on your system of railways?	(*See* below)*	I have endeavoured to give a fair average, but the rates given will not apply in all cases.	Yes, with the following exceptions.	Yes.		
4. If not, state the nature of the exceptions.	(*See* below)*	The following are a few of the exceptions: *coals*, Londonderry to Coleraine, 33 miles, 2*s*. per ton; Belfast to Ballymoney, 54 miles, 4*s*. per ton; *gravel* and *sand*, Toome to Belfast, 36 miles, 2*s*. per ton; *freestone*, Cookstown to Belfast, 54 miles, 3*s*. 6*d*. per ton; *broken stones*, Castlerock to Londonderry, 28 miles, 1*s*. 9*d*. per ton.	The rates between Cork and Kinsale for 24 miles are the same as those between Cork and Bandon for 20 miles, on which distance the rates were originally struck.	——		
5. Is the traffic of this class conveyed at the owners' risk, or otherwise?	Conveyed at owners' risk if in 5 ton lots, loaded and unloaded by themselves.	At owners' risk	Yes (owners' risk)	At owners' risk.		
6. If not, state in what respects you depart from this condition?	Small quantities under 5 tons which are charged for at the higher rate are conveyed at the risk of the company.	——	——	——		
7. Do you undertake to deliver this class of traffic within a specified time?	Yes; within 24 hours, unless we guard ourselves against liabilities for delay in the receipts given for the goods.	No	Yes; but at the stations only	Yes.		
8. What time is allowed at the stations for loading and unloading this class of traffic.	24 hours nominally is the time allowed; but we cannot enforce demurrage. The unreasonable detention of our waggons is one of the chief difficulties we have to contend with.	24 hours is the time allowed; but it is generally detained longer, and it is with great difficulty we can obtain any charge for demurrage.	24 hours	24 hours.		
9. What charge do you make for demurrage of waggons?	——	3*s*. per diem	Our regulations allow us to charge 3*s*. per day or part of a day.	Our regulations allow us to charge 3*s*. per day or part of a day.		

* The distances over which goods traffic is carri ed on the Belfast and County Down line are so short, and the line itself is so circuitous, that our goods rates have not been calculated at any uniform rate per mile, but have been struck to meet the competition by road. Th e rates quoted per mile will therefore not work out exactly correct for all our stations, an average mileage rate having been deduced as nearly as practicable from the arbitrary rates charged to the different stations. Goods are frequently conveyed at rates less than those quoted by special agreement. We have generally to make a bargain for large consignments. We frequently take coarse traffic, such as the articles named in this list, for a minimum c harge of 5*s*. per 5 ton waggon for distances under 10 miles, and 10*s*. per waggon for 27 miles, and intermediate distances in proportion, but always in such cases with an understanding as to the quick discharge of our waggons.

ANSWERS to QUESTIONS 2*c* to 9.—TRAFFIC in COMPANIES' WAGGONS—*continued.*

—	Dublin and Belfast Junction.	Dublin and Drogheda.	Dublin and Meath.	Dublin, Wicklow, and Wexford.	Great Southern and Western.	Irish North-western.
2*c*. What is the charge per ton for terminal or station accommodation ?	Included in charges	According to the distance conveyed ; for 30 miles they charge 9*d*. terminal at each end.	None	No charge beyond the mileage rate.	1*s*. 6*d*. excepting on draining pipes and tiles (agricultural).	Nil.
2*c*. Is it included in the foregoing charges ?	The terminal is in the charges	Additional	Yes	No charge beyond the mileage rate.	Yes.	—
2*d*. What is the charge for loading and unloading when done by the Company ?	Not done by this company	Not done by this company	Done in all cases by owner—exceptions :—*Iron ore*, 9*d*. per ton in addition to mileage charge. 9*d*. per ton is the charge for haulage for ¼ mile on tramway ; transfer of load from tramway waggon to railway waggon, unloading at port, and for shipping. *Sulphur ore*, 1*d*. per ton loading, and 1*d*. per ton unloading.	This company does not load or unload, with the following exceptions	Not done by this company. As respects *peat* and *salt in bulk*, is included in terminal.	Nil
2*d*. Is it in addition to the foregoing charges ?	Nil	Nil	Owner does all	In respect to *iron ore* and *sulphur ore* it is in addition to mileage charge.	As respects *peat* and *salt in bulk*, it is included in the terminal.	—
3. Are the above mileage charges uniformly applied between all stations on your system of railways ?	Generally they are	Yes, as a general rule, but with occasional exceptions.	Yes, as nearly as possible	Yes	No	Yes, as near as may be.
4. If not, state the nature of the exceptions.	When there are two routes the public have the advantage of being charged for the shortest.	When the route per rail is circuitous we give the public the advantage, and charge only for the direct distance.	*Coals* are carried in most cases at very little beyond 1*d*. a mile a ton.	—	Vary where distance by rail is greater than that by road, and at competitive points.	—
5. Is the traffic of this class conveyed at the owner's risk, or otherwise ?	Nominally at owners' risk, but there is little risk in carrying this class of traffic.	Nominally, but there is little or no risk.	At the owners' risk	Risk of company	Except *peat* and *salt*	At owners' risk, except in the case of *manufactured salt*.
6. If not, state in what respects you depart from this condition ?	Nil	Nil	No departure	—	—	—
7. Do you undertake to deliver this class of traffic within a specified time ?	Within 48 hours, unless there is some arrangement to suit circumstances.	Within 48 hours, unless otherwise arranged.	No specific understanding, but as a rule we deliver nearly with as great regularity as if ordinary goods.	No	No	We undertake to convey it on the railway in reasonable time, but not to collect nor deliver it to or from the station.
8. What time is allowed at the stations for loading and unloading this class of traffic ?	One day for loading ; two days for unloading.	24 hours	24 hours, but a much longer space is allowed in practice.	24 hours	24 hours	No limit is, in practice, made.
9. What charge do you make for demurrage of waggons ?	3*s*. per day is the charge, but it is seldom enforced.	None in practice ; nominally 3*s*. per day per waggon.	3*s*. a day, but in no case exacted up to this date.	3*s*. per day, but rarely or ever charged.	3*s*. per waggon per day	We have never as yet charged demurrage.

NOTE.—The Irish North-western district is almost exclusively agricultural ; there is very little manufacture, and very little mineral traffic.

ANSWERS to QUESTIONS 2*c* to 9.—TRAFFIC in COMPANIES' WAGGONS—*continued.*

—	Midland Great Western.	Newry and Armagh.	Newry, Warrenpoint, and Rostrevor.	Ulster.	Waterford and Limerick.	Waterford and Tramore.
2*c*. What is the charge per ton for terminal or station accommodation?	Nil	6*d*. at each end	6*d*. to 1*s*.	Included in the foregoing charges, but is varied according to circumstances.	The foregoing rates are inclusive of terminal accommodation.	—
2*c*. Is it included in the foregoing charges?	—	*Local*; yes, for one end only 2 companies; no. 3 companies; no.	Yes	Included in the foregoing charges, but is varied according to circumstances.	Yes.	—
2*d*. What is the charge for loading and unloading when done by the Company?	6*d*. per ton	3*d*. per ton at each end	5*d*. to 8*d*.	Loading and unloading are performed by the sender and consignee. If done by this company, only actual payments for this service are charged.	The loading and unloading are not performed by this company, except under special agreement, and vary from 3*d* to 6*d*. per ton.	—
2*d*. Is it in addition to the foregoing charges?	Yes	Yes	Yes, in the case of the 9*d*. rate; *i.e., compost, gravel, manure in bulk, materials for road repairs, scoriæ, and slag.*	(*See* preceding reply)	Yes.	—
3. Are the above mileage charges uniformly applied between all stations on your system of railways?	No	No	This company has only terminal stations.	No	They vary according to circumstances.	Yes.
4. If not, state the nature of the exceptions.	The rates quoted are in general use; but reduced rates are made for certain quantities under particular conditions, and to suit the requirements of particular districts.	Competition by road, canal, and other railway lines.	—	The exceptions are so very numerous that it is impossible to enumerate them in this return.	The exceptions are when it is found necessary to obtain the traffic at special lower rates than the ordinary tariff, but this applies principally to cargoes or large quantities	—
5. Is the traffic of this class conveyed at the owner's risk, or otherwise?	Owners' risk	At owners' risk	No	At owners' risk in all cases	As a rule, it is carried at owners' risk.	Company's risk.
6. If not, state in what respects you depart from this condition?	By increasing the rates 20 per cent.	—	—	—	According to circumstances; and in respect to damage where it proceeds from circumstances beyond the control of senders.	—
7. Do you undertake to deliver this class of traffic within a specified time?	No	No	No	No	Lowest specific time for delivery; but generally 24 hours.	Within the day.
8. What time is allowed at the stations for loading and unloading this class of traffic?	24 hours; Sundays, Christmas Day, and Good Friday excepted.	24 hours	Two clear days; and the company assists to load and unload all traffic and generally does all the porterage duties to avoid demurrage.	A clear day; unless under special circumstances, when a further reasonable time is allowed.	24 hours.	—
9. What charge do you make for demurrage of waggons?	3*s*. per waggon per day	3*s*. per diem	3*s*. per day	3*s*. per day, under clearing house regulations; but it is rarely enforced.	3*s*. per day after 24 hours.	—

ANSWERS to QUESTIONS 10 to 16, Traffic in Owners' Waggons; 17 to 20, Through Traffic; 21, 22, Contract Charges.

—	Belfast and County Down.	Belfast and Northern Counties.	Cork and Bandon.	Cork and Kinsale.	Cork and Youghal.	Cork, Blackrock, and Passage.	Dublin and Belfast Junction.	Dublin and Drogheda.	Dublin and Meath.	Dublin, Wicklow, and Wexford.	Great Southern and Western.
TRAFFIC IN OWNERS' WAGGONS.											
10. State in the following table the charges on your own line for the conveyance of the various articles named, in tons of 2,240 lbs., or the equivalent measurement.	Nothing done in owners' waggons.	10. For *rock salt* the minimum charge per ton is 10*d*., the minimum load 5 tons, applicable to the distance of 9 miles from Duncrue to Belfast.	These questions do not apply to this railway.	These questions do not apply to this railway.	Worked by Great Southern and Western.	No return. No goods traffic. Pleasure line.	10. No traffic in owners' waggons.	There are no owners' waggons on this company's line.	No traffic carried in owners' waggons. None likely to be presented *pro tempore*.	This company does not convey in owners' waggons.	No traffic in other than company's waggons on this railway.
10*g*. Do the charges include returning empty waggons?		10*g*. Yes.					10*g*. Nil.				
11. Are the above charges uniformly applied between all stations on your system of railways?		11. We only carry salt rock in owners' waggons.					—				
12. If not, state the nature of the exceptions - -		—					—				
13. Is the traffic of this class conveyed at the owners' risk or otherwise?		13. At owners' risk.					—				
14. Do you undertake to convey this class of traffic within a specified time?		14. Yes.					—				
15. And to return the empty waggons within a specified time? And if so, in what time?		15. Yes. The same day as landed.					—				
16. Do you allow demurrage on owners' waggons when not returned within the specified time?		16. No.					—				
THROUGH TRAFFIC.											
17. Do you make through charges for this class of traffic with all other railway companies connected with your system by junctions?	Our traffic is all local.	17. Through charges are made with the companies named. [Carrickfergus and Larne, and Londonderry and Coleraine.] but we have no junction with any other lines.	These questions do not apply to this railway.	These questions do not apply to this railway.	Worked by Great Southern and Western.	No return. No goods traffic. Pleasure line.	17. Yes.	17. Yes.	17. Yes	This line is isolated and has no junction with any other.	17. Yes.
18. Are the junctions considered as stations for this class of traffic?		18. Yes.					18. Yes.	18. Yes.	18. No		18. Yes.
19. If not, state the exceptions - - - - -		—					—	—	—		—
20. What arrangements are made for the interchange of traffic with other companies, when through charges are not given?		—					20. The local rates are charged and the waggons allowed to go through.	20. Through rates are given.	—		20. Local rates of each company charged, and waggons sent through.
CONTRACT CHARGES, WHETHER IN COMPANIES' OR IN OWNERS' WAGGONS.											
21. Have you any scale of charges applicable to contracts? If so— *a*. Is the charge based on a minimum annual payment, or on the quantity carried? *b*. Or how otherwise?	21. We have no contracts for goods traffic.	21. No.	These questions do not apply to this railway.	These questions do not apply to this railway.	Worked by Great Southern and Western.	No return. No goods traffic. Pleasure line.	21. No.	21. None. *a*. Nil. *b*. Nil.	21. on coal.	*See* above.	21. No.
22. Have you any special contracts independent of the foregoing scale of charges or conditions?	*See* reply to Nos. 3 and 4.	22. No.					22. For large quantities of goods arrangements are at times made to take them at lower rates.	22. Occasionally for large quantities, conditioned to suit economy of haulage, low rates are named.	—		22. Yes.

Answers to Questions 10 to 16, Traffic in Owners' Waggons; 17 to 20, Through Traffic; 21, 22, Contract Charges—*continued.*

	Irish North-western.	Midland Great Western.	Newry and Armagh.	Newry, Warrenpoint, and Rostrevor.	Ulster.	Waterford and Limerick.	Waterford and Tramore.
TRAFFIC IN OWNERS' WAGGONS.							
10. State in the following table the charges on your own line for the conveyance of the various articles named, in tons of 2,240 lbs., or the equivalent measurement.	All goods are carried in waggons belonging to this company.	All rolling stock belongs to this company.	No traffic in owners' waggons.	This company has no such traffic.	No waggons belonging to private owners are used on this railway.	Not carried in any but company's waggons.	—
10*g*. Do the charges include returning empty waggons?							
11. Are the above charges uniformly applied between all stations on your system of railways?							—
12. If not, state the nature of the exceptions -							—
13. Is the traffic of this class conveyed at the owners' risk, or otherwise?							—
14. Do you undertake to convey this class of traffic within a specified time?							—
15. And to return the empty waggons within a specified time? And if so, in what time?							—
16. Do you allow demurrage on owners' waggons when not returned within the specified time?							—
THROUGH TRAFFIC.							
17. Do you make through charges for this class of traffic with all other railway companies connected with your system by junctions?	17. Yes - -	17. Yes, in company's waggons.	17. Yes, where permitted. Obstructions to this are specially brought before the committee.	17. Yes - - -	17. Yes - - -	17. We have through rates for this class of traffic with other companies.	—
18. Are the junctions considered as stations for this class of traffic?	18. All our junctions with other lines are situate at stations.	18. Yes - - -	18. Not always - -	18. Yes - - -	18. The junctions are at stations in all cases.	18. Yes.	—
19. If not, state the exceptions - - -	- - -	19. *See* reply 18 - -	19. When accommodation not suitable for loading or unloading of goods.	- - - -	- - - -	19. None.	—
20. What arrangements are made for the interchange of traffic with other companies, when through charges are not given?	- - -	20. Each company delivers at the junction of the other company. A load less than two tons is transhipped; a waggon with more than two tons is sent through to destination of its contents.	20. The goods are re-booked at local rates, and waggons sent forward under railway clearing house regulations.	20. Goods booked to the most distant through station in the direction of destination, and thence re-booked.	20. Local charges are made to the junction stations, and goods are either passed by transhipment or in the waggons, as mutually convenient for the companies.	20. If there is a ton weight or upwards, the waggon is passed on to the foreign company's line. When less than that quantity it is discharged at the junction, where the first charge becomes a "paid on" on the foreign line.	
CONTRACT CHARGES, WHETHER IN COMPANIES' OR IN OWNERS' WAGGONS.							
21. Have you any scale of charges applicable to contracts? If so—	21. No - -	21. No - - -	21. No - - -	21. - - -	21. - - - -	21. None - - -	21. No.
a. Is the charge based on a minimum annual payment, or on the quantity carried?				*a*. Neither - -	*a*. No - - -	*a*. None.	
b. Or how otherwise?				*b*. That all the traffic shall be sent by the contracting party, and settlements monthly.		*b*. None.	
22. Have you any special contracts independent of the foregoing scale of charges or conditions?	22. No - -	22. No - - -	22. Special rates are made upon certain staple articles of transit, and on certain quantities of same.	22. Yes - - -	22. No - - -	22. None.	—

Appendix BI.

Appendix to Mr. Gentel's Evidence.

Comparative Statement of the Great Northern Grain Rates to Lincoln.

	Rates.	Miles.
Section A.	*s. d.*	
From — *To*		
Boston — Lincoln	5 0	31
Nottingham — „ *viâ Boston*	4 9	87
Hubberts Bridge — „	6 0	35
Swineshead — „	6 0	37
Heckington — „	5 0	43
Sleaford — „	5 0	46
Ancaster — „	6 8	51
Bourn — „	10 0	73

All the above stations, with the exception of Nottingham, are on the Great Northern loop and the Boston and Midland Counties line, the latter worked by the Great Northern. It will be seen that the rates calculated by the distances are very excessive and that the Great Northern Railway Company, in order to invade the Midland territory, carry grain from Nottingham over the same route and nearly three times the distance at a lower rate than from any of their own stations.

Section B.		
From — *To*		
Peterborough — Lincoln	10 0	62
Birmingham — „ *viâ Peterboro'*	11 0	162
Higham Ferrers — „	17 6	93
Oundle — „	15 0	76
Thrapston — „	15 0	82

All the same route, opposition to Birmingham only. From this table it will be seen that the Great Northern Company, to compete with the Midland Company from Birmingham, charge only 11*s.* per ton for a distance of 162 miles, but from the other stations in this Section from which there is no opposition the rates for about half that distance are greatly increased.

Section C.		
From — To		
London — *Lincoln*	11 8	138
Cambridge — „	15 0	99
Huntingdon — „	11 8	81
St. Ives — „	13 4	86
Kennett — „	16 8	118
Thirston — „	17 6	108
Six Mile Bottom — „	16 8	107
Lynn — „ 2 tons	14 2	100
Lynn — „ 5 „	12 6	100
Norwich — „ 2 „	18 4	145
Norwich — „ 5 „	17 6	145
Wells — „ 2 „	19 2	149
Wells — „ 5 „	17 6	149
Attleborough — „	17 6	136
Bury St. Edmunds — „	17 6	129

No opposition except to London.

In this Section London rates to Lincoln are compared with stations in the Eastern Counties, and it is very apparent how greatly Lincoln suffers for want of a competing through line to those counties.

	Rates.	Miles.
Section D.	*s. d.*	
From — To Lincoln a uniform rate of		
Edinburgh, Musselburgh, and all stations in the Lothians varying in distance from 275 miles to 375 miles from Lincoln by the Midland and Great Northern routes	18 4	275 to 375

Opposition by Carlisle or Newcastle.

Shows the rates from Scotland in order that the same may be compared with Eastern Counties rates in Section C. There is no need to comment on the vast difference between them.

Section E.		
Rates from the Northern ports, running 72 miles on the Great Northern to Lincoln.		
From — *To*		
Sunderland — Lincoln	8 4	163
Hartlepool — „	8 4	142
Newcastle — „	8 4	184

A statement of the rates from northern ports conveyed 72 miles on the Great Northern contrasted with Eastern Counties stations in Section C., conveyed on the same line a less distance.

Section F.		
Manchester, Sheffield, and Lincolnshire and Great Northern rates from stations north of Lincoln, which the Great Eastern will affect.		
From — *To*		
Kirton Lindsey — Lincoln	5 10	27
Northorpe — „	5 10	25
Blyton — „	5 10	23

No opposition.

From — *To*		
Gainsborough — Lincoln	3 0	19

Same route with opposition.

Shows three stations near Gainsborough, which would be affected by the Great Eastern proposed line, and the rates from those stations without any opposition compared with the rates from Gainsboro with opposition.

COMPARATIVE STATEMENT of GRAIN RATES from the LINCOLN, SLEAFORD, and BOURN DISTRICTS, with NORTHAMPTON, NORFOLK, and other BARLEY DISTRICTS to BURTON-ON-TRENT.

Lincoln, Sleaford, and Bourn District.	Distance from Burton.	Rate per Ton.	Northampton District.	Distance from Burton.	Rate per Ton.	Norfolk and Suffolk.	Distance from Burton.	Rate per Ton.	West and Foreign Ports.	Distance from Burton.	Rate per Ton.
	Miles.	s. d.		Miles.	s. d.		Miles.	s. d.		Miles.	s. d.
Bourn	71	11 8	Peterborough	84	9 6	Lynn	121	15 10	Gloucester	86	7 1
Edenham	72	11 8	Wansford	88	9 10	Fakenham	160	15 10	Grimsby	106	11 0
Sleaford	64	10 0	Oundle	82	9 4	East Dereham	150		Hull	122	11 0
Ancaster	62	10 0	Thrapston	74	8 8	Norwich	167		Hartlepool	157	12 2
Heckington	66	10 0	Higham Ferrers	68	8 2	Wells	188		Sunderland	176	12 2
Swineshead	72	11 8	Castle Ashby	72	8 6	Yarmouth	187				
		11 8	Bedford	79	9 1	Lowestoft	190	15 10	*Freight from Foreign Ports.*		
Boston	85	2 tons 10 6	Helpstone	78	9 0	Bury St. Edmunds	160				
		5 tons	Luffenham	68	8 0	Woodbridge	195		Nantes } to Gloucester	Per Vessel.	9 0 to 11 6
Kirkstead	78	15 0	Rockingham	58	7 1	Colchester	193		Caen } to Gloucester		
Horncastle	84	14 2	Market Harbro'	46	6 3	And all other extreme South stations a uniform rate of			Bordeaux } to Gloucester		
Bardney	72	14 2	Oakham	58	7 4			15 0 to 15 10	Hamburgh to Hull, Sunderland, Hartlepool, or Grimsby		5 0 to 6 0
Brigg	95	11 8	Ashwell	56	7 1						
Kerton	88	11 8	Wellingbro'	64	7 9	Reading and Great Western stations	120 to 150				
Northorpe	87	11 8	Kettering	56	7 2						
Lincoln rate by Midland Railway	61	6 6	Northampton	66	7 11						
Louth and Lanark	80 to 100	15 0 to 17 6									

The object of this Table is to show how disadvantageously the agricultural county of Lincoln is placed, in comparison with other counties, in conveying its produce to the great consuming town of Burton-upon-Trent. The stations mentioned in the first column, with the exception of the last one, are Great Northern stations, the whole of the southern division of the county being in the hands of that company. On reference to the Table it will be seen that where the distances are the same as in the Northampton district the rates are very unequal. Thus, compare Swineshead with Castle Ashby, Kirkstead with Helpstone, Lynn and Fakenham, Heckington with Higham Ferrers, Horncastle with Oundle, Sleaford with Wellingborough, Bourn with Castle Ashby.

SUMMARY.

—	Miles.	Rate.
		s. d.
Lincoln district, for an average of	76	11 10
Northampton	70	8 2
Norfolk, Suffolk, and Reading	176	15 10
Gloucester, principal port for French barley	84	7 1
Sunderland, Hull, and Grimsby	136	11 7
French ports	—	16 0 to 18 0

From the Summary it will be observed that the Lincoln district pays nearly half more than Northampton, more than half more than Norfolk, and nearly double that of Gloucester.

It will also be seen that from stations in the Lincoln district grain costs nearly as much conveying to Burton as from the South of France.

APPENDIX BK.

ON an OFFICIAL INSPECTION of RAILWAYS, and the Management of the Traffic thereon as a means of preventing Accident and Loss.—By EDWIN HILL, of the Inland Revenue.

Recent disclosures have made public the disquieting fact that the elaborate and carefully considered regulations laid down by the directors of our various railways for the guidance of their servants in the management of the traffic, including the precautions to be observed when portions of the lines are necessarily under repair, are in practice commonly disregarded; and that to such an extent as to render their promulgation all but useless.

Breaches of these regulations cannot be unattended with danger, and therefore ought never to be passed over without punishment; instead of which, such violations, however flagrant they may be, are commonly passed over with but little notice, if any—except when they lead to immediate accident—hence they become habitual. And when accident really does come, the anger excited against the parties in fault, is proportioned rather to the extent of the damage done than to the amount of the neglect that led to it.

Thus treated, accidents are naturally looked upon rather as instances of bad luck than as the sure consequences of habits of neglect; nor can the eradication of this mischievous feeling be expected, consistently with experience, from anything short of a vigorous and steady enforcemnt of the rules laid down; all breaches being sternly punished, whether followed by accident or not, on the plain ground that, with the enormous forces employed, the habitual neglect of the necessary precautions can lead to nothing but disaster first or last.

It has often been proposed to call upon the legislature to make regulations for the management of the railways, such regulations to have the force of law. But the fatal objection is instantly raised, that by such course the responsibility of the railway authorities would be destroyed; as responsibility without power is a mere delusion.

Some have even proposed that the Government shall take the whole administration of the railways into their hands.

I do not here attempt to discuss this proposition, my object being to suggest an intermediate course; one which is easy of trial, and which, if adopted, it would be advantageous to continue, let the administration of the railways ultimately devolve upon whomsoever it may.

What I have to bring under your consideration is the propriety of adopting, in respect of the railways, a system of official inspection analogous to that in operation as regards our factories, mines, schools, poor-law unions, and prisons.

Mere inspection with communication of the results. Every power necessary for the attainment of full and correct information upon all matters affecting the public safety and convenience, both directly and indirectly; but no power whatever of interference in the management. The inspectors to be simply held responsible for discovering and bringing to light everything in the management of the lines under their charge respectively that experience has shown, or that they may deem to be detrimental to the public safety, or needlessly obstructive of the public convenience.

It is unnecessary to go into particulars respecting the duties that it would be proper to throw upon such inspectors, inasmuch as the experience gained in the working of the system of inspection as now carried on, is so ample that there could be no difficulty in framing suitable instructions; and after all it is not on the framing of the instructions, but on the choice of the men appointed to carry out the purpose, that the success of the measure must depend.

Able and zealous men will, for the most part, themselves discover the path to a successful result, whilst inefficient men will be all but certain to miss it, though it be mapped out for them never so clearly.

It is needless for me to dilate upon the efficiency of simple but systematic inspection and report in procuring the removal of curable evils. The manifold defects that have been brought to light by our poor-law inspectors, prison inspectors, factory and school inspectors, and others, and that in consequence have been either cured wholly or at least much amended, are not unknown; although perhaps not so generally understood and borne in mind as might be wished. But that one of the most effectual means of abating injurious practices, and effecting the suppression of abuses, is to expose them to the broad light of publicity, is a matter too generally understood and acknowledged to need argument. All I have to urge, therefore, is the superiority of *continuous, systematic, and thorough examination and inquiry*, conducted by men of ability and knowledge of the subject, appointed for the purpose, and hence responsible in their character and position for its due performance, over depending upon mere fortuitous information, given by persons, perchance but imperfectly acquainted with the facts, and concerning not so much the *habitual observance or neglect of the appointed precautions*, as simply the ill consequences of their non-observance in individual cases.

Under such a system of inspection, I think I may unhesitatingly aver that such a total neglect of the necessary precautions, explicitly laid down by the directors, as, in the case of the late Staplehurst accident, was shown to attach equally to the workmen, the foremen, and the superintending engineers, could not have been concealed; and being brought to light, would not have been endured; and, therefore, that its lamentable consequences could never have occurred. I need not multiply cases in which precisely the same reasoning might be urged, as they are no doubt but too sufficiently in remembrance.

In conclusion, I would suggest that an official inspection, thus wholly independent of the administration of the railways, and, therefore, unbiassed either in its favour or against it, would in all probability prove highly economical to the railway companies themselves; the loss by the accidents of a single half-year, upon one line only, (including the accident just alluded to) having been officially estimated at some 50,000*l.* The expense of the necessary staff of inspectors, clerks, &c., need not be great, and if my anticipation of an important economy to the railways be realized, such expense ought to be cheerfully borne by the railway companies themselves.

Appendix BL.

Memorandum on the Coal Trade of Ireland.—By William K. Sullivan, Ph. D., Professor of Chemistry to the Industrial Museum of Ireland.

Among the probable sources of a prospective increase of goods traffic upon Irish railways, coal undoubtedly holds the first rank. In order to determine the value of this source, or in other words to ascertain whether the use of coal in the interior of Ireland will so far increase as to materially affect railway traffic, we have to consider the following points. 1. What is the present coal importation into Ireland, and has it materially increased within the last 20 or 30 years? 2. What is the relative cost of peat and coal, and what probability is there of peat being largely used in manufactures? 3. What are the relative proportions of the coal consuming and peat consuming portions of Ireland? This subject has not attracted the attention it deserved, and consequently it is not easy to procure accurate statistics respecting some points of the inquiry; much however of what I shall give in this memorandum will be found to be based upon very accurate data not hitherto brought together.

In the year 1825 the amount of coal imported into Ireland was estimated to be 738,253 tons. The Irish Railway Commissioners estimated the import in 1835 to be 1,001,378 tons. According to a return made by the local officers of customs, and moved for at the end of the last session of parliament by Mr. Monsell, the importation in 1864 was 2,113,209 tons. The following table shows the quantities imported through the different ports in the years 1835 and 1864 respectively:—

Eastern Ports.*

Name of Port.	Number of Tons of Coal and Coke imported in	
	1835.	1864.
Ardglass and Kilough	4,088	—
Arklow	4,186	—
Balbriggan	11,373	—
Ballycastle	148	—
Belfast	141,250	562,767
Coleraine and Portrush	3,777	13,994
Cork	115,614	264,199
Donaghadee	5,186	—
Drogheda	37,000	48,465
Dublin	349,230	675,055
Dundalk	25,363	72,066
Dungarvan	9,877	—
Larne	9,185	—
Londonderry	13,966	—
Newcastle Creek	2,987	—
Newry	26,627	100,852
Ross	24,550	25,670
Strangford	13,133	40,503
Waterford	64,630	120,014
Wexford	29,000	45,010
Wicklow	7,296	—
Total	898,466	2,042,301

Western Ports.

Ballina	600	1,500
Ballyraine	518	—
Ballyshannon	1,225	—
Baltimore	697	—
Bantry	205	—
Berehaven	2,066	—
Clare	1,671	—
Donegal	598	—
Galway	4,879	9,499
Killala	284	—
Kilrush	88	—
Kinsale	13,500	—
Limerick	29,638	36,974
Skibbereen	—	8,434
Sligo	6,184	6,606
Tralee	1,675	5,792
Westport	2,533	2,103
Total	66,379	70,908

The returns for 1864 are not as complete as those of 1835, as they do not include the small quantities imported through such small ports as Balbriggan, Bray, Youghal, &c. The total amount thus imported is however small, and though it would help to increase the quantity of coal now consumed compared with that used in 1835, it would not change the general conclusions deducible from the preceding table. Of those conclusions I shall only here mention one, namely; that while the import of coals through the eastern ports has more than doubled, and that with few exceptions the quantity imported through each port has considerably increased, the total quantity of coal imported through the western ports on the other hand has not much increased, and no marked increase has taken place in the import of any port.

The great increase in the consumption of coal which has taken place since 1835 is partly due to the increase of manufactures, but chiefly to the substitution of coal for peat. The increase has been more rapid within the last 15 years than in the period from 1835 to 1850; the substitution of coal for peat is to be attributed to the exhaustion of bogs in certain districts, and the diminution of population, and the consequent rise of the rate of wages in the districts supplied by the eastern ports The substitution of coal for peat which the increase of the coal trade shows, proves that the cost of peat fuel must be as high as that of coal in the districts where the substitution has taken place. This brings me to the second point I have to consider; namely, the relative cost of coal and peat.

The coal used in Ireland is almost wholly derived from four districts, Scotland, Cumberland, Lancashire, and South Wales. The price of coal depends upon the locality from whence it is obtained, and upon its special quality.

* I include under this head all ports along the northern, eastern, and southern coasts between the ports of Londonderry and Cork. Under "Western Ports" I include all the ports of the southern, western, and northern coasts west of Cork and Londonderry.

Scotch steam coal can be imported into Dublin at from 10*s.* to 11*s.* per ton. Workington and other Cumberland steam coals of good quality cost from 12*s.* to 12*s.* 6*d.* The inferior qualities of South Wales coal could be imported at from 10*s.* 6*d.* to 12*s.* 6*d.* The best Whitehaven picked coal for domestic purposes may be imported at from 14*s.* to 14*s.* 6*d.*; and Wigan coal for 1*s.* more. The best picked South Wales coal costs about 16*s.* per ton, that being the contract price paid last year by one of the great railway companies. The prices in Cork and Waterford for South Wales coal are about the same. The railway company just alluded to paid only 3*d.* per ton less for the portion of their contract coal delivered at Cork. Three or four years ago this company paid only 14*s.* 6*d.* per ton for the same kind of coal for which they are now paying 16*s.* The freights are usually about 6*s.* to 6*s.* 6*d.* per ton from South Wales to Cork or Dublin; but when back freights of ore or other heavy goods can be regularly shipped to the coal exporting port, the freight per ton of coal, from, say Swansea to Waterford, is sometimes not more than 2*s.* 6*d.*

There being no coal wharves connected with the Irish railways, and the stations of the railways in Dublin, with one exception, being at a considerable distance from the quays, any coal sent by railway must be carted from the ships to the stations. This costs at least 1*s.* 6*d.* per ton. Two of the railway companies get their coal by canal to their coal depôts. The depôt of the Great Southern and Western Railway is about 1½ miles from their terminus; the cost by canal and a small branch line from the port to this depôt is, I am told, about 1*s.* 9*d.* per ton. We have therefore to add to the cost of the coal as delivered at the quays 1*s.* 6*d.* for cartage, and at least 6*d.* for loading at the station. The following table will afford an idea of the cost of a few of the different kinds of coal imported into Dublin, when carried to different railway stations in the interior of the country.

Stations.	Number of Miles from Dublin.	Carriage per Ton.	Rate per Ton per Mile.	Cost of Coal per Ton delivered at.			
				Best Welsh.	Inferior Welsh.	Scotch.	Workington Steam.

I have given Knocklong as an example of very nearly the extreme distance that coal need to be carried by railway from a port in Ireland. As Knockling is only about 48 miles from Cork it would be supplied with coal from the nearer terminus.

The average rate per ton per mile charged upon the Irish railways appears to be somewhat above one penny. Taking it at one penny the minimum charges upon one ton of coal carried from the quays of Dublin to a station 50 miles distant amount to 6*s.* 2*d.* If there were a central station in Dublin connected with a proper coal wharf a saving of at least 1*s.* 6*d.* per ton would be effected; and if a reduction in the present rates of carriage on the railways to one half were made, the total saving in the carriage of coal to a station 50 miles from Dublin would be 3*s.* 7*d.* The following table will show approximately what the cost per ton of the principal kinds of coals imported into Dublin would be at stations 50 and 100 miles distant respectively from Dublin, supposing the existence of a central station and coal wharf, and the rate of carriage 0·5*d.* per ton per mile, including termini.

	50 Miles distant.		100 Miles distant.	
	s. *d.*	*s.* *d.*	*s.* *d.*	*s.* *d.*
Best picked Welsh coal	18 7		20 8	
Inferior Welsh Coal	15 1		17 2

Workington steam coal	14 7	to 15 7	16 8	to 17 2
Best Whitehaven house coal.	16 7	to 17 1	18 8	to 19 2
Wigan	17 7	to 18 1	19 8	to 20 2

These prices are to be looked upon only as approximations, and are exclusive of waste and importers' profit; they represent, in fact, the cost of coal to a manufacturer who directly imports at least a cargo, and are in all cases the prices actually paid during the last eighteen months. I know of at least one case where, under favourable conditions as to freight, and by a special arrangement with a railway company, the best Welsh coal has been imported into the interior of Ireland to a station about 70 miles from the port for 17*s.* 6*d.* per ton.

In order to determine the cost of peat or turf I shall have to make some brief observations on the different kinds of peat bogs found in Ireland and the different qualities of fuel obtained from each.

Peat bogs are found in every county of Ireland and are more or less used everywhere as sources of fuel. They may be divided into three categories,—1, the great flat bogs which lie in hollows of the central plain of Ireland, chiefly in the counties of Kildare, King's, Queen's, West Meath, Galway, &c.; 2, the mountain bogs, which covers the flanks and table lands of all or nearly all the mountains; 3, isolated bogs, of more or less extent, scattered through the whole country. The central bogs are often very deep, being in parts from 36 to 40 feet deep, and yield peat of three kinds,—1, that from the upper layer, consisting of a light spongy mass, chiefly composed of moss, in which the vegetative structure is still more or less perfect, and the remains of heath and bog plants, and having, when air-dried, a specific gravity of about 0·300, but being sometimes as low as 0·220; 2, that from the middle layer, consisting of a more or less brown compact peat, in which the vegetable structure is more or less obliterated, and which, when air-dried, varies in density from about 0·400 at the upper part, to about 0·700 at the bottom, the average density being about 0·500; 3, that from the under layer

resting on the marl, clay, or gravel, and consisting of black compact peat, in which the vegetable structure is almost obliterated, and varying in density from 0·700 to 0·950. Generally speaking, the mountain peat belongs to the black or dense brown varieties, and has a specific gravity of from 0·600 to 0·800 when air-dried. Here and there, however, deep bogs, containing light and brown peat like the flat central bogs, are found on the table lands and in parts of mountain valleys. The peat of the isolated bogs partakes of the character of both the central and mountain bogs. Some yield more or less light peat, but generally they yield good brown or black peat.

In the deep bogs all the turf is "slane-cut," that is, it is cut off a bank in the form of bricks. When fresh cut, the average brown peat contains from 80 to 85 per cent. of water; or, in other words, fresh cut turf contains from four-fifths to five-sixths of its weight of water. The amount of water in air-dried turf varies according to its quality, age, and how stored. Out of 27 specimens of peat of different kinds and from different localities, but all from the great flat bogs, I found the amount of water to vary from 16·39 per cent. to 19·70 per cent. in 10 specimens of old wall-dried peat, and from 20·32 to 29·73 per cent. in 15 specimens of average turf in use in the country. In one specimen of turf stored under cover for three years the amount of water was only 10·44 per cent., while in another used on the Shannon steamboats it amounted to 33·27 per cent.

A good deal of black peat of wet bogs is taken up as pulp and formed into bricks. This kind of turf is called "hand" turf, and is usually very dense (from 0·700 to 0·900 or even 1·000), and contains less water when well air-dried than "slane" turf. The usual percentage of water in such turf varies from 10 to 15. The average amount of water, however, in all the turf consumed in Ireland may be taken at from 20 to 25 per cent.

The small isolated black bogs are rapidly disappearing, and in any case could not give rise to a large and steady production of fuel. It is only to the great flat bogs and to a few well situated mountain bogs that we can look for a supply of fuel to compete with coal. In estimating the cost of turf, we must accordingly base our calculations upon data obtained during operations conducted upon the flat bogs. Considering the importance of the method, it seems strange that no trustworthy estimate of the cost of producing peat in Ireland has been published, at least so far as I know. All the statements I have seen are mere guesses, and not based upon actual results. Turf being sold by measure and not by weight, the cost must necessarily vary very much, not merely on account of the price of labour, the distance carried, the scarcity or abundance of bog in the district, &c., but also and especially on account of the variation in density of turf cut even on the same bog. This is no doubt the reason why no one has undertaken the task of directly determining the cost of peat.

A few years ago I had an opportunity of determining on a great scale the relation between the volume and weight of different qualities of peat, and the cost of cutting and stacking it on the bog. The bog upon which the experiments were made was one of the deep flat bogs of the central plain. The following table contains the average results of these experiments:

	Number of Cubic Feet of air-dried Turf to a Ton.	Price of cutting and thrashing per Ton.
		s. d.
Lightest upper moss peat weighed	369·60	7 8·4
Average light moss peat -	254·20	5 4·5
Average brown peat - -	147·00	3 7·5
Compact black peat - -	131·28	2 9·
Densest peat weighed - -	99·36	2 0·84

In measuring the peat a basket locally termed a "kish," of 24 cubic feet was used, the labourers being paid at the rate of so much per kish of stacked air-dried turf Great care was taken in filling the kish so as to make it contain the same number of bricks or "sods" as would be in 24 cubic feet of a well built turf stack.

As the greatest part of the peat of the flats, and indeed of all the large bogs in Ireland available for fuel, would come under the category of "brown" peat, it may be well to give the results of two weighings, one of average upper brown turf, and the other of lower or compact brown turf. The following table contains the results:—

Quality of Turf.	Quantity of Turf weighed.	Number of Cubic Feet which it measured.	Average Number of Cubic Feet to a Ton.	Actual average Price per Ton for cutting and stacking.
	Tons.			s. d.
Average upper brown turf.	426	80,310	188	3 11
Moderately compact lower brown turf.	338	52,644	155·5	3 2·8

The average cost of about 1,000 tons of peat of all qualities cut, dried, stacked, and delivered on the margin of the bog, exclusive of the rent of the bog and some large drainage operations, was about 5*s*.

The peat or turf generally used throughout Ireland has not in practice more than one-third the heating power of good Workington or second quality Welsh coal. Some of the better qualities of peat would have a higher heating power, about 2½ tons to one ton of the same class of coal, but as usually consumed the actual heating power of almost any peat cannot be estimated at more than one-third ordinary coal. Taking the average brown peat of 147 cubic feet of stacked turf to the ton as the standard, the quantity of turf equivalent to one ton of coal would cost according to my estimate, given alone, 10*s*. 10·5*d*. But if we take the average price of all the turf cut upon the bog, the equivalent of one ton of coal delivered on the margin of the bog would be 15*s*. The experiments were made when wages were comparatively low, and under circumstances which enabled the workmen to work continuously, and in either case the cost of drainage and rent of bog were not included. It is right, however, to remark that as a bog is drained the cost of cutting diminishes and the quality improves; so also does the cost diminish and the quality improve as the upper layers of the bog are cut away.

There can be no doubt, then, that on the margin of a good deep bog the quantity of turf equivalent in heating power to one ton of coal could be obtained at a cost very much less than that at which it is likely we could ever hope to import coal. I think I may assume that under proper management, the turf equivalent of one ton of steam coal could be obtained for 10*s*. or even less, perhaps as low as 8*s*. So that if certain branches of manufacture were carried on near the margins of our deep bogs they could obtain their fuel on as economical conditions as in most parts of Great Britain. But those economical conditions cease when the turf has to be transported to a distance. As piled or stacked ordinary turf has very little more than one-third the density of coal, while it has only about one-third its heating power, it follows that the turf equivalent of one ton of good steam coal occupies nearly nine times the volume of the latter, and would consequently cost at least three times as much in carriage, even supposing that properly constructed carts capable of carrying the turf equivalent of a load of coal were employed. In practice the cost of carriage is much more.

The variation in the quality of turf which I have pointed out above has hitherto prevented farmers from determining the real cost of their fuel. If there be a peat bog on a farm and that the farmer uses the labour of himself and of his children, when not otherwise engaged in summer, in cutting turf, he will consider that his peat costs him nothing. The farmer who has not peat bog on his farm and buys his supply, carts it home himself, and as very few keep accurate accounts, he does not add the cost of his own or his horse's labour to the cost of the turf at the bog. It thus happens that many farmers continue to burn turf under the impression that it is cheaper than coal. But as the supply derived from the isolated bogs diminishes (and it is now rapidly doing so) and wages rise, farmers will soon find that unless on the margin of bogs or in very remote districts turf is dearer than coal, and the latter will be gradually substituted for the former. This substitution would be very rapid if the agriculture of the country generally improved, and this would do so, if the land laws and social relations between landlords and tenants were improved.

If any cheap effective process could be devised for compressing peat it might no doubt continue to be largely used, and form the basis of considerable inland traffic. The structure of peat, however, offers almost insurmountable difficulties in the way of its economical compression. And

no matter how compressed it may be its heating power is not much increased, so that the volume of the equivalent of one ton of coal of compressed turf would still be three or four times greater than that of coal. I have not yet seen any compressed peat produced at a cost which would enable it to compete with peat cut by the ordinary method. The problem to be solved in the compression of peat is not the production of a fancy article, but of one which can compete economically with coal, and in this sense it has not in my opinion been yet solved.

I think the legitimate conclusions deducible from the preceding facts, are—1. That the cost of turf delivered on the margin of bogs is less than that of the equivalent of coal, even under the most favourable circumstances. 2. That the cost of carriage of peat is so much higher than that of coal that the difference in favour of the former on the margin of the bogs is more than counterbalanced at even short distances from them, and that consequently, unless the country becomes waste, coal must generally supersede turf in the greater part of the country where the latter is still exclusively used, according as the population diminishes and wages rise.

I have next to consider what portions of the country use peat more or less exclusively, and the relative population, or rather the relative number of houses in the coal and peat consuming districts.

It is not easy to determine accurately the relative extent of the districts using coal and peat, because some peat is used in many coal importing localities, while a good deal of coal finds its way into the interior. Coal is chiefly used in the greater part of Londonderry, part of Tyrone, part of Antrim, Belfast, in most parts of Down, Armagh, Louth, Meath in part, Dublin (county and city), part of Wicklow, part of Wexford, City of Waterford, part of the county Waterford, City of Cork, part of the East Riding of the County of Cork, and here and there in the West Riding of the same county, the City of Limerick in part, and some districts of the county of Limerick. A part of the coal imported into the eastern ports finds its way along the canals, navigable rivers, and railways into the inland counties. From 60,000 to 80,000 tons of Irish coal are also used in the counties of Kilkenny, Queen's, Tipperary, Cork, Leitrim, Tyrone, &c. Turf is chiefly employed in the counties of Donegal, part of Tyrone, Fermanagh, Cavan, Longford, West Meath, Kildare, King's, Queen's, Leitrim, Roscommon, Sligo, Mayo, Galway, Clare, Kerry; part of Limerick, Tipperary, Carlow, Kilkenny in part, West Riding of Cork, and some districts of the East Riding; great part of Waterford, part of Wicklow, part of Antrim, part of East Meath, and part of Wexford. It is scarcely necessary to remark that in the neighbourhood of all considerable ports, and along the lines of canals and railways, as I have above observed, a little coal is always used in most of the turf-burning districts. If we take the number of inhabited houses in Ireland at 1000,000 (according to the census of 1861 the number in that year was 998,835), about 450,000 burn coal, and 550,000 burn peat. These numbers are of course only approximative; I think, however, that the number of coal-consuming houses would be found by absolute enumeration to be a maximum.

Having now considered as fully as I was able the three points, upon the study of which I rested the determination of whether coal traffic could be looked upon as a source of future goods traffic upon Irish railways, it only remains for me to show the probable increase in the importation of coal which would follow a more or less complete substitution of coal for peat, and what probability there is that this increased quantity would be carried into the interior, and to the West of Ireland by the railways.

The poorest cottier would require 15 cwts. of coal per annum; a single fire used for cooking for a small family and warming sufficiently an apartment would consume at least 23 cwts. of average coal. Considering that in large towns several families live in the same house, and that people of moderate income keep at least two fires, we may fairly assume that the minimum average consumption of coal for each house, exclusive of lime burning, malting, gas making, railways, steam boilers, &c., would be 1 ton 10 cwts. per annum. So that if coal were to completely supersede turf for domestic purposes, 825,000 tons of coal would have to be imported in addition to our present import. This, as I have said above, would be the minimum, and as the substitution of coal for peat would naturally first take place in the better classes of houses, where the consumption would be far more than the average, I have no doubt that the importation of coal will in the next ten years, if the country does not become waste, increase by at least 1,000,000 tons in consequence of the substitution of coal for peat, and the introduction of gas lighting into many towns. This is independent of any increase due to the development of manufacturing industry, and is based upon the supposition that the rates of carriage be reduced to the extent I have assumed in my calculation. If the country were really to become prosperous, and that the linen and other manufactures spread to the midland and southern counties the total import would soon reach 5,000,000 tons. But as the factories would in the first instance be chiefly established in the neighbourhood of ports, the increase due to manufacturing industry would not be directly beneficial to the railways.

From the table (p. 647) of the imports of coal into Ireland, it appears, as I have before remarked, that while the quantity imported into the eastern ports has more than doubled, that brought in by the western ports has only very slightly increased. It is also evident from that table that there is a tendency in the coal trade to concentrate in a few ports, or in other words, that the quantities imported through certain ports increase in a greater ratio than through others. Thus in 1835 the three ports of Cork, Dublin, and Belfast imported 605,864 tons, or 60·5 per cent. of the whole importation. In 1864 the same ports imported 1,502,021 tons, or 71 per cent. of the whole importation. In 1835 the following eight principal eastern ports, Cork, Waterford, Dublin, Drogheda, Dundalk, Newry, Belfast, and Londonderry imported 773,450 tons, and in 1864 1,917,124 tons, or 77·2 and 90·7 per cent. of the whole importation in each year respectively.

This concentration would become still more marked if the railways in Dublin, Cork, Belfast, and other principal ports had central railway stations connected with coal wharves. Even as it is we can see that the gradually spreading use of coal is proceeding westwards from the eastern ports, and that the limited quantities brought in through the western ports may be looked upon as the return cargoes of vessels carrying corn and other produce from the west of Ireland. The following table shows in a striking way the difference between the coal trade of the great eastern ports and the western ones.

TOTAL NUMBER of COLLIERS ENTERING the IRISH PORTS during 1864; NUMBER CLEARING with CARGOES; and NUMBER CLEARING IN BALLAST.

EASTERN PORTS.

Names of Ports.	Number clearing with Cargoes.	Number clearing in Ballast.	Total Number of Colliers.
Belfast	784	3,815	4,599
Coleraine and Portrush	28	133	161
Cork	462	990	1,452
Drogheda	43	327	370
Dublin	789	3,159	3,948
Dundalk	37	580	617
Londonderry	155	393	548
Newry	261	660	621
Ross	121	96	217
Strangford	66	383	449
Waterford	686	152	838
Wexford	348	154	502
	3,780	10,842	14,622

WESTERN PORTS.

Ballina	14	1	15
Galway	41	7	48
Limerick	157	23	180
Skibbereen	31	42	73
Sligo	36	41	77
Tralee	18	30	48
Westport	*24	—	24
	321	144	465

From this table it appears that while only 25·8 per cent. of the vessels clear with cargoes from the eastern ports, 69·0 per cent. clear from the western ports. It is true the total number of vessels entering the western ports is small in comparison with the number entering the eastern ones,

* The Parliamentary return only gives the total number of colliers, but I have learned that all are cleared with cargoes.

and that as the coal trade increases, the number of vessels clearing in ballast must necessarily increase. Nevertheless it is evident that the freights for coal to the western ports must be greatly influenced by the chance of returned cargoes, and that any great increase of coal trade through those ports would send up the freights, as there would not be a corresponding increase of export trade. If reduced rates, central stations, and coal wharves facilitate the carriage of coal to the west of Ireland, there can be no doubt that a large part, at least 40,000 tons, of the produce exported through the western ports would find its way by railway to the eastern ports.

I shall take the carriage of coal along the Great Southern and Western Railway with branches as the basis upon which to calculate the receipts of an increased coal trade of 1,000,000 tons, because that system of lines passes through an agricultural district having little or no manufactures, and therefore representing the part of Ireland in which the substitution of coal for peat is expected to take place better than a northern line. The carriage of coal as goods commenced in 1848 with 70 tons, and reached 49,392 tons in 1864, producing a revenue of 9,318*l.*, or an average of 3*s.* 9·27*d.* per ton. At 1*d.* per ton per mile this would give the average distance to which the coal was carried to be 45 miles, but as the table at p. 648 shows that the rate per ton per mile for distances under 50 miles is sensibly more than 1*d.*, the mean distance carried was perhaps not much over 40 miles. If we assume the rates for coal to be reduced to an uniform rate of ½*d.* per ton per mile, carried on an average 50 miles, which would be much below the truth if the whole of the coal to be consumed in the midland and western parts of Ireland were to be imported through the eastern ports, 1,000,000 tons of coal would produce an anuual revenue of 104,166*l.* This, however, would not be the whole profit, as ores and other goods, not now carried at all, might be brought back in the returning coal waggons.

If a great coal trade is to be developed in Ireland, depôts must be formed along the lines so as to enable the trains to carry full loads and to import the coal at the most favourable times; but I shall not discuss this branch of the subject here.

Appendix BM.

Letter from the Board of Trade, as to the Power of Parliament to revise Railway Rates and Tolls.

2506 R. Board of Trade (Railway Department),
Sir, Whitehall, 6th Jan. 1866.

The Lords of the Committee of Privy Council for Trade have had under their consideration your letter of the 13th ultimo, in which, by the direction of the Royal Commission on Railways you inquire "whether all railway com-
" panies are subject to a power, general or special, or both,
" of revising rates and tolls by Act of Parliament, and if
" not, what companies are exempt?"

You call attention to a clause (section 40.) from the 21 & 22 Vict. cap. 119., which you have appended to your letter by way of illustration.

My Lords understand the inquiry to be—not whether Parliament has power, independently of previous reservation of such power by express enactment to revise the rates and tolls of every railway company, but—whether there is in force with respect to all existing railway companies by virtue of enactment, general or special, or both, a power of compulsorily revising rates and tolls.

The only enactment relating to revision of railway rates and tolls contained in any general Act, of which my Lords are aware, is the provision for such purpose in the 1st section of the Act 7 & 8 Vict. cap. 85., intituled "An
" Act to attach certain conditions to the construction of
" future railways, authorized or to be authorized by any
" Act of the present or succeeding sessions of Parliament,
" and for other purposes in relation to railways."

Power is given by the above-mentioned clause to the Lords Commissioners of the Treasury to exercise, after a certain lapse of time and on certain conditions, an option of revising the scale of tolls, fares, and charges limited by any subsequent railway Act, with a view to reducing the divisible profits of the company concerned to the rate of ten per cent. of the paid-up capital stock of the new railway.

But in accordance with the title of the Act, that power of revision is by the 3rd section of the Act expressly declared not to be applicable to any railway made or authorized to be made by any Act previous to the session of 1844, or to any subsequent branch or extension of less than five miles in length of any such line of railway.

It appears by the report of the officers of the Railway Department to the Lords of the Committee of Privy Council for Trade for the years 1844-1845 (presented to Parliament, and a Blue Book of 1846), page xxiv., that at the end of the year 1843 there were 1,798½ miles of railway open for traffic in the United Kingdom. Other railways, or portions of railway, not then open, had been authorized previous to the session of 1844. It seems therefore to be probable that not less than 2,000 miles of the present railways in the United Kingdom are exempt in perpetuity from the option of revision by the Treasury, provided for in section 1 of the Act 7 & 8 Vict. cap. 85.

Having regard to the amalgamations, transfers, and extensions of railway undertakings which have taken place since the passing of the Act 7 & 8 Vict. cap. 85., it seems to have become a matter of much difficulty to ascertain and specify the several railways and portions of railway now exempt from revision of rates and fares under that Act, and the companies that are interested in those lines temporarily or permanently. For the most part the companies so interested are also interested in other lines that are within the provision in the 1st section of the Act 7 & 8 Vict. cap. 85.

With regard to a "special" power of revising rates and tolls, a railway company may be subject to such a power by reason of either an express or an implied reservation of the power in its special Acts.

In some cases companies in obtaining a special Act, granting them new privileges, have been subjected by an express provision in that special Act to revision of their previously authorized scale of tolls, fares, and charges.

For example—

Upon the amalgamation of the East Lancashire Railway Company with the Lancashire and Yorkshire Railway Company, by the Act 22 & 23 Vict. cap. cx. (1859), all provisions in Acts relating to either of those companies prescribing the amount of tolls, &c. were repealed (section 62); and a new scale of tolls, fares, and charges was established for the united railway (sections 63–75); and it was further provided (by section 78), that when the average divisible profits for three years should exceed eight per cent. of the paid-up capital stock, the Board of Trade may fix a new scale, so as to reduce the dividends to eight per cent., but the revised tolls, rates, and charges not to be less than those which the company were authorized to demand on 1st January 1850.

So also upon the amalgamation of the West Midland and the South Wales Railway Companies with the Great Western Railway Company in 1863, by the Acts 26 & 27 Vict. cap. cxiii. and cap. cxcviii. (1863), though no alteration appears to have been made by Parliament in the scales of tolls, fares, and charges previously authorized for the respective lines comprised in the amalgamation, it was provided in each of those Acts, that when the average divisible profits for three years should exceed six per cent. of the paid-up capital stock, the Board of Trade may fix a new scale so as to reduce the dividends to six per cent.; but the revised tolls, fares, and charges not to be less than those which the Great Western Railway Company were authorized to demand by "The Great Western Railway
" Amendment and Extensions Act, 1847."

There are perhaps some other like cases, but they can only be very few in number.

There would be, my Lords think, what may be called an *implied* reservation of power to revise a railway company's rates and tolls, if all the special Acts relating to that particular company were to contain a clause such as that appended to your letter, with verbal modifications, where necessary, accurately to adapt it to the circumstances of the case.

A standing order of the House of Commons (No. 167 of the series for the Session of 1866) has for several years past required the insertion in all railway bills passing through that House, of the following clause, viz.:—

"Nothing herein contained shall be deemed or con-
" strued to exempt the railway by this (or the said recited
" Acts) authorized to be made from the provisions of any

" general Act relating to railways now in force, or which " may hereafter pass during this or any future session of " Parliament, or from any future revision and alteration, " under the authority of Parliament, of the maximum rates " of fares and charges authorized by this Act (or the said " recited Acts.)"

The history of that standing order appears to be as follows:—

A resolution of the House, made on 26th May 1845, directed the insertion in all railway bills of a clause in the terms above quoted (100 Commons' Journals, page 497).

During the session of 1844, but not previously, the former part of the clause, viz., that relating to the operation of subsequent general railway Acts, had been inserted in the several special Acts; but so far as my Lords are aware, the latter part of the clause, viz., that relating to the revision of maximum rates, had not been inserted in any special Act prior to the session of 1845.

Another resolution of the House of Commons, to the same effect as that of 26th May 1845, was made on 2nd April 1846 (101 Commons' Journals, page 461).

Notwithstanding, in one at least of the railway Acts of 1846, to which the clause seems to have been appropriate, viz., 9 Vict. cap. xiv., enlarging the borrowing powers of the Great Western Railway Company, no such clause as that required by the resolution was inserted.

The clause was inserted, perhaps invariably, in railway Acts of the session of 1847, and by an order made on 15th July 1847 (102 Commons' Journals, page 889), it became, and it has since continued to be, one of the standing orders of the House of Commons.

It is to be observed that the terms of both the former and the latter portions of the standing order clause would require alteration in particular cases, not merely to render them appropriate, but also to give them any efficacy.

As regards more particularly the latter portion of the clause, which relates to revision of maximum rates, it frequently happens that powers of raising additional capital by shares or loan, or both, and thereby of creating new interests in existing railway undertakings, are given by an Act, which neither itself authorizes, nor recites any Act which has authorized maximum rates of fares and charges; consequently the precise terms of the standing order clause would be inappropriate.

Thus, in the case of a bill promoted by an existing railway company for power to raise additional capital for its previously authorized undertaking, and for power to another company to subscribe to that undertaking, and to create additional capital for the purpose of such subscription, but containing no recital of the previous Acts relating to the two companies respectively, it would seem that the latter portion of the standing order clause, to be duly efficacious, should be inserted in such a bill in a form altered to the following effect, viz.: " or from any future " revision or alteration, under the authority of Parliament, " of the maximum rates of fares and charges authorized by " any Act relating to the said two companies, or to either " of them."

It may be a fact that the standing order clause has, since the end of the session of 1846, been inserted in every railway Act subsequently passed, and now in force; but my Lords believe it also to be true that there are many such Acts in which the clause exists in a form which has not given to it the full efficacy requisite for the purpose of the clause in the particular case.

As regards existing railways, or portions of railways, which were authorized by Acts passed before the session of 1845, and consequently not containing the standing order clause above referred to, it may be the case that the companies in which such railways, or portions of railway, are now vested are not, as regards those parts of their undertakings, subjected by any express or implied reservation in their special Acts to a power of compulsory revision of their rates and tolls. But all the same companies may be subject to such a power in respect of other more recently authorized parts of their undertakings.

To sum up the answer to this part of the inquiry of the Royal Commission,—though there are several railway companies that may claim, on the ground of the absence of special reservation by Parliament, to be exempt from compulsory revision of their authorized rates and tolls, as regards certain parts of their undertakings, my Lords are not aware that there is any railway company that can claim on that ground to be so exempt as regards the whole of its undertaking.

The task of ascertaining and specifying the railway companies (if any) that can claim exemption, would involve a critical examination of very numerous special Acts, which the Board of Trade would not be able to undertake. My Lords trust, however, that the foregoing observations will be found by the Royal Commission to be an adequate answer to the inquiry they have desired to be addressed to this Board.

I am,
Sir,
Your obedient servant,
W. D. FANE.

William Pole, Esq.,
Secretary,
Royal Commission on Railways,
House of Lords.

APPENDIX BN.

STATEMENT of CANNOCK CHASE COLLIERY COMPANY'S WAGGONS, which have been delayed as under mentioned.

(*Alluded to by Mr. J. N. Brown, in his answer to Question* 11,124.)

Appendix BO.

Supplementary Memorandum respecting some Points in Mr. Edward J. Gibbs's Evidence.

A. The fifth proposition of the Wolverhampton Chamber of Commerce states that a fair mileage rate would be for the same classes of goods always the same. It must be remembered, however, that this proposition occurs in a memorial addressed to three railway companies occupying districts not materially different from each other, either in costliness of the roads or in population, and so much assimilated, that already they do charge identical rates wherever they compete. The proposition was not intended to apply universally, and to mean that absolutely the same rate per mile should be charged where railways run through difficult and thinly-peopled countries as where they run over level plains and through crowded districts. As a rule of universal application, the Council of the Chamber approve the proposition I laid down, viz., that there ought to be a minimum and maximum rate, of which the two extremes should be much nearer to each other than the highest and lowest rates now charged. But while this modification is admitted as a matter of principle, it must be remembered that, as a matter of fact, the irregularities complained of are not justified by any such considerations. The high charges are *not* made to pay for difficult lines, or in the less crowded districts, but quite independently of these circumstances. The lowest rates of all are given for traffic through England and Scotland.

B. I was asked whether the irregularities complained of could be said to be the result of a monopoly granted by Parliament; whether the monopoly was not the result of circumstances over which Parliament had no control. I reply—let us consider what provisions might have been made, which have not been made, by the legislature.

1. Maximum and minimum rates might have been fixed, and might have been made *subject to periodical revision.*
2. The competition of canals might have been preserved.
3. The competition of railway companies might have been made as severe as need be if existing railway companies were not allowed to oppose the grant of new lines promising lower rates.
4. The Government might be allowed to take and manage all the lines itself.
5. The Government might be allowed to take or make competing lines.

Of course I am not now recommending any of these arrangements, but the fact that they all are or have once been in the power of Parliament, proves, I think, that it is not unfair to say that the existing monopoly results from the action of the legislature.

C. It may appear singular that I should have insisted so strongly upon the importance of a minimum rate. That a *maximum* rate is necessary must, of course, be obvious to every one. Without it the public would be entirely unprotected: and if, as appears probable, that rate is too high, it is very desirable that Parliament should have power to reduce it. The injury done by having no fixed minimum is not so obvious, and it may therefore not be out of place to trace its working in one or two particulars.

1. As respects the competition of one railway company with another. At present a healthy competition, (*i.e.* one based on the endeavour to show which can do work most cheaply with a profit) never exists. Railway companies are bitter foes or bosom friends. Tens of thousands are wasted in trying to prevent the approach of a new line, and to crush it at first by prices that involve a constant loss. When peace is made the rivals endeavour to recoup themselves at the cost of the public, and they complain grievously because the losses already incurred and the diminished traffic at high rates prevent the increase of their dividends. If a minimum were fixed and were subject only to occasional revision, there would be no need for these parliamentary contests between railway companies, and the competition would never involve carrying at a loss.
2. The absence of a fixed minimum has been the means of destroying the competition between railways and canals. The canal companies can never, without such a provision, compete with the railways, because the latter make their passenger traffic pay the loss on goods. Hence all the great canals are in the hands of railway companies or have binding agreements with them. Of course it would be necessary to fix a minimum rate of tonnage for the canals as well as of mileage for the railways, but this would be decided simply by finding the lowest rate that would give a profit for the use of the waters. The canal companies are not usually carriers; and where they are, they are not the sole carriers. If the tonnage were reduced to the lowest price consistent with profit the real competition would be in the hands of private carriers, and would form a very important check on the railway system. It would no doubt be found that some goods could be carried more cheaply on canals and others on railways, and it may be predicted with certainty that lower and yet profitable rates would be established on both. The results obtained by this competition might be used to regulate the permitted rates in cases where only railways could compete.
3. If it should ever happen that a great railway company should be so over-burdened with debts and guaranteed stock and preference shares that its continued payment of dividends was becoming hopeless, it might be very advantageous, and perhaps even necessary, that the Government should purchase and work the line. But it would be hopeless to attempt this unless the stress of Government competition were limited by a fixed minimum rate.

Appendix BP.

Statement by the Grand Canal Company of Ireland.

Grand Canal Harbour, Dublin,
3rd February 1866.

Sir,

I am desired by the Board of this company, in submitting the returns forwarded for the information of the Railway Commissioners, to accompany them with a short statement, drawing the attention of the Commission to the leading facts of our case.

The position of the Grand Canal, the property of this company, is described on the accompanying map, which shows the large district of country traversed by our system, over which is carried (in and out of Dublin alone) a tonnage exceeding 300,000 tons annually, a large portion of which is imported and exported loading, exchanged direct with sea-going vessels in the extensive floating docks of the company, or carried under through-booking arrangements with the principal railway companies in England.

During the year 1865, 62,492 tons of bread-stuffs were carried over our system, and the company has maintained its position in the face of active competition, arising out of the creation of numerous other modes of transit—the result of the development of the railway system—and continues to receive a large and increasing support from the leading merchants and manufacturers of the country, so much so, that in the year 1865 a larger amount of tonnage was carried over this navigation than before the introduction of railways into Ireland.

It is obvious, therefore, that legislation of any character having for its object to enable railway companies, by pecuniary assistance, to give to the public a reduced tariff for the conveyance of goods traffic, must injuriously, and we submit unfairly, affect this company, unless they receive the same assistance coupled with the like terms. Such legislation would likewise prejudicially affect the commercial interests of the country by placing traders situated in the district traversed by such favoured railway companies, in a better position, relatively with traders in other districts, and would have the effect of unsettling the basis of commercial transactions in which the question of freight forms so important an element.

I have, &c.

Wm. Digby Cooke,
Secretary.

To
Wm. Pole, Esq.,
Secretary,
Royal Commission on Railways,
House of Lords,
Westminster (S.W.)

Appendix BQ.

Letter from the Lord Mayor of Dublin, enclosing Resolution on Irish Railway Reform.

Mansion House, Dublin,
15 February 1866.

Sir,

Herewith I have the honour to transmit for the consideration of the Royal Commission on Railways, the resolutions adopted at the meeting held here on the 2nd inst., and in conformity with resolution No. 7, to express a hope that the Royal Commissioners will be pleased to give them their kind consideration.

I have also been requested to forward a copy of the requisition presented to me, which will be found in the accompanying newspaper, and trust that, taken together with the report of the meeting, which I also send, the Royal Commissioners will consider its character as deserving being called an aggregate meeting of Ireland on the subject of railway reform for this country.

The resolutions so fully convey the opinions and wishes of the meeting that I need not trouble the Commissioners with any comment, beyond observing that the peculiar position of the Irish railways, and exceptional condition of the country lead me to hope that they will be pleased to recommend Her Majesty's Government that any measure introduced by them may be promptly applied.

I have, &c.
James Wm. Mackey, Lord Mayor,
Chairman of the meeting
on 2nd February.

Wm. Pole, Esq.,
Secretary Royal Commission on Railways,
House of Lords, Westminster.

Irish Railway Reform.

At the aggregate meeting held this day in the Round Room of the Mansion House, convened by the Right Hon. the Lord Mayor, pursuant to public requisition, and which was numerously and influentially attended, the following resolutions were passed unanimously:

The Right Hon. the Lord Mayor in the Chair.

On the motion of the Chairman, seconded by Tristram Kennedy, Esq., M.P., the following gentlemen were appointed honorary secretaries to the meeting:—

S. M. Greer, Esq. | Edward Bullen, Esq.
Professor Sullivan. | H. J. Macfarlane, Esq.

I.

Moved by Colonel Knox Gore, D.L.;
Seconded by John Barrington, D.L.; Resolved—
That in the opinion of this meeting the evidence on Irish railways taken by the Royal Commissioners, and just published by the Government, fully proves the necessity of a thorough reform of the management, and a reduction of the rates of the Irish railways, for the interest of the shareholders as well as the public.

II.

Moved by Jonathan Pim, Esq., M.P.;
Seconded by Edward Fox, Esq., J.P.; Resolved—
That the financial position of the Irish railways is such that the directors cannot be expected to carry out the necessary reduction of fares and charges advocated by this meeting on their own responsibility, and as the Royal Commissioners have not reported specially on the Irish system, and as a considerable time must elapse before the publication of their general report for the United Kingdom, we respectfully call upon the Government to take the evidence on Irish railways, as published, into their immediate consideration, with the view of bringing forward a measure this session in Parliament whereby the principles of the Railway Act of 1844 (7 & 8 Vict. c. 85), may be applied to the whole group of railways in Ireland.

III.

Moved by Captain Esmonde, M.P.;
Seconded by Joseph Boyce, Esq., D.L.; Resolved—
That while we desire to leave the Government and the Legislature perfectly free to determine in what way the principles of the Railway Act of 1844 may be applied to the Irish railways, this meeting is of opinion that no measure of railway reform would be complete which did not provide for a substantial reduction of fares and rates, and uniformity of management upon the whole Irish system.

IV.

Moved by W. H. Cogan, Esq., M.P.;
Seconded by the Mayor of Sligo; Resolved—
That in the opinion of this meeting, whatever plan may be adopted by the Legislature for railway reform, it should effectually secure the property of existing proprietors, and vested interests of every kind.

V.

Moved by Andrew M'Cullagh, Esq.;
Seconded by J. W. Naper, Esq., D.L.; Resolved—
That, considering the great benefit which all classes in this country would derive from uniformity of management and cheap fares and rates, it is the opinion of this meeting that if the Government bring forward such a measure for the reform and management of Irish railways as would meet the wants of the Irish people, whatever temporary loss the change might involve, should be made up by relieving railroads from local taxation, and by a special provision applicable to this country to supply the deficiency.

VI.

Moved by the Marquis of Clanricarde;
Seconded by John Bagwell, Esq., M.P.; Resolved—
That a memorial, embodying the principles of the foregoing resolutions, be drawn up and presented to the Government, and that we call upon all classes throughout the country generally to co-operate with us, and to petition Parliament on the subject, and that the Right Hon. the Lord Mayor, as Chairman of this meeting, be requested to sign its memorial.

VII.

Moved by H. M. D'Arcy Irvine, Esq.;
Seconded by Major Dopping Hepenstal, D.L.; Resolved—
That the resolutions adopted at this meeting, and the requisition convening it, be forwarded to the Royal Commission on Railways, with a quest that they will take into their consideration the propositions therein contained.

VIII.

Moved by Alderman L. Joynt;
Seconded by Andrew H. Bagot, Esq.; Resolved—
That the thanks of this meeting are due and hereby given to the members of the Irish railway reform committee for their exertions in bringing the question of railway reform before the country, and especially to such of them as at great inconvenience and expense attended before the Royal Commission, and gave valuable evidence, as may be seen in the blue book just published; and that they be requested to continue their labours for carrying out the objects set forth in the foregoing resolutions, and be instructed to obtain, as far as possible, the co-operation of the Peers and Irish members of Parliament for that purpose.

IX.

Moved by Dr. Peebles, Q.C., LL.D.;
Seconded by Alexander Boyle, Esq., D.L.; Resolved—
That a subscription be now entered into to defray the expenses incurred by this movement, and placed to the credit of our treasurers.

Jonathan Pim, Esq., M.P. | Edward Fox, Esq., J.P.
Alexander Boyle, Esq. | J. G. Boileau, Esq.

X.

Moved by H. R. Perry, Esq.;
Seconded by Alderman M'Cann; Resolved—
That the especial thanks of the meeting are presented to the Irish press, and particularly the Dublin journals, for the liberal and efficient aid they have afforded the cause of railway reform, and that they be requested to continue it, as essential to the good of the movement.

James W. Mackay, Lord Mayor, Chairman.
Robert Jackson, Secretary.

XI.

Moved by G. W. Slator, Esq.;
Seconded by J. G. Boileau, Esq.; Resolved—
That the Lord Mayor do leave the chair, and that John Barrington, Esq., T.C., D.L., be called thereto.

XII.

Moved by Alderman Campbell;
Seconded by Alexander Boyle, Esq.; Resolved—
That the cordial thanks of this meeting be given to the Right Honourable the Lord Mayor for the assistance he has given the movement, and for the prompt manner in which he complied with the wish of the requisitionists, and for having granted the use of the Mansion House, as well as for the urbanity and efficiency with which he presided over this great and important meeting.

XIII.

Moved by the Right Hon. the Lord Mayor;
Seconded by J. G. Boileau, Esq.; Resolved—
That the secretary, Mr. R. Jackson, is entitled to the thanks of the meeting for his zealous attention and for the assistance he has rendered the movement.

JOHN BARRINGTON, Chairman.

Mansion House,
Dublin, 2nd February 1866.

APPENDIX BR.

MEMORIALS from IRVINESTOWN, and REMARKS thereon by the IRISH NORTH-WESTERN RAILWAY.

To the Royal Commissioners on Railways in Ireland, House of Lords, London. The memorial of HENRY MERVYN D'ARCY IRVINE, Castle Irvine, Esquire.

SHOWETH,—

THAT memorialist is a large landed proprietor; is owner of the town of Irvinestown, where large weekly markets and monthly fairs are held; is proprietor of the Irvinestown corn, flour, and saw mills; is proprietor and occupier of the Irvinestown tilery, pottery, and brick works; is proprieter and occupier of the hotel, Irvinestown; is proprietor of the Lough Erne hotel, now being built for tourists; was a promoter of the Enniskillen, Bundoran, and Sligo Railway; is now a director of that company, holding a large number of shares, and being creditor to the company of a large sum of money.

That in consequence of holding these various properties, and from the nature of them, he is deeply interested in the railway communication in the district, and the mode and manner in which it is conducted. That he regrets to have to state that, in conseqnence of the manner in which the railway in this district has been conducted, that all his property has been seriously deteriorated, and a great deal of it is entirely closed and lying idle, waiting for some amendment in railway communication.

That memorialist built his flour mills on the understanding with the Londonderry and Enniskillen Company that his goods were to be carried at reasonable rates.

That memorialist had, in connexion with these mills, stores at Enniskillen, Irvinestown, Ballyshannon, Donegal, Ballintra, and Dublin. That a large and profitable business was done, but finally the rates charged by the railway company were so enormous; the supply of rolling stock so deficient—(the answer to complaints on the subject being that the company considered that it was better for them to charge high rates for the goods taken on their supply of rolling stock, than to purchase a further supply and to charge cheaper rates); the station accommodation being also wretchedly deficient; the station master so disobliging, and incompetent to keep any accounts; that memorialist, not being dependent on any profit derived from these mills, closed them, sooner than incur the vexation and annoyance he received; and also for the purpose of depriving the railway company (as the only punishment in his power to inflict) of the twentieth part of the entire receipts of their line, including both passengers and goods.

When memorialist closed his mills, the remark of the station master was—"Thank God, for he gave them more to do than the whole of them."

That memorialist has also closed his tilery and brick works, so far as not sending any brick or tiles by the Irish North-western railway. When he opened these works he advertised them, appending to the advertisement a testimonial from Sir Richard Griffiths, chairman of the Irish Public Board of Works, certifying that the clay, bricks, and tiles were of the very best possible quality, and in consequence received large and extensive orders. That, to execute these orders, he endeavoured to make traffic arrangements with the Irish North-western Company, and after much delay, succeeded so far as to exact a promise from their traffic manager, that he would be charged the same rates as charged for the Florencecourt Tilery; but on the contrary, when the tiles were sent they were charged one-fourth more; and, even then, delivered after serious delays —and, in some cases, not delivered at all. The agent appointed declined to act any longer, and he was threatened with actions.

Memorialist could enlarge on the great and many grievances to which himself and the entire district have been subjected, but considers it more satisfactory and conclusive to forward with this memorial a copy of the last half-yearly report and statement of accounts, as furnished by the directors of the Irish North-western Company to their shareholders.

This statement of accounts will show that company to be absolutely and hopelessly bankrupt and insolvent, and without the power or the means to accommodate the traffic of the country; their nett receipts being barely sufficient to pay the interest on their debentures, stock, and Government loans.

That memorialist begs to draw attention to their own statement of the supply of rolling stock, and also to the letter enclosed, from his coal agent in Londonderry, by which it will appear that they even cannot find rolling stock to carry five tons of coals.

That your memorialist has, for the last fifteen years, devoted his entire time, energy, and fortune, in the attempted improvement of the country and his property, and, in every instance, he has been thwarted by the manner in which the railways of the district are conducted.

That memorialist is well acquainted with the resources and condition of the country; that he is able to state, as a positive fact, that the statement, that there is no traffic in the country, is absolutely and positively untrue; and that the only limit to it has arisen from the railway companies themselves; and that the railways in the district have been so conducted "that as their hand has been against every man, so now every man's hand is against them."

Memorialist therefore prays that as it was thought fit and right to enforce the compulsory sales of the encumbered estates of landed proprietors, that steps may be taken of ridding us of encumbered railway proprietors, who now, injuriously to the country and uselessly to themselves, monopolize the carrying trade of this district.

HENRY MERVYN D'ARCY IRVINE.

The Royal Commission on State of Railways in Ireland, House of Lords, London. The memorial of the undersigned landowners, merchants, traders, farmers, and others, residing in the district of Irvinestown, and County of Fermanagh, showeth,—

THAT memorialists have been seriously injured in their property, trade, and business, by reason of the manner in which the railways of the district have been conducted.

That the train accommodation between Enniskillen and Dublin has been very deficient, the earliest passenger train leaving Enniskillen at 12½ p.m., whereby half of the day has been lost, and rendering it impossible to transact business in Dublin and return the same day.

That the fares on the line have been always excessive, being equal to that formerly charged by coach. That the charges for goods, cattle, and all produce, have been excessive.

Memorialists have only to refer to the half-yearly statement of accounts, as given by the directors of the Irish North-western Railway Company, to prove that the company are not in a position to properly carry on the carrying trade of the district.

Memorialists are aware that the resources and trade of the district are ample to afford sufficient traffic to a line properly conducted; and memorialists have the proof to offer that, while many carriers have failed in the district, and in Ireland, ample and great fortunes have been made by Messrs. Purcell, Bianconi, and others. Showing that, if properly conducted, railways should be remunerative to the shareholders, and advantageous to the public.

Memorialists therefore pray that steps may be taken to place the carrying trade of the districts in a right and proper condition.

43, Lower Gardiner Street, Dublin,
SIR, 22nd December 1865.

I HAVE received a letter signed H. Mervyn D'Arcy Irvine, dated Castle Irvine, 13th instant, covering two printed documents, unsigned and undated, addressed to the Royal Commission, and entitled respectively "The Memorial of the undersigned Landowners, Merchants, Traders, Farmers, and others residing in the district of Irvinestown, and county Fermanagh," and "The Memorial of Henry Mervyn D'Arcy Irvine, Castle Irvine, Esquire." In reference to the said memorials I am directed to inform you that my Board considers the statements therein contained to be so libellous and unfounded that it must decline to enter into any explanation unless the Royal Commissioners should so desire. The Board, however, begs to give an unqualified denial to the statements in question.

I have, &c.
(Signed) W. EYKELBOSCH,
Secretary.

To the Secretary,
Royal Commission on Railways,
The House of Lords, London, S.W.

APPENDIX BS.

MEMORIAL from Mr. H. M. D'ARCY IRVINE, as to the ENNISKILLEN, BUNDORAN, AND SLIGO RAILWAY.

To the Royal Commission on Railways, House of Lords, London. The memorial of HENRY MERVYN D'ARCY IRVINE, Esquire, of Castle Irvine, Irvinestown, County Fermanagh, Ireland.

SHOWETH,—

THAT memorialist was one of the promoters of the Enniskillen, Bundoran, and Sligo Railway; is now a director of that company, and is bound in a penal bond of 24,000*l.* with David M'Birney, of 18, Ashton Quay, Dublin, to the Crown for the completion of that line to Sligo.

That it will be seen by reference to the map of Ireland that the railway from Enniskillen to Sligo is a main arterial line, necessary for the traffic of the west of Ireland to the ports of Londonderry, Belfast, and Dundalk, and as such

is a legitimate and useful undertaking and on public ground, deserving of public and national support.

That memorialist undertook this project, in conjunction with the other directors, with the intention of avoiding as much as possible the errors which had to a certain extent caused railways in Ireland to be unproductive, viz :—

1st.—Parliamentary expenses.
2nd.—Excessive payments for land.
3rd.—Heavy engineering costs.
4th.—Heavy law costs.
5th.—Over payments to contractors.

That the directors succeeded so far as to avoid the two first,—the parliamentary costs being as low as the present state of railway law permits. That a great portion of the land was obtained free—a large portion for payment in shares, and the remainder for a price not excessive. With respect to the other three, the efforts of the directors have not been successful; and memorialist begs to lay before the members of the Commission his individual opinion as to the cause, and does so in the hope that some steps may be taken by Government to relieve him from those responsibilities which he now lies under, and which, under the present state of the laws affecting railways in Ireland, he is unable to do with advantage to himself or the public.

When the Enniskillen, Bundoran, and Sligo Railway was promoted, 35,000*l.* was taken in shares, and since fully paid up; and the directors afterwards advanced 32,000*l.* of their own money. It was found impossible afterwards to raise any more money, either on the security of the line, or the personal security of the directors. In fact, it was found that for various reasons there was no capital in Ireland available for making railways. That it will be seen by the last half-yearly statement of the accounts of the company, that all the money due to bankers was 874*l.*

Memorialist was one of a deputation of three directors, all men of property, who waited on the late manager of the Provincial Bank in Dublin, to request a temporary loan of 4,000*l.* for the purposes of the railway, on the joint security of the line, and personal note of the directors. That had the directors been three dogs asking a bone, they could not have been refused or treated with greater contempt.

That the Royal Banking Company were bankers to the company, that memorialist was joined with two other directors in a note to that company for 4,000*l.* for the use of the railway, and as the Royal Banking Company alleged, and our directors denied, for the further sum of 874*l.* appearing in the accounts enclosed as due to them. The Royal Banking Company applied to memorialist for payment of these two sums, none of the money being for memorialist's use; and the banking company being promised payment in a short period of the 4,000*l.*, memorialist instructed his solicitor to take such steps as would protect him until the promised payment would be made. The solicitor having taken such steps, the Royal Banking Company served memorialist with a trader debtor summons, as a brickmaker, into the Dublin Bankrupt Court. The Judge presiding ruled that memorialist should hand in a cheque for the two-thirds of the 4,000*l.*, and that the Royal Banking Company should seek their remedy at law for the 874*l.* That accordingly memorialist immediately handed in a cheque, which cheque the Royal Banking Company then refused to receive as payment, and memorialist was obliged to go to the Bank of Ireland, change the cheque, and hand in the proceeds to the Judge presiding in gold. The 874*l.* was also paid to them immediately afterwards, as likewise the balance of the 4,000*l.* The proceeding of the Royal Bank against memorialist being made public will, of course, prevent others subjecting themselves to take insult; particularly as memorialist had left, for a considerable period, the course usually pursued by landed gentlemen, and had taken a large part in business and mercantile transactions connected with his town and estate, and through large and very heavy mercantile liabilities had always retained a name for the strictest integrity and punctuality.

It was also found by the directors impossible to raise money from persons in the district, the Irish North-western Company being large borrowers of money, which has been wholly or partly lost.

Under these circumstances the directors of the company were placed in a position entirely dependent on their solicitor, engineers, and contractor, and which rendered them wholly incapable of having any control over the expenditure; and memorialist does not see how the line is to be finished, and his liability under the bond given avoided, unless at a cost which would render the railway entirely unproductive to the shareholders, and the directors who are creditors.

Memorialist has to state that he has acted for a long period as grand juror of the counties of Fermanagh and Tyrone, and for a considerable period acted as foreman of the grand jury of the county Fermanagh. That during that period he has gained a good knowledge of road-making, and of what should be the cost. That he has seen nearly every road in the two counties either made or altered, and, in Fermanagh particularly, at a cost and expense far beyond what was necessary, and in a manner equal, if not superior, to any line of railway; still at a cost not one-half of what the earthworks and masonry cost on our line of railway.

That memoralist believes the reason of such saving to be that the grand jury are in a position to pay cash, and control their officers and contractors.

That memorialist has been particular in showing there is no available capital in Ireland to make railways for cash payment, as he is aware of the theory advanced, that private capitalists should not be interfered with by the expenditure of Government capital.

Memorialist begs to express his entire disapproval of the railways of Ireland being handed over to the management of Government, any good arising from such a step being altogether contrary to his experience. He has seen the relief so handsomely granted by Parliament during the famine of 1847, and placed under the sole control of Government, so administered that not one-third part reached the poor. He has seen vast sums of money uselessly expended by the Board of Works. He has seen the Government of Ireland centralised, and the influence of men of property ignored. The Commission can now see the result.

But memorialist has seen great benefit arising from money advanced by Government, and expended in thorough drainage, the making of public roads, the building of gaols, asylums, and other works, when expended under joint government and local supervision; and he can refer to the evidence laid before various committees of the House of Commons, that such monies have been always punctually repaid in the instalments agreed on.

This line of railway is now completed to Bundoran, but is burdened with heavy liabilities to the landowners, contractors, engineer, and solicitor—rendering it hopeless for the directors to give accommodation to the public at reasonable rates. But memorialist has entered into negociations with the view of learning what arrangement could be made with these creditors, and he is enabled to state that by a cash payment a sum of at least 50,000*l.* could be made on the rate of payment as made in debentures and Lloyd's bonds—and of fully 30,000*l.* less than the cash payment rates. The contractors, Messrs. Brassy and Field, offering to take 20,000*l.* less than the cash expended by them, as shown by their books, in consideration of a cash payment to them.

Memorialist would submit that as 90,000*l.* has been raised by shares, advances of directors, and gifts of land, all of which would be charges on the line coming after any loan which Government might be induced to advance, that there would be ample security for the payment of interest and gradual repayment of such loan.

Memorialist therefore prays that such steps may be taken as will empower the Government to advance money, on fair and liberal terms, for the completion and making of railways in Ireland; thereby saving great personal loss to the directors and shareholders, and enabling them to deal with the public using their lines on reasonable terms.

Henry Mervyn D'Arcy Irvine.

Appendix BT.

Remarks by Mr. Charles Clark, of Liverpool, on Mr. Cawkwell's Evidence.

My dear Sir, 17, North Wharf, Liverpool.

Mr. Patterson has shown me the proof of Mr. Cawkwell's evidence before the Royal Commission, and as a great portion of his examination is directed to the overthrowing or weakening of the statements I made as a witness on behalf of the Liverpool traders, I venture to trouble you with a few remarks upon it.

To examine it in detail and expose its manifold inconsistencies and errors, would be a far too laborious task, and I shall confine myself to three or four points which you may probably think deserve to be cleared up. These are--

1st. The accuracy and fairness of the tables of rates given in by me to the Commission.
2nd. The cost of carting in Liverpool.
3rd. My estimated terminal charge; and
4th. The general answer of Mr. Cawkwell to the complaint from Liverpool.

First, as to the tables.

It appears to have been assumed by some of the Commissioners that there is a published table of railway rates on all goods to and from all places, so that it would be perfectly easy for any one wishing to know a particular rate between any given towns to consult this table, and ascertain the rate. This I take to be the drift of the questions numbered 11,495 to 11,499.

Nothing can be further from the fact than this. There is no such publication accessible to the public, and when the Chamber of Commerce wanted to get at the actual rates between different places, their only mode of getting the information was by asking the individual forwarders of goods to those towns for a return showing the rates they had actually paid. The tables presented by me to the Commission are compiled *bonâ fide* from the returns thus sent in by the very persons who paid the charge, and each return is authenticated by the signature of the merchant or trader making it.

If the charges authorized should turn out to be less than those actually levied upon the public, this is in itself an additional grievance, which may fairly demand the attention of the Commission. On this head I beg to remind you that since my evidence was given several of the most obnoxious rates have been reduced. I am glad to see you pressed Mr. Cawkwell on this point. He says he does not know whether the Birmingham rate, reduced in August 1865, was altered before I gave my evidence or not.

As he had my evidence in his hands to prepare his answer, it is surprising that the date, April 1865, should not have enabled him to answer your question whether these reductions have not, at least in many cases, been made since our tables were prepared and handed in.

I do not dwell upon this point to vindicate myself, but because I think it is essential to show the good faith of the Chamber in the statements it has made. I do not say there are no inaccuracies in the tables. Some I have discovered and corrected in the revised proof, some may have escaped, but on the whole I believe they will be found correct.

A much more important point is their *fairness*. This seems to be questioned in No. 11,485, and though Mr. Cawkwell does not expressly say they are unfairly drawn up, it is implied by what he states.

This requires an explanation.

The Chamber had to collect the rates by sending a circular to every member, and even to others, asking for the required information.

You know how reluctant men in business are to move in any matter which does not directly affect their interests.

Hence it happened that the returns were made mainly by those who thought they had reason to complain; those who were satisfied to let things remain as they were took no trouble about it, and of course those persons who enjoyed the preferential advantages which Mr. Cawkwell admits and alleges in answer to our complaints, were the very last men who were likely to come forward and expose a system by which they were profiting at the expense of others. So much on the point of the tables.

Secondly, as to the cost of cartage.

Mr. Cawkwell confuses "cost" with "price," two very different things. By cost of carting I mean the actual expense to the man who performs the work. What Mr. Cawkwell deals with is the price paid to other persons for undertaking to perform the work. Of course this price must include not only a profit on their capital and skill employed, but also, as their employment is a precarious one, an additional sum to cover the risk of their being unemployed. The simple fact is that the firm of which I am a member carts several thousands of tons in a year at 10*d.* per ton, and makes a profit (though a very small one) by it; and if the cost to a railway company of doing the same work would be 1*s.* 3*d.* or 1*s.* 6*d.* per ton, this is a further reason why, as we proposed to Mr. Milner Gibson last year, the option of performing it should be given to the trader, and a corresponding deduction made from the carriage charge.

Thirdly, terminal charges.

Mr. Cawkwell disputes the accuracy of my estimate, but does not give any data by which the Commission can test it for themselves. Indeed on this subject his answers appear inexplicable. He estimates (see question 11,566) the terminals on the London and North-western railway alone at *one million*.

Yet the same company return their *total traffic charges, including goods and passengers*, at 750,000*l.* As the total receipts are derived in about equal proportions from goods and passengers, it is fair to assume that this item should be equally divided between goods and passenger traffic.

Thus, if the whole cost were set down to terminals, it would only amount to one-third of Mr. Cawkwell's estimate. But, in answer 11,562, he sets down "permanent way" as one of the items of terminal charge. If the cost of making and repairing the line be in any respect a terminal charge, or, as it is defined in the Acts of Parliament, a reasonable sum for loading, unloading, and covering, and any other services incidental to the business of a carrier, what meaning is there in language?

How can the making and maintaining of the permanent way be "an incidental charge?" Is it not the very making of the line itself for the use of which the maximum tolls are specified in the Act?

But the point which I want specially to bring home is this. In his answer No. 11,478, Mr. Cawkwell accuses me of having designedly understated the terminal charge for the purpose of making the discrepancy in the mileage rates appear greater, and the fallacy of his argument does not appear to have excited the attention of the Commission.

Yet surely a very slight examination will show that the result is the very contrary of what Mr. Cawkwell assumes.

The higher the terminal charge is taken, the greater will be the discrepancy in the mileage rates, and the stronger will my case become.

I purposely took a moderate rate for terminals to avoid all appearance or suspicion of overstating my case.

Let me take a single illustration, which will exhibit the absurdity of the argument in its most striking form. Let the rate from Liverpool to Preston, 32 miles, be represented by 6*s.* 3*d.*, from Fleetwood to Preston, 20 miles, by 3*s.* 6*d.* If I take off 2*s.* from each of these sums for terminals, the nett sums will stand thus,—

From Liverpool, 32 miles - -	4*s* 3*d.*
„ Fleetwood, 20 do. - - -	1*s.* 6*d.*
Or from Liverpool per mile - -	1·59
„ Fleetwood „ - - -	0·90

But suppose now that, instead of allowing 2*s.* for terminals, I allow 3*s.*, how will the comparison stand?

From Liverpool - - 6*s.* 3*d.*, less 3*s.*, =	3*s.* 3*d.*
„ Fleetwood - - 3*s.* 6*d.*, less 3*s.*, =	6*d.*
Or, per mile from Liverpool - - -	1·22
„ Fleetwood - -	0·30

In the first case the cost per mile is as 1·59 is to ·90, or $1\frac{3}{4}$ to 1; in the second it is as 1·22 to ·30, or four to one.

So far from the discrepancy being reduced by taking a higher terminal rate, it is, in this case, more than double. Is it not abundantly clear that if you have two unequal sums, the higher the sum you deduct from each the greater will be the inequality of the remainders.

Yet Mr. Cawkwell says, I took the fixed sum low in order to increase the inequality!

One word on Mr. Cawkwell's general answer. It is that the duty of a railway company is not simply to convey traffic on the most economical terms, but that they have a right to distribute it at their discretion; to foster it where it is sluggish by offering a bounty, to curb it where it is exuberant by imposing a restriction, and generally to act as a sort of deputy Providence, assigning to each town and district such a measure of prosperity as it deems best.

I am content to rest our case upon the negative of this monstrous theory, which is again and again implied in

Mr. Cawkwell's evidence, and to ask if it is conceivable that Parliament should sanction the exercise of a power so arbitrary and irresponsible.

Should you think it desirable to tender fresh evidence on these or any other points, I shall place myself entirely at your disposal, and I have only now to beg that you will pardon the extreme length to which this letter has grown.

The magnitude of the subject, the interest you have taken in it, and the importance of exposing Mr. Cawkwell's errors of fact and argument, must plead my excuse for thus intruding upon your time.

I remain, my dear Sir,
Yours very truly,
CHARLES CLARK.

T. B. Horsfall, Esq., M.P. 24th February 1866.

APPENDIX BV.

OBSERVATIONS by the PROPRIETORS of WINGERWORTH COLLIERY, near Chesterfield, on the RAILWAY COMPANIES' WORKING of COAL TRAFFIC.

THE railway companies (almost all of them, and particularly the Midland and London and North-western) require the coal merchants or coal masters to provide waggons for the traffic; these waggons are worth to let from 4*s.* to 5*s.* per week, but the railway companies sometimes delay them five or six weeks without compensating the owners, and at other times smash them up in shunting, and refuse to pay compensation, alleging the damage to be caused by wear and tear.

Lower rates are given to large collieries for gas coals and on quantities which smaller collieries cannot raise; this is manifestly unjust to small colliery owners.

An arbitrary charge is made for siding accommodation, and signalmen's wages at some colliery junctions, while other collieries are not required to pay any expenses of this kind.

At some stations (Birmingham and Nottingham for instance), the coal wharfs are all let to a certain number of coal merchants, to whom only the coals must be consigned. This is very unfair to collieries not having introduced their coals, as they are compelled to go to some one of these merchants, who may all combine to keep a particular coal out of the market. The wharfs should be free to any one paying carriage of the coals.

Wingerworth Collieries, near Chesterfield,
17th February 1866.

APPENDIX BW.

FURTHER STATEMENT from WINGERWORTH COLLIERY, in reply to Mr. ALLPORT'S EVIDENCE.

Wingerworth Collieries, near Chesterfield,
SIR, 13th March 1866.

HAVING been furnished with a proof copy of the evidence of James Allport, Esq., given before the Railway Commission on the 1st instant, I beg, as one of the proprietors of the Wingerworth collieries, to state the following facts in reply thereto:—

1*st. As to the Construction and delay of Waggons.*

Mr. Allport admits in his reply to 13,634 and 13,694 that the coal masters are compelled to provide the waggons for their trade.

He denies that coal waggons were originally intended to carry four tons, but the Act authorizing the North Midland line running near the Wingerworth collieries expressly limited them to four tons, including the weight of the carriage. See 6 & 7 Will. 4. c. 107. s. 177., passed in 1836.

The Wingerworth collieries were opened in 1840, and their waggons were constructed to carry about four tons, and must have been approved of by the railway company, who had power by section 179 to refuse carriages which they considered objectionable. The Wingerworth Company for some years had about 300 of these small trucks, which were similar in construction to those used at the adjacent collieries at Clay Cross and Staveley; as these trucks wear out and become unfit to run they are replaced by the ordinary six-ton trucks now generally used in the coal trade.

Previous to 1863 Mr. Allport complained that these small trucks had axles of too weak a description and required us to put in stronger ones, but as the weights carried by the waggons had not increased, and as many of them were nearly worn out and not worth this extraordinary outlay, we asked to be allowed to run them short distances until they were quite worn out, when we promised to renew them according to their requirements. Mr. Allport at first declined to do this, and by letter dated 16th May 1863, wrote to us as follows:—

MIDLAND RAILWAY.

General Manager's Office, Derby,
GENTLEMEN, 15th May 1863.

REFERRING to my note of the 21st April.

I now forward you a list of your waggons, to which I must take exception, and I beg, therefore, to inform you that on and from to-morrow I cannot permit them to run until they have been supplied with the heavy description of axle which we require rolling stock working over this railway to be furnished with.

I am, &c.
Messrs. The Wingerworth Colliery Company, near Chesterfield. Pro JAMES ALLPORT, J. WHITMORE.

The Midland Company's agent at Clay Cross received instructions at the same time not to permit these waggons, 80 in number, to go on the line. As Mr. Allport denies this charge in his reply to No. 13,644, his own letter is annexed hereto.

Ultimately after repeated remonstrances Mr. Allport allowed many of these waggons to run, and some of them are yet working, and I do not recollect that one of these axles has since given way. At the time these waggons were stopped I pointed out to Mr. Allport, by letters, dated 21st April 1863 and 22nd May 1863, that the Staveley collieries were allowed to work the same description of waggons, which he did not deny, and a large number of them are still in use there, and also at other collieries in this district.

The size of the axles should depend on the load and speed, but we were never furnished with particulars of the required dimensions, nor was there any general rule or regulation as to the size of axles for small waggons of the class objected to, though there was a specification issued in 1860 for the six-ton waggons, which however has since been withdrawn, and no inspection now takes place of new waggons put on the line as stated by Mr. Allport in No. 13,666.

We complain that the regulations as to construction of waggons are uncertain and unequally and arbitrarily carried out, and we would suggest that where railway companies do not provide waggon stock they should not have the powers they now exercise when they think fit to reject particular private waggons, but that disputes of this nature should be settled by indifferent parties well acquainted with rolling stock, as was intended by the original Railway Acts.

Mr. Allport says, in his reply No. 13,646, that the Midland Company are only an hour and a half in taking coals from Clay Cross to Derby, and this may be true as to the actual time in transit, but I repeat that many waggons very frequently stand several days in sidings at Clay Cross, before the engine takes them away, and that on arrival at Derby they are again delayed there in the shunting sidings, and are not delivered in the coal wharf, at which place only they can be unloaded until two, three, or four days afterwards; the same delay takes place with many waggons in returning empty to the collieries.

The statement I gave of waggons delayed in December last in going to and returning from Derby, which Mr. Allport denies in his replies 13,647, 13,648, and 13,649, is nevertheless quite accurate; the dates are taken from books kept specially for the purpose, and can be verified on oath if required by the Commission. Similar or greater delays take place almost daily to other stations, many instances of which I could give, but I have not the same means of tracing where the time has been lost as I have at

Derby, where we employ a staff exclusively for the sale of our coals.

The delays so frequently occur in the busy season that it would be tedious for us to make complaints every time they take place. I have, however, written several times to Mr. Allport, but more frequently to Mr. Parker, the outdoor superintendent, and have also personally complained to them and to the station agent of these delays. On the 22nd November last I wrote as follows to Mr. Parker:—"Our waggons are working "very badly indeed. See the enclosed letters, showing "great delays. Please see that they are better attended "to as the waggons are of very great value to us just "now," to which Mr. Parker replied that "it should have "immediate attention." I also wrote to Mr. Allport on the 16th and 23rd November last, complaining of delays on the self-acting incline worked by the Midland Company. These letters were as follows:—"We cannot get our waggons "up and down the incline without an unnecessary waste "of time. To-day we have been laying down coals at the "pit for want of empties, and your men knew it, but "stopped for dinner two hours, when there were several "empties at the bottom of incline, which ought to have "been run up immediately they came in. It is impossible "for us to increase our trade unless better arrangements "are made for working this incline. The incline ought "to be worked continually so long as there are either "empties at the foot or loaded ones at the top of "incline."

"The incline is not yet worked satisfactorily, so much "time being lost, both with getting loaded waggons down "and empties up. As we have a capital of upwards of "60,000*l.* depending on the working of this incline, you "will excuse us urging upon you the importance, to us, "of doing all that can be done to facilitate our trade, and "and we therefore enclose you a few suggestions for "working the incline, which would, if carried out, prevent "the necessity of these repeated complaints. Your men "will probably say that some of these suggestions are "impracticable, in that case we shall be glad to try the "work for ourselves, with our own enginemen and "breaksman for a week, if you will give your man a week's "holiday while we are doing the work. We will be re-"sponsible for any damage to the waggons or machinery "while under our care. We are giving you a traffic of "70*l.* per day, and can increase it considerably if facilities "are afforded for working the incline properly. We have "above 5,000 tons of coal at the top of incline, in stock, "which we want to sell while we have a demand, but "cannot get it down." Mr. Allport acknowledged both these letters.

Mr. Allport states, in his reply No. 13,649, that "the "railway company has no control over these coal wag-"gons;" they are, however, invariably placed on the company's own sidings for unloading, and if they are delayed there more than a certain number of days, (generally two or three), the company charges 1*s.* per day, as stated in Mr. Allport's reply No. 13,684, which is inconsistent with no control, as stated in replies No. 13,649 and 13,650. The complaints we make as to delays at Derby in December, as per statement, are not, however, affected by delays in the coal wharves, the time of arrival there being considered as the time of delivery, and the delay in return of empties being counted only from the day of unloading.

Owing to these repeated delays our waggons made only an average of six trips in the months of November and December last, when all our customers were short of coals and requiring increased supplies, and when we had large stocks of coal on hand at the pits and only wanting the trucks to send it into the markets.

2nd. As to Damage to Private Stock, &c.

Mr. Allport says in his reply, No. 13,668 and 13,669, that there is an incline belonging to the Midland Company over which these waggons have to be worked; this incline is another source of delay and the cause of much damage to our waggons, the gradients are 1 in 10 over a portion of it and it is worked generally as a self acting incline, the weight of the loaded waggons bringing up the empty ones; but occasionally, when more empties are required than the loaded ones will draw up, a stationary engine is used to assist, and in doing this work, which is always performed by the Midland Company's servants, Mr. Allport admits truly that there are sudden snatches given to the load tending to break the couplings. If the company's rope or chain breaks first, as it sometimes does, they pay the damage to the waggons, though not for time lost to the owners in repairing them, but if the snatches break the couplings of the waggons (which are very often broken on the ordinary line without further damage) the company not only declines to pay, but insists on being the sole judges, and even refuses to refer the question to an indifferent person in some cases when the blame rests entirely with its own servants, who are in charge of the waggons when working on the line.

To give instances in support of these assertions I may say that on the 3rd November 1863 our waggons broke loose on the incline, one of the drawbars having given way; at the foot of the incline safety points are provided to turn the runaway waggons off the line into a heap of soil and prevent the greater damage which occurs when the waggons run into others at the foot of the incline, but on this occasion these safety points were not opened by the Midland Company's man kept for the purpose and the damage was consequently increased. I wrote to Mr. Allport stating these facts on the 13th November 1863, and offered to divide the loss with him, but he declined by letter, dated 27th November 1863, to make any compensation.

On the 8th January 1864 another accident occurred by one of the chains beeaking in going up the incline. On this occasion the side chains were not connected and the safety points were not opened at the foot of the incline, but Mr. Allport, by letter dated 29th January 1864, declined to contribute to the damage.

As these accidents occurred in my opinion by running more weight down the incline than the ropes, chains, and couplings ought to bear, I gave Mr. Allport notice, by letter dated 30th January 1864, that we should hold the Midland Company responsible for future accidents when more than four waggons were sent down at one time; but on the 24th October last, when five waggons were running down the incline, another accident took place by one of the waggons coming off the rails at the safety points and a drawbar was broken. Mr. Allport insisted that the breakage of the drawbar caused the accident, though no one could speak positively to this, and he refused, by letter of 14th November 1865, to make any compensation, notwithstanding the great weights objected to had been continued and although the waggon might have run off by inattention to the safety points. I also proposed, by letter of 9th December last, to leave this question to a third party, but no notice has been taken of this offer. So far from five waggons having been run down at our own request, as stated in reply 13,671, we expressly by letter forbid this to be done as named above.

On the 5th February last several waggons ran off the rails at these same points, which were admitted by an inspector and the station agent to be out of order, but the company say the waggon was not in gauge and decline to pay the damage.

We are now compelled to take legal steps against the Midland Company to recover the damages of the two last accidents, as they decline to refer the dispute to the judgment of two indifferent persons.

We paid for some years a separate rate of 3*d.* per ton for coals coming down this incline, and though this rate is now merged in one total sum to each station, we say that, notwithstanding Mr. Allport's assertion to the contrary in reply No. 13,679, 3*d.* is still charged for it in some of the rates. Mr. Allport's reply, 13,679, states that this incline is counted as two miles, but the actual distance is less than a mile and the traffic is worked by our own locomotive engines over one half the distance to the top of the incline. As the incline is as much a portion of the Midland Company's railway as the main line we ought not to pay more rates upon it, and particularly as the extra risk and delay to our stock by passing over it is a great annual loss to us, and does not fall on other coal masters who have not stock running on inclines.

3rd. As to unequal Rates.

Referring to Mr. Allport's reply, No. 13,675, the Midland Company did a few years ago offer very low rates for gas coals (about ½*d.* per ton per mile) to those coal masters who sent it an average distance of 60 miles over the railway, and this arrangement was beneficial only to very large collieries, and in fact enabled the Staveley Collieries to secure the trade of many gas companies in the Midland districts. Since that time the Midland Company have revised their gas rates, but Mr. Allport is in error in stating that the circular he quotes has been in existence for years, inasmuch as I have now before me an offer of reduced rates for gas coal on 26 June 1862 and one on the 16th May 1863 on minimum quantities of 1,000 tons, and I did not receive the circular he alludes to until the 21st May last, quoting rates to Nottingham, Radford, and Basford only. So long as the Midland Company can vary their rates as they think fit, they may at any time return to a larger quantity and shut out small collieries.

Reply 13,679 says, "Gas Coal generally goes in train "loads and they get it at a certain time of the year." This remark applies only to coal for large towns, as Birmingham,

the gas coal for smaller towns being required in less quantities cannot be sent in train loads. It is unfair to the public at Bromsgrove, for instance, that the gas company there should pay only 3*s.* 6*d.* per ton for carriage of 500 tons per year while 5*s.* 3*d.* per ton is charged to the public for carriage of 1,000 tons per year of ordinary coals for house and manufacturing consumption. If gas coal is carried at less rates on account of being sent in train loads or on account of it being sent at a certain time of the year, house and manufacturing coal should be carried at the same low rates when sent under the same circumstances over the same distance.

Referring again to reply 13,679 we have not been advised and are now quite unacquainted with the particulars of the rebate given upon quantities going into the Eastern Counties district, so, if we happen to sell our coals to a small dealer there who does not get the rebate we do not derive the benefit of it. We believe that if all special rates for quantities and qualities of coal were at once withdrawn the railway companies would carry increased quantities and the public would secure the benefit of extended competition.

Mr. Allport says the Wingerworth colliery is a small one, which is true, when compared with Clay Cross, Staveley, and other very large collieries, but he states there are 22,000 waggons working 200 collieries on the Midland; this gives 100 waggons to each colliery; we have about 500 private waggons and have a capital of 23,000*l.* in trucks, and give the Midland Company a traffic of about 20,000*l.* per annum, and we therefore think this rebate to the Eastern Counties district ought not to have been kept a secret from us.

I will give another instance of irregularity and unfairness in rates. For many years previous to June 1862 we supplied about 15,000 tons coals per year to the Wingerworth Iron Works, a distance of four miles from our colliery; the Midland rate to us was 9*d.* per ton. At that time the Staveley Company, five miles from the works, was offered a rate of 6*d.* per ton, and in consequence sold their coals at a less price than we could afford, and secured the contract for six months. The Midland Company, after we had complained of the Staveley rate, offered us a rate of 6*d.* per ton, but it was of no use to us when we had lost the contract; before the expiration of the Staveley supply our rate was again advanced to 9*d.* per ton. It was by mere accident that we ascertained the carriage paid by the Staveley Collieries, as the rates of other coal masters are kept back from us; this case shows the necessity of all rates being published or open to inspection by any person trading on the railway.

Mr. Allport denies, in his reply 13,674, that the rate from Clay Cross to Grantham is 5*s.* 4*d.*, while from Swinton to Grantham it is only 4*s.* 4*d.* I have before me the Midland Company's lists from each place, dated 2 March 1863, which confirms my previous statement, and, moreover, shows the rates to 43 other stations to be considerably less from Swinton than from Clay Cross though the latter place is 24 miles nearer the market.

Although there may be cases where the rates over long distances must be low to enable distant collieries to compete, I do not think it fair that collieries 24 miles farther off should have less rates by 1*s.* per ton than are given to us, while every colliery in advance of us has naturally also a less amount of carriage to pay.

4th. As to limiting the Number of Coal Traders.

Referring to the complaint as to confining the sales at Nottingham and Birmingham to merchants of the Midland Company's own choosing, Mr. Allport admits this in his reply 13,682, and gives the quantity of coals sent by us to Nottingham in December 1864 to show that we are not affected by this arrangement. I may state that the rate of 2*s.* 4*d.* per ton charged to us at Nottingham against very much lower rates to the numerous nearer collieries on the Erewash Valley Branch, and particularly against the rate of 9*d.* per ton paid by the Hucknall Company, must prevent us doing much trade there, but we are still of opinion that it is unreasonable for any railway company to limit the number of coal dealers at any station. At Birmingham one of the selected merchants is living at Wirksworth 60 miles off, while a private customer of ours there, who has bought our coals for nearly 20 years, is prohibited from receiving his supply direct from the collieries, though he invariably empties the waggons immediately they arrive in the sidings.

5th. As to Siding Accommodation.

Mr. Allport, in his reply No. 13,680, denies that the Wingerworth Company pay for siding accommodation, but it is, however, true that they are charged not only the full wages of a signalman at their Avenue colliery, who has to perform certain duties fairly chargeable to the Midland Company, but also 5 per cent. on an outlay made by the Wingerworth Company when these sidings were put in, as a fund for keeping them in repair; on the other hand at Clay Cross station very large siding accommodation has since been given to the Clay Cross Company exclusively, and a signalman provided for them without any charge whatever. I have before me letters from Mr. Allport, dated the 16th October and 14th November last, admitting these facts, but insisting on our paying for the accommodation, and I saw Mr. Allport personally on this subject on the 18th November last, when he promised to recommend his directors to relieve us from a portion of these charges, but so far from being advised of the arrangement referred to, of relieving us of half the expense of the signalman's wages, we have lately received a claim for the full amount, as per particulars annexed. We do not complain of these charges if they are reasonable, and object to them only because they are not made uniformly to all coal masters.

Midland Railway.

Private Siding Accounts.

Gentlemen, Derby, February 20, 1866.

These for charges at your siding at Avenue Colliery during 1865.

I now beg to enclose and shall feel obliged by your remitting the amount as early as convenient.

I am, &c.

Messrs. Wingerworth Coal Company. T. W. Hackett.

I hope these particulars will satisfy the Commissioners that our complaints are not groundless.

I have, &c.

The Secretary, The Royal Commission on Railways. Jno. Ward.

Appendix BX.

Statement by Mr. Milton, of the War Office, as to the Payment to Railway Companies for the Conveyance of Troops.

I am desirous of being permitted to ask the attention of the Commissioners to the rates paid by the public through army votes to the railway companies of this country for the conveyance of officers and soldiers and military horses.

1. *For Officers and Men.*

These rates are fixed by Act of Parliament (7 & 8 Vict. cap. 85. cl. 12, 1844), and are detailed in the annexed schedule A.

The rates were fixed about the years 1842-4, when the railway system was quite in its infancy, and were then considered as representing about the actual cost to the companies of conveying officers and men.

It is submitted that this basis actual cost to the company is the utmost that Government should concede. It is open to Government to take the ground that the public service should be performed free of expense by railway companies, in return for the special powers and privileges granted to them by their Acts, and on the precedent of exemption of troops from turnpike tolls, payments for ferries, bridges, canals, market dues, &c.

Taking, however, the lower ground that Government

should pay the company the amount of the actual cost of conveyance, it is submitted that the experience of 20 years (since 1844) proves that vastly lower fares than those imposed by the Act above cited will bring a profit to the railway companies.

Not to mention the fares by special excursions,* which almost startle one with their scarcely more than nominal charges, the regular services of the public trains are advertised at fares far below the terms *enacted* for the conveyance of the military.

Constantly in Ireland, and occasionally in England, we have found in our army accounts that our *imposed* rates are higher than the public fares, and we positively lose money by being *protected* by legislative enactment.

One or two instances occur to me :—

Croydon to London Bridge, Bradshaw, p. 69.

10½ miles, officers, 1*s.* 10*d.* each; soldiers, 11*d.* each.
civilians, 1*s.* 4*d.* „ ; civilians, 8*d.* „

Streatham Common to London Bridge, L., B., and South C. List, p. 48.

12½ miles, officers, 2*s.* 2*d.* each ; soldiers, 1*s.* 1*d.* each.
civilians, 1*s.* „ ; civilians, 6*d.* „

Kensington to London Bridge, L., B., and South C. List. p. 48.

16½ miles, officers, 2*s.* 10*d.* each ; soldiers, 1*s.* 5*d.* each.
civilians, 1*s.* „ ; civilians, 6*d.* „

Dublin to Oldcastle, Bradshaw, p. 220.

71 miles, officers, 11*s.* 10*d.* each ; soldiers, 5*s.* 11*d.* each.
civilians, 8*s.* „ ; civilians, 4*s.* „

Belfast to Downpatrick, Bradshaw, p. 224.

26¾ miles, officers, 4*s.* 6*d.* each ; soldiers, 2*s.* 3*d.* each.
civilians, 4*s.* „ ; civilians, 1*s.* 9*d.* „

Cork to Youghal, Bradshaw, p. 15.

27 miles, officers, 4*s.* 6*d.* each ; soldiers, 2*s.* 4*d.* each.
civilians, 3*s.* 6*d.* „ ; civilians, 2*s.* „

But the fact that our statutory rates are now vastly beyond what suffices to remunerate the railway companies is proved by the charges for ordinary excursion trains.

An excursion train left London for Liverpool by the Great Northern Railway on the 17th June 1865. It conveyed, say, 45 first-class passengers, and 884 second-class passengers. It brought them back to London on the 21st June 1865. The distance each way is 236 miles. The cost of this excursion at the advertised fares of 21*s.* and 12*s.* 6*d.* was 599*l.* 15*s.*†

Had a regiment of the same strength, 45 officers and 884 men, been conveyed to the same station, and the relieved regiment brought back four days after, the cost to army votes, at the statute or *beneficial* rates, would have been 1,915*l.* 10*s.* 8*d.*, excess 1,315*l.* 15*s.* 8*d.*; yet it is not to be doubted that the 599*l.* 15*s.* received from the excursionists paid a profit to the railway company, so that we may estimate their profit on the relief of this regiment at not less than 1,400*l.*

Again, 3,000 civilians are conveyed by the London, Brighton, and South Coast Railway from London to Portsmouth and back for 525*l.* at the advertised rate of 3*s.* 6*d.* each.

3,000 soldiers proceeding under *compulsory* or statute rates would cost army votes 2,150*l.*, or more than four times as much.

A civilian may go first-class from London and return within 8 days,—	£	s.	d.	Army votes would pay for an officer on duty, same service,—	£	s.	d.
To Aberdeen for - -	6	0	0	- -	9	1	0
„ Edinbro' - - -	5	5	0	- -	6	13	4
„ Inverness - -	6	15	0	- -	9	17	2
„ Newcastle-on-Tyne	4	0	0	- -	4	11	8
„ Cork (including steam-boat) - -	3	0	0	- -	8	11	7

I may, perhaps, add a word regarding daily and annual tickets.

From Streatham Common I go to London Bridge and return the same day for 1*s.* 6*d.* For an officer proceeding on duty, army votes would pay 4*s.* 4*d.*, or nearly three times as much.

By an annual ticket I can go to and fro (same distances) for 10*l.* A YEAR.

For an officer daily so proceeding on duty the annual cost to army votes would be 79*l.* 1*s.* 8*d.*

I submit that the above figures show that the fares payable by the public for the conveyance of officers and soldiers moving on Her Majesty's service might be reduced 50 per cent., and yet leave a profit to the railway companies, viz.,

*Officers 1*d.* a mile in lieu of 2*d.*
Soldiers ½*d.* a mile in lieu of 1*d.*

Taking our annual payments to railways as between 60,000*l.* and 80,000*l.* a year, this would be a saving of from 30,000*l.* to 40,000*l.* a year on the army alone.

2. *For Horses.*

The charges for the conveyance of military horses by railway are not fixed by Parliamentary enactment, but by agreements entered into with the chief lines of railway in 1844.

They are about equal, for a single horse, to the fares charged to the public generally, but as most of the railway companies allow a large deduction for two or more horses, being the same property, the charges for military horses moved in parties become excessive.

Thus for three horses the following are the amounts charged to the public as compared with the sums paid by army votes. I have added a column showing the cost at the rate that I would propose, viz., 2*d.* a mile.

—	3 private horses at advertised rates.			3 military horses at present rates.			3 military horses at proposed rate.		
	£	s.	d.	£	s.	d.	£	s.	d.
London to Chatham -	1	0	0	1	14	0	0	17	0
„ Dover - -	2	12	8	3	8	3	1	19	0
„ Ipswich -	2	11	0	2	19	6	1	14	0
„ Cambridge	2	3	6	2	11	6	1	9	6
„ Edinbro' -	10	0	0	15	0	0	10	0	0
„ Aldershot -	1	0	0	2	10	0	1	5	0
„ Brighton -	1	14	0	2	11	0	1	5	6
	21	1	2	30	14	3	18	10	0

I submit that it might fairly be enacted that all railways should convey military horses at 2*d.* a mile each, irrespective of the numbers conveyed or the total length of the journey.

J. MILTON,
Assistant Acct.-Gen.

War Office,
22nd March 1866.

A.

TERMS for CONVEYANCE OF MILITARY under Clause 12 of the Act 7 & 8 Vict. cap. 85.

" Not exceeding 2*d.* a mile for each commissioned officer proceeding on duty ; such officer being entitled to conveyance in a first-class carriage.

" Not exceeding 1*d.* a mile for each soldier, marine, or private of militia, or police force ; also for each wife, widow, or child above 12 years of age of a soldier, ... being conveyed in carriages which shall be provided with seats with sufficient space . . . and which shall be protected against the weather.

" Every officer conveyed shall be entitled to take with him 1 cwt. of personal luggage without extra charge, and every soldier, &c., half 1 cwt. of personal luggage without extra charge ; all excess of the above weights of personal luggage being paid for at the rate of not more than one halfpenny per lb."

TERMS for the CONVEYANCE of HORSES by Railway under arrangements with the several Railway Companies.

For any distance not exceeding 50 miles 4*d.* per mile for each horse
„ beyond 50 and not exceeding 100 miles } 3½*d.* do. do.
„ beyond 100 miles - 3*d.* do. do,

(*See* War Office Regulations for Railways, June 5th 1846, page 9.)

* *e. g.*, the conveyance of Volunteers to Brighton and back (102 miles) for 1*s.* 6*d.*, or 18*d.* against 204*d.* army votes, or 1 to 11⅓.

† The Great Western Easter excursions for this year are on just as cheap a scale—Liverpool 21*s.* and 12*s.* 6*d.*, &c., &c.

* It would be as well if these terms were amplified to include members of the civil departments of the army, in fact all who travel at the expense of army votes.

Appendix BY.

Statements in reference to Excursion Trains in Ireland.

To the Directors and Shareholders of the Great Southern and Western Railway.

Fontstown Glebe, Kildare,
February 9th, 1866.

Gentlemen,

Your Company, in the month of September last, having offered to carry parties of over 30 passengers from any station on their line to Dublin and back, at the low charge of ½*d.* the double mile, third class, ¾*d.* do., second class, and 1*d.* do. first class (these are the fares proposed by Mr. Galt for the general traffic in Ireland), with the proviso that they all went by the same train and returned by the same train, it occurred to me that an experiment might be made as to whether low fares would pay in this country.

Accordingly I organized a number of trains from different stations as given in the annexed Table, and the results are now before you, to judge whether the experiment has succeeded or not. You will bear in mind that these trains were running weekly from the same towns. I had no conception before of the number of people who had never been in a railway carriage, I am quite safe in saying two-thirds of our population. Now I hold it to be part of your business to educate, if I may so term it, this class of people to travel, by offering them every inducement to do so. I live within 30 miles of Dublin, and more than half of the excursionists from this neighbourhood had never before been in a railway carriage or in Dublin, and yet many of them went twice and three times afterwards by these excursion trains.

It may be said that only for the International Exhibition these trains would have been a failure. Undoubtedly the Exhibition has been a great inducement to many to go to Dublin; but so confident am I that periodical cheap trains would pay, that I have no objection, as an experiment, to guarantee your company a minimum of three hundred passengers, fortnightly, from the 31st of March to the 1st of November, by special cheap trains from Carlow to Dublin, calling at intermediate stations up to Newbridge, at the fares mentioned above.

Again, it is often urged that cheap trains, though apparently profitable, are really not so, as they take away a good deal from the general traffic. My answer to this is, that business men avoid cheap trains, and no luggage is allowed with these trains. But what I conceive to be the strongest argument against this fallacy is the great *increase* of excursion trains on all the English lines of railway. Surely directors and traffic managers in England would not be increasing the number of excursion trains, and, at the same time, lowering the fares by them, if they did not think they paid.

In conclusion, gentlemen, I believe you altogether overlook the fact, that in Ireland the great majority of your passengers are, and *ought to be*, Third Class. You may depend upon it they are the class that ought to be encouraged, instead of, as at present, every obstacle being thrown in their way,—the greatest obstacle of all the withholding from them the return ticket at a fare and a half. It is marvellous to me how such an injustice as this has been so long permitted to exist. The wealthy man—the man who can afford to pay—gets 25 per cent. returned to him on his double ticket fare, and the poor, hardworking farmer or peasant has to pay for the double journey without any deduction. I appeal to you to do away with this injustice. Give return tickets to your third-class passengers; attach third-class carriages to all your trains except mail trains; and give periodical cheap trains at low fares; and I venture to predict increasing receipts and rising dividends.

I remain, &c.

Richard W. Bagot, Clerk.

Tabular Return of Cheap Trains to Dublin, on the Great Southern and Western Railway, organized during the Autumn of 1865, by the Rev. R. W. Bagot.

* N.B.—The ticket fares mentioned above include collectors' commission, which varied from 1*d.* to 2*d.* per ticket.

Total number of passengers, 11,032. Total number of miles travelled over by trains carrying passengers both going and returning, 1,887, which divided into the total sum paid to Railway Company (viz., 940*l.* 6*s.* 9*d.*), gives an average of 10*s.* per mile.

On reference to the Railway Commission Blue Book just published it will be found, in reply to questions (4,653) in Mr. William Haughton's evidence, and (7,353) in Mr. Galt's evidence, they both concur in estimating the running expense per mile of a train at 2*s.* 7*d.* Mr. Forbes' reply to question (1,609) estimates it still less,—2*s.* 3*d.* Taking 2*s.* 7*d.* as a basis, it will be found that the Railway Company had 700*l.* clear profit over and above all expenses on these trains.

Great Southern and Western Railway.

Traffic Superintendent's Office,
Kingsbridge Terminus, Dublin,
5th April 1866.

Sir,

Referring to your letter of the 20th February last, covering one from the Rev. Mr. Bagot addressed to the directors of this Company, I have been instructed to forward the enclosed remarks for the information of the Commissioners, and which the directors have deemed it expedient to have prepared, in consequence of the continued publicity which Mr. Bagot is giving to the views he entertains in regard to the value, to the Company, of the running of very cheap excursion trains.

I have, &c.

Geo. Edw. Ilbery.

Wm. Pole, Esq.,
&c. &c. &c.
Railway Commission,
House of Lords,
Westminster, S.W.

Great Southern and Western Railway, Ireland.

Mr. Bagot gives the average earnings per the running mile of his excursion trains to be 10*s.*, and the cost of working them to be 2*s.* 7*d.* *per mile*. These earnings may be taken as correct, so far as the mileage of the trains *when loaded*, but as each excursion train necessitated the running of four *trains*, two loaded and two empty, the cost must be taken at 5*s.* 2*d.* for each mile the train ran *loaded*, and as in some instances two engines were required for working these trains, an additional sum should be added, say 4*d.* per mile, and this would bring the cost to be nearer 5*s.* 6*d.* per loaded mile, than 2*s.* 7*d.* as given by Mr. Bagot.

Mr. Bagot shows a profit to the company upon his 12 excursion trains of 700*l.* This supposed surplus is open to considerable reduction, as already shown, but in addition there is to be considered the interference with the ordinary traffic. For example, commencing at the minimum, an abstraction of 1 *per cent. in number*, is equal to an abstraction of 75 *per cent. in cash*, owing to the 75 *per cent.* reduction in fares. In dealing, therefore, with the excursion traffic of 12 trains, it may be fairly estimated that there

has been an abstraction of at least 10 per cent. from the ordinary trains.

	£
Gross receipts of Mr. Bagot's 12 trains -	940
Less 10 per cent. in number (1,100) abstracted from ordinary trains, and which in money represents - - - - -	376
	564
Expenses; train mileage 1,887 miles at 5*s.* 6*d.*	519
Net profit - - - -	45

Mr. Bagot appears to assume that, because at the reduced fares, certain receipts were realized for 12 excursion trains, run at a period when such traffic was most favourably influenced by unusually fine weather, together with the admitted attractions of the Dublin Exhibition, that therefore, if the same reduced fares were continued, the same results would follow throughout the year, and without so special an attraction as the Exhibition.

The various results of excursion trains have been known to the company long prior to Mr. Bagot's experience, and the company have had excursion trains producing not only 10*s.* but ranging from 10*s.* up to 3*l.* the running mile loaded, at periods of very fine weather, whereas at other periods, the trains between the same stations have ranged as low as 2*s.* the running mile loaded. Again, as regards the actual earnings taken by excursion trains at various scales of low fares, it has been ascertained on several occasions that both the up and down ordinary traffic between such stations as were served by the excursion trains decrease to an extent from 10 to 25 per cent. on the number of passengers, and from 15 to 40 per cent. in cash, not to mention the special expenses, and *risk* of *accidents* attending on all excursion trains; and, as an example, it may here be mentioned that in one instance this company had to pay upwards of 900*l.* to a passenger in one of the excursion trains, who fell into the ashpit at one of the stations, though every precaution was taken beforehand to try and prevent such an accident from occurring.

The *bonâ fide* money value of Mr. Bagot's guarantee cannot be recognized, unless accompanied by an additional covenant to the effect that the regular traffic would not be reduced by being drafted, which drafting of traffic would not alone be confined to the four stations named, but in all probability would extend to both Bagnalstown and Kilkenny and other stations south of Carlow, as well as north of Newbridge. Reducing Mr. Bagot's guarantee of 300 passengers into cash, and apportioning said 300 passengers equally, the figures would stand at 75 passengers from each of the four stations, gross amount 26*l.* 17*s.* 6*d.*, which on 112 miles from Carlow to Dublin and back produces 4*s.* 9½*d.* the running mile with loaded traffic.

As regards the statement that business men avoid cheap trains, it can never for a moment be admitted that reductions in fares from 1*d.* down to ½*d.* per mile, which is 75 per cent. (being the reduction proposed), would not attract business men, no matter whether they patronize second or third class carriages, and more particularly when (under a public notice) it became generally known that excursion trains at such fares would be periodically run during seven months.

As to the statement that the non-allowance of luggage is a further barrier to business men, it is very well known that a large majority of third class, and a considerable portion of second class passengers, have little or no luggage beyond hand articles even by the ordinary trains, and, taking luggage van accommodation as a proof of this, if every passenger had but one article of ordinary sized luggage the vans now attached to trains could not hold the extra quantity.

Dublin, 5th April 1866.

Appendix BZ.

Statement from the Irish Railway Clearing House, on the Subject of Sea Risks between Great Britain and Ireland.

Irish Railway Clearing House,
5, Kildare Street, Dublin,
5th April 1866.

Sir,

In the course of the evidence taken by the Royal Commission on Railways, attention has been drawn to the very serious risk and disadvantage sustained by railway companies consequent upon the present state of the law as to their liability for the sea portion of the journey in the conveyance of traffic booked through by them between Great Britain and Ireland.

The subject has from time to time had the anxious consideration of the carrying companies concerned, and in the expectation that it will have a place in the report of the Royal Commission, I am requested by the committee of the Irish Clearing House, representing upwards of 60 railway and steam packet companies, &c. (list enclosed) to forward for the information of the Commission, copy of a statement submitted to the Board of Trade, 5th of May last, on this question, and Draft of a Bill subsequently drawn by counsel on instructions from the clearing house committee, embodying the principle that for the water portion of the journey the liability of the railway company which books the traffic shall be the same as that of shipowners in the conveyance of traffic from port to port only.

I am further to express the earnest hope of the committee that the Royal Commissioners may in their good judgment see fit to recommend that legislative sanction may be given to some such measure as that, the draft of which I have the honour to enclose.

I am, &c.
J. W. Elwin.

W. Pole, Esq.

SEA RISK.

COPY of STATEMENT submitted to BOARD of TRADE, 5th May 1865.

The system of conveying traffic at through rates between Great Britain and Ireland affords unquestionable facilities and many other advantages to the public; tends much to develop intercourse and traffic generally between the two countries; and is certainly not without its conveniences also to the carriers thereof.

A serious drawback, however, greatly retards the extension of the system, and this the Government is asked to remedy.

It is that a railway company on either side of the channel, booking traffic at through rates to Great Britain or Ireland, as the case may be, is considered to be liable for its safe carriage throughout, to the same extent and on the same conditions as if the whole of the journey were by land.

This course of traffic doubtless did not occur to those who prepared the legal enactments regulating the liability of carriers, but it is now found that much greater freedom in meeting the public requirements would follow, were the liabilities of railway companies receiving and forwarding cross-channel traffic at through rates declared by the legislature to be the same, so far as the sea passage is concerned, as those of shipowners on traffic conveyed between port and port only.

The committee of the Irish clearing house, representing nearly 50* railway and steam packet companies, therefore, respectfully press upon the consideration of the president of the Board of Trade, that a Bill be introduced by Government into Parliament to place railway companies booking through in connexion with steam packet companies, or working their own vessels, in the same position as shipowners, as regards liability for sea risk.

The presence with the deputation from the clearing house of delegates from the Irish Steam Ship Association, to which 16 steam ship companies or owners are parties, is to testify the concurrence of that association in, and their cordial support of, these views.

The deputation would have been, moreover, accompanied by no inconsiderable number of members of both Houses of Parliament, had not the committee of the clearing house, with confidence, considered that the commercial desirability of the object sought would sufficiently commend itself to the president of the Board of Trade, without the aid of any extraneous influences.

(Signed) GEORGE HANDCOCK,
Chairman.
J. W. ELWIN,
Secretary,
Irish Clearing House.

(Draft.)

A BILL to extend some of the Provisions of the Merchants Shipping Act, 1854, to Railway (and other) Companies.

WHEREAS several railway companies in the United Kingdom of Great Britain and Ireland are now, and for some time have been, in the habit of entering into contracts for the carriage or conveyance of passengers, horses, cattle, or other animals, merchandise, goods, and chattels, from some place upon or near to the line of railway of such contracting company to an ultimate place of destination beyond the limits of the railway belonging to such contracting company, such carriage or conveyance to be partly by land and partly by sea:

And whereas the entering by said companies into such contracts has been found to afford very considerable accommodation and convenience to the public by enabling them to travel, and to send such horses, cattle, or other animals, merchandise, goods, and chattels, to such ultimate place of destination (water carriage included) without the necessity of entering into separate contracts with separate companies or persons:

And whereas doubts exist as to the exact liability of such contracting company or companies to the person or persons with whom they may have entered into any such contract as aforesaid in the event of any damage, loss, or accident being sustained by or occurring to any such passenger, horse, cattle, or other animal, merchandise, goods, or chattels, while the same respectively are being carried by sea in pursuance or fulfilment of any such contract as aforesaid:

And whereas it is expedient that such doubts should be removed:

Be it therefore enacted by the Queen's most Excellent Majesty, by and with the advice and consent of the Lords Spiritual and Temporal, and Commons, in this present Parliament assembled, and by the authority of the same, as follows:

1. From and after the passing of this Act if any railway company, incorporated by Act of Parliament, shall enter into any contract or contracts with any person or persons whomsoever, or with any corporation or body corporate, for the carriage or conveyance of any such contracting person or persons or of any other person or persons, or for the carriage or conveyance of any horse or horses, cattle or other animals or animal, merchandise, goods, or chattels, from any place or places upon or near to the line of such contracting company to an ultimate place of destination beyond the limits of the railway of such contracting company, such carriage or conveyance to be partly by land and partly by sea, and if any damage, loss, or accident whatsoever shall be sustained by or occur to any such passenger, horse or horses, cattle or other animals, merchandise, goods, or chattels, while the same or any or either of them are being carried by sea in pursuance or fulfilment of any such contract, then and in every such case the liability (if any) of any such contracting company in respect of any such damage, loss, or accident, shall in all respects be the same as would (in the absence of special contract) by law attach to any such contracting company if such company had, at the time of entering into any such contract as aforesaid, been incorporated solely for the carriage of passengers, horses, cattle, or other animals, merchandise, goods, and chattels, by sea, and being so incorporated were at the time last aforesaid the owners of the vessel or vessels, steamer or steamers, in or on board of which such damage, loss, or accident had been sustained or incurred (as such owners) had only contracted to perform the sea portion of such carriage or conveyance as aforesaid.

2. That it shall and may be lawful for any such contracting company as aforesaid to enter into all or any such special conditions or agreements in respect of the portion of any such contract to be performed *by sea* as such contracting company might at the time of entering into any such contract lawfully enter into in case such contracting company at the time last aforesaid had been incorporated solely for the carriage of passengers, horses, cattle, or other animals, merchandise, goods, and chattels, by sea, and (as such) were the owners of the vessels or vessel, steamers or steamer, by or on board of which the sea portion of any such contract should be performed.

3. That for the purposes of this Act the following sections of "The Merchants Shipping Act, 1854," shall be incorporated herewith, namely, the sections from section 502 to section 516, both inclusive.

4. That the provisions of this Act shall apply, whether the vessel or vessels, steamer or steamers, in or on board of which any such damage, loss, or accident as aforesaid, shall have been sustained or incurred, shall or shall not be the property of any such contracting company as aforesaid.

5. That nothing herein contained shall alter, modify, or in anywise affect the liability of any such contracting company as aforesaid in respect of the portion or portions of any such contract as aforesaid as shall be performed by land.

* The number of companies is now (1866) upwards of 60.

APPENDIX CA.

RULES drawn up by the CONGRESS of GERMAN RAILWAY ENGINEERS held at BERLIN in February 1850, and revised and amplified at the CONGRESS of GERMAN RAILWAY ENGINEERS held at VIENNA in May 1857, for regulating the CONSTRUCTION and WORKING of and the CONVEYANCE upon the RAILWAYS in AUSTRIA, PRUSSIA, and the GERMAN STATES according to uniform principles.*

REGULATIONS for the CONSTRUCTION of RAILWAYS and WORKING STOCK.

The Measurements are computed in English Feet.

A.—CONSTRUCTION OF RAILWAY.

1. All railways not intended to remain mere branch lines must be so constructed as to allow for laying down a double line of rails.

2. *Breadth of Roadway.*—The roadway should not be less than 24 feet 9 inches in horizontal width on railways where it is intended to lay two lines of rails; and on railways where one line of rails only is intended to be laid, the roadway should be 15 feet 6 inches in horizontal width.

3. *Gradients and Curves.*—The gradients, as a rule, should not exceed in level districts 1 in 200, in hilly districts 1 in 100, in mountainous districts 1 in 40.

4. The radius of curves should, if possible, not be less in level districts than 3,600 feet, in hilly districts than 2,000 feet. This, in special cases, may be reduced to 1,200 feet.

In mountainous districts, as a rule, the radius should not be less than 1,200 feet; in exceptional cases, however, it may be reduced to 600 feet, but not less.

Two curves bending in opposite directions should be connected by a straight portion of railway, at least of the length of a train. When gradients occur on a curved portion of railway, both should be eased as far as possible.

5. Stations should always be placed on a length of horizontal line, which in hilly districts should be at least 1,800 feet in length, and in mountainous districts at least 600 feet in length.

In both level and hilly districts there must also be at stations a portion of line perfectly straight, of not less than 600 feet in length.

6. The formation level of the railway should be so drained that the water level shall be below the point to which the most searching frost will penetrate. When necessary the water would be received into tanks excavated to this depth underground, from which it would be carried off by means of sufficient drains isolated from the foundations.

7. Below the ballasting of the road there must always be complete drainage towards the sides of the railway.

It is desirable that the outer parts of embankments should be composed of materials which allow of rapid percolation.

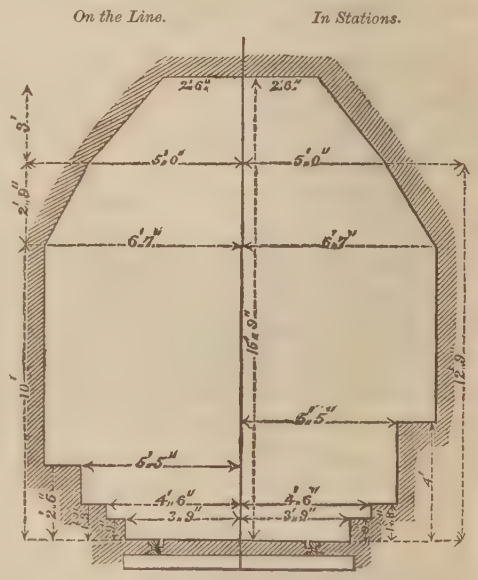
8. In laying out a railway, great attention should be given to its protection against snowdrifts.

Banks and plantations of a moderate breadth and distance from the railroad are methods found very applicable according to the locality.

9. The gauge of rails must be 4 feet 8½ inches.

10. In double lines, the centre of one line of rails should not be less than 11 feet 4 inches from the centre of the other line of rails.

11. The smallest width allowed between the rails and standing works in stations, and on other parts of the line, is shown in the accompanying sketch. *See top of next column.*



12. There must be a clear height of 15 feet 9 inches above the space between the rails.

13. The fixed portions of the spouts of the water cranes sha be at least 9 feet 4 inches above the top of the rails.

14. The rails should consist of approved iron, and, as a rule, each rail should not be less than 18 feet long.

15. The top of the flange of the rails should not be less than 2¼ inches broad, and should have a curved surface, the radius of which should be between 5 and 7 inches.

16. The height of the rails should not be less than 4½ inches.

17. The heaviest weight which any one wheel of a carriage should place upon a rail should not exceed 130 Zoll. centners (128 cwts).

18. The rails should be inclined inwards, with an inclination of $\frac{1}{20}$ of the height of the rail.

19. The surfaces of both rails of a line should on straight portions of line be on a level.

On curves the super-elevation of the outer rail should be so adjusted with reference to the speed of the train as to prevent the rim of the rail from being damaged by the revolutions of the wheel.

20. In curves of more than 2,000 feet in diameter there must be no enlargement of the gauge.

In sharp curves one inch must be the extent of the enlargement.

21. The ends of the rails must be cut square and even, so as to butt well at the joints.

22. The fastenings of the rails are to rest either in chairs, or, where broad-based (contractor's) rails are used, on flat supports.

23. The joints of the rails of a line should, as a rule, be laid opposite one another.

24. The fastenings of the joints must allow for variations in the temperature.

The fastening of joints of broad-based rails by means of dog-spikes or wood-screws ought not to be adopted on main lines.

25. For fastening broad-based rails at the joints, a fish-plate with four screw bolts is recommended.

26. The fish-joint is also recommended for double-headed rails fitted to chairs.

27. The best supports for rails are of wood, permeated by a substance which protects it from decay.

28. The system of cross sleepers is absolutely to be preferred to that of longitudinal sleepers.

29. Those sleepers placed under the joints of the rails should be of a greater width than intermediate sleepers.

30. Those sleepers next to the joint sleepers should be placed so near to them as to afford at all times a complete support.

31. Where, in exceptional cases, longitudinal sleepers are made use of, they should be tied to the adjacent

* Reprinted from the Appendix to Capt. Galton's "Report to the Lords of the Committee of Privy Council for Trade and Foreign Plantations of the Proceedings of the Department relating to Railways for the Year 1857."

sleepers, at least at the joints, so that the gauge may not alter.

32. Stone blocks are only admissible in new lines, in cuttings.

33. Stone blocks are to be placed on embankments only when the embankments have been in use for five years.

34. In slight curves, such as of 2,500 feet, the stone blocks under the joints of adjacent rails, and in the middle of the rail, must be fastened to each other by ties to prevent any variation in the gauge.

In flatter curves and straight lines this fastening is not necessary, if the ballast is firm, plentiful, and well packed.

35. Between the stone blocks and the rails there should be some elastic material which may be depended upon for preserving its elasticity.

36. The ballast ought to be at least eight inches thick under the sleepers, as well as under stone blocks,

37. The ballast should be of such a quality as neither to be thoroughly soaked by a continuance of damp, nor yet destroyed by frost.

38. Bridges should, except when very much on the skew, be of stone or of good bricks. These materials are preferable to all others.

39. Wooden bridges are not allowed. In iron bridges those portions of the roadway of the bridge to be run over by trains must consist of rolled or hammered iron.

40. *Level Crossings.*—The angles at which roads cross the railway must not be less than 30 degrees.

41. For level crossings of roads the channel for the flange should be 2⅜ inches broad and at least 1½ inch deep. No portion of the road between the rails should project above this channel.

42. These channels are to be so constructed that cattle should not entangle their hoofs in them.

43. Level crossings of high roads should be of such a width that the waggons and the team may be in a straight line and on a level before the draught animals attached to the pole reach the rails.

44. The filling in between the rails must be level.

45. At level crossings and in stations the introduction of what are called *safety rails* is inadmissible.

46. Railways are to be provided with distance posts: 100 of such posts making one mile (German).

47. Every change in the inclination of the road is to be designated by gradient indicators.

B.—STATIONS.

48. If two lines under a different management meet together, and a complete junction is impossible, the stations should be placed near together and on similar levels.

Between both these termini, especially between the goods station, convenient junction rails should be laid down. A deviation from this rule militates against the object of railways.

49. Where branch lines separate from main lines, a station common to the main and branch lines is peculiarly desirable.

As a rule it would be well to arrange that the station should be placed between the two lines, and that the platforms on either side should have direct communication with one another.

The roofing over of the platform, or the erection of porches there, is urgently recommended.

50. Principal stations are to be avoided as much as possible. This applies to joint stations as well as to stations at junctions.

51. There are three desiderata for intermediate stations:—

(*a.*) Trains running in opposite directions should be able to be turned out of each other's way.

(*b.*) Trains which do not stop should be able to run through the station without danger at a speed of 20 feet in the second (14 English miles per hour).

(*c.*) Trains should never be unnecessarily turned through facing points and cross-over roads.

These requirements can only be completely carried out upon lines which have a double line of rails.

On single lines points and crossings should only be placed where necessary to allow one train to pass another, and then should be passed over by only one of the trains in question.

The intermediate stations should in all cases be arranged as for a double line.

52. There should be at every intermediate station besides the main lines of rails at least a third and room for a fourth line of rails.

53. The drainage of stations on the level ground can only be accomplished by means of subterraneous channels. At all events, the question of drainage and of deep channels out of the reach of the rails should be a subject for consideration.

54. The stations should be enclosed, but a means of exit from the platform must be provided.

55. In stations the rail may be crossed without danger when the train is stopping.

56. In the more important stations those departments which pertain to passenger traffic should be separated from those which pertain to goods and merchandise.

There is a distinct service of trains for passengers and goods both in arriving and departing. It is, however, to be so arranged that a general superintendence is not to be lost sight of, and that the service of mixed trains be worked without any great waste of time and labour. Arrangements which tend to expedite the transmission and forwarding of goods by mail trains are desirable.

57. The smallest distance from centre to centre of the lines ought not to be less than 14 feet; 12 feet, however, has been permitted.

58. *Sidings.*—Where very long trains are in the habit of passing one another the sidings may be placed outside the station.

59. All cross-over roads, or switches leading into sidings crossed over by whole trains, should be laid down with radii of not less than 600 feet. It is desirable that in the case of facing points at stations for through trains the radii should be 1,000 feet.

Where S curves occur there should be a straight line between the curves.

60. The raising of the outer rail in the curves in sidings is not necessary.

The gauge in curves may be widened to the amount of one inch.

61. Self-acting points may be used in places passed over by whole trains; they must, however, be placed under special surveillance.

62. For switches and points, those with moveable tongues are the best. The heads of the tongues must be at least four inches deep, and so made that the inner side of the rim of the wheel can never disturb the tongues.

63. Switches with moveable rails (called contractor's points) should not be used in lines over which through trains run.

64. Three throw switches on a main line are to be avoided.

65. *Facing Points* on lines traversed by trains are to be as few in number as possible.

66. *Turn-tables and Sliding Platforms.*—In all engine stations at least one turn-table is necessary; this must be large enough to allow the engine and tender coupled together to be turned round, for which purpose at least 38 feet are required.

67. The main bearer of a turn-table for engines should be constructed of hammered iron.

68. Sliding platforms for engines should be constructed of hammered iron.

Wooden sliding platforms are permissible; the pit should not be more than 18 inches deep.

69. Turn-tables and sliding platforms with depressed rails are not allowable on lines traversed by trains.

70. High platforms are no longer to be erected.

71. The height of the platform should not exceed 18 inches, so that the axles can be greased and looked to.

72. If the carriages have well-arranged steps, there need not be any platforms at small stations and stopping places.

73. Wherever trains stop there should be, near the platform, water-closets and urinals conspicuously indicated; in cleaning them great care should be exercised. An uninterrupted flow of water in the urinals is to be recommended.

Passenger Stations.—There should be roofed-in buildings for the accommodation of passenger trains, both arriving and departing.

In these stations, three, or still better, four or five lines of rails should be laid down, so that reserve carriages or other carriages prepared to start may be in readiness.

74. *Station Accommodation for the Public.*—In the passenger stations the following accommodation is requisite.

A roomy entrance hall opening to the street; this hall should communicate with the ticket and luggage offices, and with at least two waiting and refreshment rooms. In the building there should also be an office for the station superintendent, a telegraph office, and a room for the guards. The waiting rooms and the lug-

gage offices must have a direct communication with the departure platform.

In the building itself, or in its immediate neighbourhood, water-closets should be erected.

75. The platforms in the stations are to be at least 18 feet broad.

If there be any pillars, these pillars should be at least 9 feet 5 inches from the nearest line of rails. On the arrival side of the station there should be the office for the delivery of baggage, and, if necessary, the custom house examination department. On this side covered waiting rooms are necessary.

76. Covered platforms adjoining the station serve for other arrangements.

77. The name of the station should be painted in large capital letters, which can be seen from the platform.

It is convenient also that the distance from the nearest important station should be also distinctly painted up.

78. The clocks of important stations must be visible from the roads leading to the station, and also from trains as they stop.

79. In every station there should be a place adapted for the safe keeping of a fire engine.

80. In every station where there is but one watering tank, a cistern for reserve water should be provided for special requirements.

81. The water pipes from the water cisterns to the water crane should be at least 6 inches in diameter.

82. The water should be always able to be drained from the waste pipes.

83. The pit to receive the ashes of engines is to be so situated on main lines that the work of clearing out can be done whilst the engine is taking in water and fuel.

84. Docks for cattle and carriages should be constructed with ramps of an inclination of 1 in 12, and so placed that the trucks can be laden either on the sides or at the ends.

85. *Locomotive Sheds.*—Locomotives in use must be separated from those not in use. Each engine should be so placed that access can be had to all sides, and the shed should be lighted with large windows down to the ground. Between the rails pits 2½ to 3¾ feet deep are to be sunk, with steps at each end; these pits are to be properly drained.

86. One doorway should be supplied, at least 15 feet 9 inches high and 11 feet wide, for every two engines at least.

87. Well-drained ashpits should be placed in front of the shops for engines in use.

88. There should be in the sheds a tank for warm water about 17 feet above the ground, which should be capable of being put in connexion with the engines by means of a moveable tube.

Water cranes between every two doors, either in the building or outside, are desirable.

89. Wooden parts of the roof above the place occupied by the chimney must be at least 19 feet above the rails.

90. Openings or windows in the roof must be provided for the escape of smoke.

91. If the locomotive shed is not near a repairing shop, there must be joined to it a smith's shop and store for iron, oil, and other materials, as well as a room for the engine-driver and stoker.

92. Sheds for passenger carriages must be so placed and arranged that the trains can be made up from them with as little trouble and shunting as possible.

93. The distance of the rails from centre to centre should not be less than 14½ feet.

94. The width of the doors should not be less than 11 feet, and the height than 13 feet.

95. The most convenient form for goods sheds in roadside stations is a long building, on one side of which lies the railway, and on the other a passage. Doors are provided on both sides, and in the centre is a raised platform of the height of the floor of the waggons to be loaded.

96. Cranes for heavy goods are desirable, both fixed cranes and cranes constructed to move on wheels.

97. Near goods sheds standards should be placed to show the maximum height of loads.

98. At every principal and terminal station there should be weigh-bridges capable of weighing both railway waggons and ordinary waggons.

99. *Repairing Shops.*—The principal repairing shop should be of such capacity, and be supplied with such machinery, as to be capable of at least providing rapidly for the ordinary repairs of engines, carriages, and waggons.

In new stations arrangements should be made to permit of the future expansion of the several parts.

It is desirable that the arrangements should admit of driving wheels being easily fitted to the axles, and that the loads on each wheel should be capable of being measured.

C.—Locomotives.

100. Locomotives with outside horizontal cylinders and straight axles are preferred at present.

101. For engines upon axles attached to the framing the base should be as follows:—

Upon railways with curves of	1,000	feet radius	- 11 feet.
,, ,,	1,500	,,	- 13 feet.
,, ,,	2,000	,,	- 15 feet.

This distance must not be exceeded.

102. Locomotives with axles fixed to the framing are preferred.

Coupled wheels must have flanges.

103. On railways with curves of less than 1,000 feet radius engines on moveable bogie frames are desirable.

On these engines coupled wheels should have flanges.

104. The greatest weight on any one axle should not exceed 260 Zoll. centners (256 cwts.), including the weight of the axle.

105. The weight on the leading axle should preponderate. With a passenger engine on six wheels the weight on the leading axle should be at least one-third of the whole weight of the engine. If the driving wheels are on the trailing axle, the weight on it must at least be one-fifth the weight of the engine. With coupled engines the weight should be equally divided between the coupled wheels.

106. In supporting the engine it is desirable to adopt such a system of springs and balance levers as will ensure its being supported on three points.

107. The whole of the wheel of an engine, except the nave, should be made of the best malleable iron. Naves of good malleable iron are desirable.

108. The play for the flange should not be less than ⅜ of an inch or exceed 1 inch.

109. The clear interval between the wheels should be 4 feet 5½ in width. A variation of ⅛ inch over or under is allowable.

110. The flange should not project more than 1¼ inches below the top of the rail.

111. The tyre should not be more than 6 inches, or less than 5¼ inches broad.

112. Locomotives for goods trains intended to travel about 16 miles an hour should have coupled driving wheels of at least 4 feet in diameter.

113. Locomotives for passenger trains and mixed trains intended to travel from 25 to 33 miles per hour should have driving wheels of at least 5 feet in diameter.

114. Locomotives for express trains which travel at least 40 miles per hour should have driving wheels of 6 feet radius. The other wheels of engines should not be less than 3 feet in diameter.

115. The boiler of a locomotive should be placed as low as possible. The pressure in the boiler is from 5½ to 7 atmospheres. The boiler should be proved with water to 1½ times this pressure, and show no change of form.

116. The boiler must in the first instance be proved before it is used, and again when the engine has run 50,000 miles; afterwards, whenever it comes in for extensive repairs, or whenever it has run 40,000 miles. It should be proved at all events once in three years.

117. If a boiler, after the pressure has been applied, does not resume its original form, it must not continue to be used.

118. At every proof of the boiler the weight on the safety valves should also be proved.

119. Every locomotive engine should have at least two safety valves.

120. The safety valves must be held down by a spring balance attached to a lever. The spring balance must be regulated to the permitted pressure per square inch, and must be so arranged that the valve shall have a vertical movement of ⅛ inch. Safety valves regulated by weights are permitted.

121. Every locomotive should be fitted with variable expansion gear.

122. *Steam Gauge.*—In order to be able to note the variations of the pressure of steam in the boiler, every locomotive should be fitted with the best possible pressure gauge.

123. *Water Gauge.*—The boiler should be provided with a glass tube gauge to show the height of water in the boiler, and also with three cocks at different heights, the lowest of which should be four inches above the highest part of the fire-box.

124. The boiler is to be fitted with a sufficiently large steam pump.

125. Every engine should have one pipe for warm water, which must be in connexion with the suction pipe from the tender.

126. Every engine should be provided with a powerful steam whistle.

127. An ash-pan must be placed under the fire-box, the front of which, as well as, when desired, the hinder end, should have a moveable flap capable of being closed and opened by the driver. The lowest part of the ash-pan should be at least 5 inches above the surface of the rails.

128. The question as to whether the chimney is or is not to be covered with an apparatus to catch the sparks depends on what fuel is used. With wood and turf Klein's arrangement is preferable.

129. The buffer beam of the engine should be furnished with two elastic buffers, between which should be placed a strong hook and shackle; all of which should be in accordance with those provided on the carriages and waggons.

130. To attach the engine to the tender, besides a strong coupling under the footplate, two reserve chains should be provided, which would come into play only when the main coupling broke.

131. Every engine should have on each side, in front of the leading wheels, strong life guards, the points of which should be from 2 to 2½ inches above the rails.

132. In front of every engine there must be ledges for fixing at least two lanterns.

133. The breadth of an engine should never exceed 10 feet.

134. The top of chimney should not be more than 15 feet from the surface of the rails.

135. Tenders with six wheels are preferable to those with four wheels; the tank should be attached so firmly to the framing that a heavy blow would not separate them.

136. The distance between the axles of the tender should be analogous to that of the locomotive. An apportionment of the weight on the several axles by means of balance beams is especially desirable.

137. The wheels should not be less than 3 feet in diameter, and should all be provided with flanges.

138. The wheels of the tender should be constructed and fitted equally as strongly as wheels of locomotives.

139. The tender should be provided with powerful breaks.

140. The front of the tender is provided with small elastic buffers, which abut against the engine and secure the coupling.

The hinder end is provided with spring or india-rubber buffers, and a spring draw-bar.

141. The buffer and draw-bar and chains should be so placed as to suit those on the carriages and waggons.

142. At the rear side of the tender supports for lanterns should be placed.

143. The tender should not exceed 9 feet in breadth, and the maximum height of the tank over the rails is 8 feet.

144. *All screws* on the locomotive tenders and other vehicles *must fit Whitworth's worm.*

145. The least permitted thickness of tyres for wheels of engine and tender is ⅞ of an inch, to be measured at the part where the rail impinges on the tyre.

D.—Carriages and Waggons.

146. It is generally desirable for the distance between the axles of carriages and waggons to be as long as the circumstances will allow.

With vehicles with more than four wheels and with fixed axles the maximum length should be as follows:—

On curves of 1,000 feet radius, the wheel base should not exceed 12 feet.
" 1,500 " 15 "
" 2,000 " 18 "

When the vehicles are so constructed as to allow of a play or movement in the centre or end axles, the wheel base may be extended to 25 feet.

147. The wheels must be firmly fixed on the axles opposite to each other.

148. The tyres should be coned to an inclination of at least $\frac{1}{20}$ of an inch.

149. The tyres should not be less than 5 inches, and not exceed 6 inches in breadth.

150. Three-quarters of an inch is the smallest permissible thickness of iron tyres, measured at the part where the tyre rests upon the rail.

151. The play for the flanges should not be less than ⅜ of an inch, and in no case exceed 1 inch.

152. The clear width between the wheels should be 4 feet 5½ inches. A variation of ⅛ of an inch from this is permissible.

153. The height of the flange, measured from the surface of the rails, should not exceed 1¼ inches.

154. Wrought-iron wheels with rolled and welded tyres and strong felloes, and with naves either of cats or wrought iron, are in use.

The best form of wheel has not yet been decided upon, but long naves are especially desirable.

155. Sufficient experience has not yet been had of cast-iron wheels to decide whether they should be adopted or rejected.

156. The diameter of wheels of carriages and waggons should be at least 3 feet.

157. It is recognized to be necessary to increase the strength of the axles, and to apportion the weight to the dimensions. With axles of the best iron the minimum diameter in the nave should be,

4 inches diameter for 75 centners gross weight.
4½ " 100 "
5 " 130 "

158. Sufficient experience has not yet been acquired in regard to the dimensions of steel axles, or of hollow axles.

159. A judicious length for the axles between the centres of the journals is 6 feet 5 inches to 6 feet 6 inches.

160. The strength of the journal is especially to be considered with reference to the load.

The smallest diameter of the axle at the journal
For 75 centners should be 2¾ inches.
" 100 " 3 "
" 130 " 3¼ "

Long journals are desirable, the length should not be less than 5 inches and not exceeding 8 inches.

161. Springs on railway vehicles may either be of steel or india-rubber. Steel springs should be of plates not exceeding ½ inch in thickness, and for passenger carriages they should be 5 feet long, and for goods waggons 3½ feet long. It would be desirable that the springs should be connected by balance beams. The play of the springs between loaded and unloaded waggons should not be less than 2 inches or more than 4 inches.

162. The best breaks are screw breaks, the blocks of which are arranged to press horizontally against both sides of both wheels of one axle.

163. The lever is to be of such power that the revolution of the wheels of a loaded waggon could be checked.

164. The lowest part of the break block shall be at least 5 inches above the surface of the rail.

165. For greasing the axles the general adoption of good lubricating oil is a desideratum.

166. The under framing of all vehicles should be so constructed as not to be liable to be disturbed without great force is used.

167. Complete draw-bars and buffers with steel or india-rubber springs should be fixed to both ends of every vehicle.

168. Besides the draw-bar, every vehicle should have two chains.

169. The normal height of the centre of the buffers above the rails should be 3 feet 5 inches.

With empty vehicles, the centre of the buffer should rise 1 inch above this height, and with full vehicles it should sink 4 inches below it.

170. The centres of the two buffers at the end of a vehicle should be 5 feet 9 inches apart.

171. The head of the buffer when pressed home should be at least 14½ inches from the buffer beam.

The surface of the buffer should be flat on the left side looking from the vehicles and rounded on the right side.

172. The diameter of the buffers should be at least 14 inches, and the projection of the rounded buffers in the centre should be at least 1 inch.

173. On railways with sharp curves it is to be desired that the adjacent buffers in a carriage should be connected together by means of a compensating lever.

174. The hook of the draw-bar when not extended should be 14½ inches from the head of the buffer in its normal position.

Variations of ½ an inch above or below these dimensions are allowable.

175. The distance between the side chains should be 3 feet 6 inches.

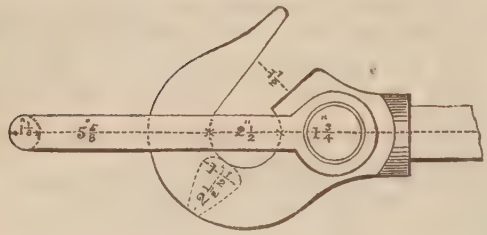
The side chains, the draw-bar, and the buffers should all be in the same horizontal line.

176. The hook of the side chains when extended should reach at least 12 inches beyond the buffers, and should be so constructed that in a loaded waggon when hanging down it should be 2 inches above the surface of the rails.

It is to be desired that washers of india-rubber should be placed between the fastenings of the side chains and the buffer beam.

Hook for Coupling Chain.

Hook for Drawbar.



177. Carriages for passenger traffic, mails, and luggage vans should be provided with screw couplings.

Screw couplings are very desirable in goods waggons.

In every case a coupling chain should be placed at each end of the vehicles.

178. Arrangements for separating the vehicles from each other when in motion are undesirable.

179. The greatest breadth to be allowed for passenger carriages is 8 feet 7 inches for the body, and 10 feet for the steps and projecting parts.

Goods waggons, including the steps and framing, should not exceed 7 feet in breadth.

180. The highest part of the framing of a vehicle should not be more than 12 feet 4 inches above the rails.

181. In vehicles with a seat for a guard (Schaffner) on the top, the footboard of the seat should not be more than 9 feet 4 inches above the rails.

182. In eight-wheeled vehicles, supported on trucks, at each end of which the framing moves round a pivot, the motion round the pivot should not be more than is absolutely necessary for passing the sharpest curves.

E.—SIGNALS.

183. Every railway, whether the line be double or single, should have an electro-magnetic telegraph for corresponding between the stations.

It is to be desired that the stations should be furnished with telegraphic bells for working the trains.

184. It is desirable also to make arrangements for telegraphing from the stations to intermediate points on the railway.

185. Besides the electro-magnetic signals, optical signals are necessary.

186. The necessary signals are—

1. Signals on the railway.
2. Signals between the staff of the line and the staff of the trains.
3. Signals between the persons forming the staff of the trains.

187. On the railway the following signals are to be given:—

1. *A train has left one station to go to another station.*
2. *An assistant engine is required.*
3. *The train should go slowly.*
4. *The train should stop.*

188. When points are situated on a main line the engine-driver when travelling to meet the points should be made aware of their position at 500 feet distance. The signals for this purpose must be moved by the same movement as the switch tongues, and it is desirable that the signal should be as visible by night as by day.*

189. The position of the feed pipe of water cranes should be made visible in the dark.

190. The following signals must be capable of being given by the train:—

1. *An extra train or an engine is to follow.*
2. *An extra train or an engine is coming in the opposite direction.*

191. The staff of the train should be able to give the following signals,—

The engine-driver should give the signals.

1. *Attention.*
2. *Put on the breaks.*
3. *Take off the breaks.*

The officials on the train should be able to give the signal "*attention*" to the engine-driver.

192. Optical signals given at night should be white, red, or green, and placed at such distances as to be easily seen.

The signal men, engine-drivers, and conductors of trains should be provided with explosive signals.

193. The engine-driver gives signals with the steam whistle.

194. In all trains the conductor and at least one breaksman, who must not be placed in the fore part of the train, should have a communication with the engine-driver by means of a cord led either to the steam whistle or to a bell. In passenger trains the signal line *must* pass over the whole train. In goods trains it is desirable that it should do so.

195. Where a train carries a signal to communicate that an extra train will follow, the engine-driver must give the particulars by word of mouth, or by a written communication to the chief authority at each station at which he stops.

196. At the back of each train travelling in the dark a clear light should be placed; a light should also be placed in front so as to be visible to the engine-driver and to the staff of the train.

197. Before an extra train is allowed to leave a station on a single line, it must be telegraphed to the next station, and a reply be received from the station-master that the train may proceed.

* The annexed sketch shows the form of signal at points and switches in use on Austrian railways. It consists of a disc 1 foot 6 inches in diameter upon an iron standard about 5 feet high. In the centre of the disc is a lamp for use at night, in front of which a reflector is placed, which conceals the direct view of the light, but reflects the light on the disc.

AA. Reflectors.

B. Glass door for inserting Light.

The Rod is connected with and turns with the movement of the Switch Handle.

REGULATIONS providing for the SAFE WORKING of the RAILWAYS.

A.—CONDITION OF THE LINE.

1. Points, of the class termed in England contractors' points, on the main line or principal sidings are forbidden. Arrangements are to be made at places away from stations for the actual state of the switches and points to be visible at a distance of 1,000 feet. Such points, when not guarded, must be locked in position. The signal must be moved by the mechanism that closes the points.

2. Turn-tables and traversing platforms are forbidden on the main line.

3. Except at crossings and in stations, the use of check rails (called *safety rails*) is forbidden.

4. The road must be fenced wherever it is not habitually watched, to prevent men and cattle from entering upon it.

5. Level crossings should be provided with conspicuous barriers placed at least 12 feet from the centre

of the nearest line of rails. Fences are desirable between the railway and roads close to it, either on the same level or above. Ditches, with a bank of earth on the side, answer this purpose.

6. On roads little frequented, the barriers may be constructed to be opened and shut by the persons using them.

7. The watchmen, under whom they are, must not be placed more than 1,800 feet from them, and must be able to overlook the crossing.

8. At each of these crossings one bell is enough.

9. The road over these crossings must be lighted after dark, at the times when the trains pass.

10. The barrier at the latter crossings must be capable of being easily opened and closed by hand.

11. Level crossings of chaussées, and roads of large traffic, must be lighted after dark. Stations must be lighted up from half an hour before until after the passage of a train.

12. In forests, a space of 70 feet with fir, and 48 feet with other wood, should be cleared on each side of the railway.

In all fir plantations a space should be kept clear as a protection against conflagration.

13. In parts of the line away from stations no object under 1 foot in height above the rail may be placed nearer to the centre of the adjacent rail than $5\frac{1}{2}$ feet, and higher objects must be 6 feet 7 inches from the centre of the rail, and must be firmly fixed.

14. The barriers at level crossings are to be closed three minutes before the arrival of the train. Exceptions are only to be made in the immediate neighbourhood of stations. Cattle should not be driven across level crossings for ten minutes before the expected arrival of a train.

15. Before the first train passes in the morning, the road must be looked over carefully by the watchman, to ascertain that it is in its normal state. During the day the road should be examined at least three times, and during the night it should be examined before the passage of every train. In this examination special attention should be given to ascertain that the points are in working order.

16. Mile posts, according to the miles in use in the particular district, are to be placed along the railway; and each mile is to be sub-divided by posts into 100 divisions.

17. At the commencement and termination of all inclines or level parts of a railway, gradient posts showing the rate of inclination, and the length of each incline, and the length of each level portion.

18. Whenever two lines join, or a siding joins a main line, a signal post is to be erected to show how near to the junction waggons and carriages can stand with safety.

19. Trains approaching signals should be able to ascertain, at a distance of at least 1,000 feet, whether they can proceed or should stop.

20. The signals at the watchmen's stations are to be able to show that a train is approaching, and in which direction it is expected.

21. Arrangements are to be made that the approach of a train may be notified to the watchman's station at least three minutes before its arrival.

22. It is to be desired that arrangements should be made to enable an assistant engine to be telegraphed for to the nearest station from every watchman's station.

23. The name of every station in large clear letters is to be placed in a situation visible from the platform. It is desirable also that the distance from the nearest main station should be shown.

24. Every station must be provided with a clock, which is regulated according to the mean time of the locality; in larger stations the clock should be visible both from the road to the station and from the trains, and it should be lighted after dark.

25. In order to control the before-mentioned examination of the road and stations by the day and night watchmen, special regulations must be drawn up.

26. Every goods station should be provided with a standard gauge to measure the height of loads in open waggons, under which all loaded waggons should pass, in order that the load may not exceed the limits of bridges and tunnels, &c.

B.—Condition of the Working Stock.

27. Locomotive engines are not to be used until they have been submitted to a proof and pronounced safe.

The pressure at which they are to be worked is to be marked conspicuously upon them.

Within the precincts of each chief repairing shop, an open quicksilver pressure gauge is to be placed, so that the steam from the boiler may be brought into it by means of a small pipe in order that the accuracy of the spring balance and pressure gauge on the engine may be easily tested.

28. The boiler of an engine is to be tested when new; after it has run 50,000 miles after first going out; after undergoing any great repair; after every 40,000 miles it has run after the first 50,000; and at least once in every three years: in this test, the boiler is to be stripped, and submitted to a water pressure of $1\frac{1}{2}$ times the pressure at which it is worked. Boilers which change their shape under this test are not to be used again.

When this examination of the boiler is made, all other parts of the engine should be submitted to a thorough overhauling, and a careful register is to be kept of the condition in which each part is.

Important repairs of locomotives in which the moveable parts are changed and the boiler is proved, will be considered as a thorough overhauling.

29. Every locomotive must be provided with at least two safety valves, of which one must be so constructed that it cannot be loaded to more than the appointed pressure.

30. The height of the water and the pressure of the steam in the boiler must be clearly visible from the footplate without its being necessary for the engine-driver to ascertain it by trial.

The loading of the safety valve must be so arranged that it can have a vertical movement of $\frac{1}{8}$ of an inch.

31. In order to guard against hot coals and cinders falling from the ash-pan it is closed in front, and in cases when necessary also behind, with a moveable flap. The chimney is similarly to be protected.

This precaution is necessary to prevent injury to buildings near the railway.

32. Every locomotive should be supplied with a force pump, in order that when the engine is stationary the proper water level in the boiler may be maintained.

33. Every engine should be provided with life guards, and with a steam whistle accessible from the footplate.

34. Wheels without flanges are forbidden.

35. Tenders and tank engines must be provided with powerful breaks.

36. Tyres of wrought iron for engines and tenders, should be at least $\frac{7}{8}$ inch thick, and for carriages and waggons at least $\frac{3}{4}$ inch.

37. All waggons and carriages in regular trains should be placed on springs, and be provided at both ends with elastic buffers and draw-bars.

38. Safety chains must be provided at both ends of all vehicles; they must be so fixed that when hanging down, their ends are 2 inches from the surface of the rails.

39. All vehicles must be provided with efficient arrangement for the lubrication of the axles.

40. In every train, besides the tender breaks, the following is the proportion of the number of pairs of wheels in a train to which break power must be provided for different gradients, viz.,

	For passenger trains.	For goods trains.
On gradients not exceeding 1 in 500 -	1 in 8	1 in 12
" " 1 in 300 -	1 in 6	1 in 10
" " 1 in 200 -	1 in 5	1 in 8
" " 1 in 100 -	1 in 4	1 in 7
" " 1 in 60 -	1 in 3	1 in 5
" " 1 in 40 -	1 in 2	1 in 4

Mixed trains which travel at the same speed as passenger trains should be provided with the same number of breaks as passenger trains.

The breaking arrangements should be sufficiently powerful to allow of the wheels of a loaded vehicle being completely skidded.

41. The doors of passenger carriages should be capable of being opened only from the outside, in case the doors are not at the ends of the carriages. Every door is to be provided with a double fastening, of which at least one is a latch.

42. All goods waggons loaded with inflammable materials must be safely covered.

43. Passenger carriages are to be lighted inside on the journey after dark, as well as in the case of tunnels which it takes more than three minutes to traverse.

All vehicles are to be provided with such arrangements that signal lamps can be placed outside them.

44. All vehicles after they have run from 12,500 to

15,000 English miles are to be periodically overhauled, and the axles, bearings, and springs to be removed.

45. Upon each vehicle must be clearly shown—

(*a*) The railway to which it belongs.

(*b*) The number under which it is recorded in the workshops, and on the register of its condition.

(*c*) Its own weight, including axles and wheels.

(*d*) The maximum load which should be placed in it.

(*e*) The date of the last overhauling.

46. Every train should be provided with tools by which injury happening to the train on the journey may be remedied as far as possible, and the journey be continued.

C.—Regulations for Working.

47. No one train should contain more than 200 axles.

48. In forming a train the proportionate number of breaks specified in article 40 is to be attended to, and the last vehicle is to have a break.

49. One empty vehicle at least should be placed between the engine and the first passenger carriage.

Timber should never be carried in a passenger train.

50. In passenger trains the draw-bars should be so far drawn together as to cause the buffers of the vehicles to be in contact when the train is at rest.

Snow ploughs or waggons to break ice should never be placed in front of the locomotives of regular trains. When required the snow ploughs or waggons should be sent a specified distance in advance of the trains.

Engines with snow ploughs attached should not be sent with passenger trains.

In mixed trains waggons with couplings differing from those in ordinary use are not to be placed either in front or immediately behind passenger carriages.

51. Before a train leaves a station, it should be carefully examined, especially to ensure that the carriages and waggons are properly coupled, that the side chains are hanging as directed, that the communication between the guard and engine-driver is connected, that each waggon is similarly loaded, that the necessary signals and lamps for the journey are attached, that the breaks are provided according to regulations, and that the vehicles are in proper order.

52. Before the departure as well as before the arrival of a train, notice should be taken whether the road is clear, and every facing point set right.

53. No passenger train may start from a station before the fixed time, and before starting all the carriage doors must be closed, and the proper signals must be given.

When several trains are timed to follow one another, passenger trains must not start for ten minutes, and good trains for five minutes, after the previous train. For trains which follow trains not in the time table, the interval must be kept by signal.

If trains in travelling approach nearer to each other than the prescribed five minutes, the watchmen must signal the drivers to travel slowly.

The engine-drivers, conductors, and watchmen must be provided with good watches set to the right time.

54. The maximum speed laid down for trains must never be exceeded.

Trains must slacken their speed—

(*a*) If men, animals, or other impediments are observed on the line.

(*b*) If another train is stopping on the adjacent line of rails.

(*c*) If the watchmen give a signal to slacken speed.

On entering stations from main lines or branch lines, and especially in crossing from one line of rails to another, the speed must be reduced to enable the train to be stopped in a distance of 300 feet.

55. Pushing a train by an engine placed behind without any engine in front is forbidden.

When trains have to move back a long way, or in stations, this rule need not apply, but the speed must not exceed 15 feet per second.

Trains may be pushed from behind only—

(*a.*) In ascending very steep inclines.

(*b.*) In bringing trains into a station.

In these cases the speed must not exceed one half the usually permitted speed.

With ballast trains the engine may push the waggons.

56. Engines may only travel with the tender in front when an assistant engine goes to meet a train, or joins it at the bottom of an incline. An engine so assisting must not be attached to a train whilst it is in motion.

Ballast trains may travel slowly with the tender in front.

57. A locomotive standing in front of a train, or at rest in a station, must have the regulator closed, and the tender break on. The engine must not be left without some person to watch it.

58. Near frequented level crossings and roads running parallel with the railway, the steam whistle and opening the cock of the cylinder must be resorted to as little as possible.

59. The staff of the train must be under the orders of one man, and must be so distributed as to overlook all parts of the train, to have an effectual means of communication with the engine driver.

60. The watchmen on the line must observe the train as it goes by, and if anything is wrong give a signal to stop.

61. At the end of every train travelling in the dark, a bright signal lamp is to be placed so as to cast a light behind, and also to be visible by the engine-driver and the staff of the train.

So long as there is no better means of communicating between the staff of the train and the engine-driver, a communication must be made by a cord along the whole length of the train; on goods trains it should be extended as far as possible, and at least as far as the first breaksman.

62. Extra trains may only proceed when they have been announced by telegraph to the next station, and signalled to the watchmen.

63. Ballast trains and single engines, except assistant engines, may only proceed upon a special order of the superintendent of the traffic, and in strictly limited hours; and the station-master of at least the stations at each end of the line upon which the trains or engines are to move, must be informed of it.

The road must be cleared of ballast trains, engines, and single waggons at least a quarter of an hour before the time at which regular trains are due.

Ballast trains and single engines must be signalled in the same manner as extra trains.

64. Assistant or reserve engines must be placed at distances not exceeding 60 miles, and be kept in steam.

At the stations where they are placed, there should be kept all such tools as are necessary for clearing and repairing the road if a train leaves the rails.

65. No one may travel on the engine without the leave of the chief superintendent of traffic, or of the master of machinery.

66. Engine-drivers can only be employed who have worked for one year in a machine shop, and who, after at least one year of apprenticeship, have passed an examination before the master of machinery or his assistant, and have shown their fitness by a trial journey.

The fireman must have sufficient acquaintance with the management of the engine to enable him to stop it or back it, if required.

The Regulations for Traffic will be found in the next Appendix, CB.

Appendix CB.

Regulations for the Working of the Prussian State Railways.

Translated for the Commission, from the "Statistische Nachrichten von den Preussischen Eisenbahnen." Band XII. Berlin, 1865.

Note.—In making this Translation it has been considered expedient to retain the money, weights, and measures in their original denominations.

The following data will serve for their conversion into English units, when required.

Money.

1 thaler = 30 silbergroschen = 3*s.* 0*d.* sterling.

Weights.

1 centner = 50 kilogrammes French = 110·3 lbs., or nearly 1 cwt. English.

Measures.

1 German mile = one-fifteenth of a degree = 4·61 English Statute miles.

Regulations for the Conveyance of Traffic on the Prussian State Railways, and of those under Prussian State management.

For the local traffic of the Prussian state railways and of those under Prussian state management, as also for such of the traffic of the railways with each other as is not under other treaty regulations, the following printed rules of the combined German railway managements hold good.

A.—For the carrying of passengers, passengers' baggage, corpses, vehicles, and live animals.

B.—For the carrying of merchandise.

With addition to the orders printed in italics as special rules.

A.

Treaty Regulation

For the carrying of Passengers, Luggage, Corpses, Vehicles, and Live Animals, on the Railways of the Combined German Railway Managements.

The following rules for the carrying of passengers' baggage, corpses, vehicles, and live animals, came into force on all the railways belonging to the union of management of German railways on the 15th April 1865.

Special decrees of individual railway managements will be in force in addition to these rules.

I. General Orders.

§ 1.—Duties of servants.

Servants in the employ of the railways are required to conduct themselves towards the public with politeness and modesty, at the same time with firmness, and to be obliging in the duties entrusted to them.

The services they are called on to perform by their rules are gratuitous, and it is strictly prohibited to receive presents from the public for such services.

Smoking during official intercourse with the public is forbidden to railway servants.

§ 2.—Rights of railway servants.

The public is required to submit to the direction of railway servants wearing uniform or badges of office.

§ 3.—Decision of disputes.

Disputes betwen the public and the railway servants are settled by the station masters during the trip of the engine-driver.

§ 4.—Complaints.

Complaints may be made verbally or in writing to the superior officials; they may also be entered in a book for the purpose, which is kept at every station. The management will reply to every complaint bearing the name and address of the complainant.

Complaints of a servant should give as correct a description as possible either by his name, his number, or what is indicated in his uniform.

§ 5.—Admission to stations and to railways.

Admission to stations and to railways, with the exception of the parts permanently or temporarily opened to the public, is forbidden to everybody except such as may have special authority.

§ 6.—Limits of obligation to transport.—Means of payment.

The carrying of passengers, animals, and effects, does not take place if prevented by unusual obstacles or force majeure, or if the means of transport at command do not suffice.

As payment, the gold and silver money, alloyed money excepted, legally current at the neighbouring railways, is taken everywhere at the rates of exchange indicated as affixed at every station, so far as it is not in contravention of any law.

Special Orders.

a.—*Carrying of Passengers.*

§ 7.—Time tables.—Extra trains.—Time of departure.

The carrying of passengers takes place in accordance with the time tables published and hung at all railway stations.

Extra trains are only allowed at the discretion of the management.

The time of departure of trains is determined by the clocks at the railway stations.

§ 8.—Fares.

The fares are indicated by the tariff hung at all the stations.

§ 9.—Sale of tickets.—Return of tickets taken.

The sale of tickets can only be demanded within the half hour preceding the departure of the train by which the traveller wishes to go, and within a still shorter interval, if two trains be going in the same direction within such shorter period of each other. Those who have not taken their tickets until ten minutes before departure of the train cannot demand their sale.

The amount of fare is to be kept ready counted in order to avoid delay by money changing.

The tickets confer the right to travel in the class of carriage thereon stated, so far as there may be room left in such carriages respectively on changing carriages. When there is no room the tickets may be returned against a repayment of the amount paid for them, or exchanged for tickets in other classes in which there may be room, the difference of fare being settled. Under all circumstances, travellers arriving with through tickets have the preference over new passengers.

§ 10.—Tickets and their validity.—Reduction of fares for children.

The ticket indicates the stations from and to which the transport was required; further the fare for the class of carriage the traveller intends to use, and last, the time or the train for which the ticket is good. The time or the train for which every ticket is good is indicated by being stamped on it, so that every buyer is able to judge whether the ticket is really for the journey intended by him.

Children under ten years are taken at reduced fares.

If there is any doubt as to the age of the children it is settled by the decision of the superior officer who may be present at the revision. For children in arms and who share the places of those to whom they belong no payment is required.

Passengers are permitted to get out at one intermediate station on their journey and continue it on the same or the following day to their destination by any other train not travelling at a higher tariff of fares. Such travellers must, however, show their ticket to the station master at the intermediate station immediately on the departure of the train, and he will endorse its extension. In these cases, the delivery of baggage at the intermediate station cannot be demanded.

§ 11.—Exchange of tickets taken.

An exchange of tickets taken against tickets of a higher class is permitted on payment of the difference of fare so far as there may be room in the higher class, until ten minutes before the departure of the train.

On the way, at intermediate stations, an exchange into the next higher class can only take place on purchasing a ticket of the next lower class for the additional distance to be journeyed. Travellers of the lowest class must, to change to the next higher class, purchase an additional ticket of the lowest class for the additional distance.

For the exchange into carriages of a higher class when on the road, the purchase of an additional ticket to the passenger's destination will suffice, provided the price thereof in addition to that of the ticket with which the passenger originally provided himself is at least sufficient to cover the fare in the higher class.

The exchange of a ticket of the higher class for one of a *lower* class is never admissible. (See however § 9.)

§ 12.—Single particular places are not sold and may not be engaged beforehand.

The servants are entitled, and at the demand of passengers required, to show them to their seats. Ladies travelling alone, are, at their request, as far as possible, to be placed in a carriage with ladies only.

An entire compartment may be engaged of the ticket clerk at the station of starting, a quarter of an hour at the latest before the departure of the train, on taking a certificate (schein) from the station master, and as many tickets as the complement of places in the compartment.

The possessor of an entire compartment may take with him two children under ten years of age free of payment. At intermediate stations entire compartments may only be granted if the room in the arriving train admits of it.

§ 13.—Exclusion of obnoxious persons from the journey.

People whose proximity, through a visible disease or other cause, would palpably be obnoxious to their fellow travellers, may be refused at the beginning or during the journey, unless they take and pay for a compartment to themselves. Their fares are returned them if they are not permitted to travel. If it be only ascertained during the journey that a traveller is of the above description he must be expelled at the next station unless a separate carriage can be paid for and provided for him. In that case, his fare for the part of the journey not completed will be returned him, as also his baggage.

In case a traveller pays for a special compartment, he may take as many persons to accompany him as it is constructed to hold.

§ 14.—Waiting rooms.—Ticket and baggage departments. —Ticket control.

The waiting rooms, the ticket and baggage offices, are opened at the latest half an hour before departure of every train.

The tickets taken by travellers must be shown on demand on entering the waiting rooms and on entering the carriages. During the journey the traveller must keep his ticket by him until it is taken from him.

Any one found travelling without a valid ticket must pay the amount fixed and made known by the railway management for the particular case.

Whoever refuses to make such payment may be turned out.

A traveller found not to have a valid ticket for his journey, must pay double fare for the whole journey performed by him, and when the station at which he joined the train cannot at once be satisfactorily shown he must pay double fare for the whole distance performed by the train, but always at least the sum of two thalers (6*s.*)

Any traveller, however, who enters a passenger carriage and at once, unasked, informs the conductor that he was prevented from taking a ticket by want of time, must, if he be admitted to perform the journey to which he has no right, pay the sum of 10 *silbergroschen* (1*s.*) *in addition to the fare.*

§ 15.—Taking seats.

The signal for passengers to take their places in the carriages is made by two distinct strikes on the bell.

§ 16.—Missing the time of departure.

After the signal of departure is given by the whistling of the locomotive, nobody is permitted to join the train. Any attempt to enter the carriages or to assist any one in so doing after the train is in motion is prohibited on the part of the police.

A passenger who has missed the time of departure of the train has no claim for the restitution of his fare or any other compensation.

§ 17.—Arrangements at intermediate stations. Opening and closing carriage doors.

On arriving at a station the name of the same is called out, and the time of remaining there, where that is fixed. As soon as the train is at rest the carriage doors of those carriages in which there are travellers destined for that station are opened at the side on which passengers may alight. The doors of the other carriages are only opened at the desire of the occupants. Whoever leaves his place at an intermediate station without placing something on it, must, on his return, if he find it taken in the meantime, content himself with another place.

§ 18.—Unusual stoppage on the open road.

If from any obstacles a train has to remain for a length of time outside a station, passengers may only then alight if the conductor gives his special permission. In that case the passengers must at once go away from the rails, and take their places again at the first signal of the steam whistle.

The signal for the continuance of the journey is given by three blows from the steam whistle.

Whoever may not have taken his place at the third whistle loses all right to the journey.

§ 19.—Conduct during the journey, and on entering and alighting from the carriages.

During the journey no one may lean over sideways out of the carriage, lean against the door, or tread on the seats.

Passengers may not open the doors themselves for getting in and out of the carriages; they must leave the railway servants to open the doors, and they may not get in or out of the carriages until the train is absolutely still.

Every passenger must keep away from the rails and from the locomotives, and no one may leave the station by any direction but that indicated.

§ 20.—Damaging the carriages.

There is a regulation price for breaking windows; and where it occurs the fixed amounts are immediately collected by the railway servants. The railway management is also empowered to demand compensation, and collect it immediately through their servants, for dirtying the inside of carriages, tearing the curtains, &c., &c.

§ 21.—Delay in the trains.—Interruption of the journey.

Delay in the departure or arrival of the trains confers no claims against the railway management. For an omitted or incompleted journey passengers are merely entitled to the return of their fares for the distance not accomplished.

§ 22.—Accompaniment of dogs.—Taking combustible objects.—Smoking tobacco.

Dogs and other animals are not admitted in passenger carriages.

Smoking tobacco is permitted in every class; in the first class however only with the consent of all the passengers in the compartment, so far as there may not be a special smoking carriage of that class in the train. In every train there must be second class carriages for non-smokers, and, on demand, passengers of the second class may always be shown into carriages in which smoking is not allowed. Tobacco pipes must be provided with covers. Combustible articles, as also all baggage containing fluids and other objects which might in any way occasion damage, particularly loaded guns, gunpowder, easily inflammable chemical preparations, and other matters of such character may neither be given in charge as passenger baggage, nor taken in the carriages. The railway servants are authorized to convince themselves that these rules are not circumvented.

Any one disobeying this rule is responsible for all the consequences of damage to other persons' effects and otherwise. The muzzle of a gun must always be pointed upwards.

§ 23.—Expulsion of drunken and misbehaved persons from the journey.

Whoever disregards the regulations, disobeys the injunctions of the railway officials, or behaves indecently, is expelled from the journey at starting, or on the way, without

restitution of his fare. Particularly drunken people may not be admitted into the waiting rooms, and if they have got there unperceived, must be turned out.

If such people are turned out on the journey, or if they are refused to be carried after they have already given up their baggage, they have no claim to receive it elsewhere than at the station to which it has been forwarded.

b.—*Forwarding of Passengers' Baggage.*

§ 24.—Description of baggage.

As a rule that is forwarded as passengers' baggage which passengers take with them for their use on their travels, particularly trunks, portmanteaus, and carpet bags, hatboxes, small cases, and the like.

Objects which are excluded from transmission as merchandise may not be taken as baggage.

Merchandise, packed cases, casks, and objects which cannot be adjudged necessary for travellers' purposes, are acceptable for transmission as travellers' baggage at the discretion of the baggage clerk, but may not be counted in the allowance of free baggage as settled in the tariff.

§ 25.—Manner of packing.—Removal of old post and railway labels.

Baggage which is not securely and firmly packed may be refused. Old post and railway labels must be removed, or the railway will not be responsible for any loss or miscarriage or delay resulting from their non-removal.

§ 26.—Delivery to the railway of baggage.

The taking of baggage in the train cannot be guaranteed unless it is delivered at the baggage office fifteen minutes before departure of the train, and the passenger ticket produced with it. Baggage freight must be paid immediately to avoid the contingency of its not being forwarded.

Exceptionally, baggage may be forwarded, in urgent cases, subject to booking (expedirung) afterwards.

Such baggage, however, is not regarded as given up for transmission until it is booked. The same applies to baggage received at halting stations.

§ 27.—Hand baggage.

Small easily portable objects may be taken in the carriages, provided they do not annoy the other passengers, so far as customs and duty laws admit of it. For such objects baggage tickets are not given, they are in charge of the passengers themselves.

Passengers of the fourth class, under the same reservations, may carry their tools and such burdens in baskets, bags, &c., as foot passengers carry, at the decision of the station authorities.

§ 28.—Baggage tickets and return of passengers' baggage.

Against the delivery of his baggage, with which the inspection of the passage ticket may be demanded, the passenger receives a baggage ticket. The baggage is delivered to the holder of this ticket, whose identity the railway is not necessitated to establish; and this delivery relieves the railway of all and every further responsibility.

The holder of a baggage ticket is entitled, on arrival of the train in which the baggage has been transmitted, to demand the delivery of his baggage in the baggage office, at the expiration of sufficient time for its removal from the train in due order, and the performance of any necessary customs' formalities or examination.

If he is not inclined to wait for the delivery of his baggage at once, he may call or send for it within twenty-four hours, during office hours. Should he let it remain longer than twenty-four hours, it will be subject to a charge, as per tariff, for warehouse rent.

§ 29.—Liability of the railway for baggage.

The railway is liable from the time of the issue of the baggage ticket, for the correct and undamaged restoration of the baggage generally, according to the terms and conditions of the "Regulations for the Combined Goods Traffic," as far as these are applicable to the forwarding of baggage; specially, however, according to the following principles :—

a.—Unless the passengers expressly declare a higher value, the railway makes good, in case of loss or damage, the amount of the actual damage incurred, never exceeding, however, the amount of two thalers (6*s.*) for every lb., after deducting the weight of the undamaged portion of the injured package.

b.—If the passenger has declared a higher value, the carriage charged is increased in proportion, at the rate of 2 per mille on the whole value declared for every twenty miles, or fraction thereof, to the destination, which must, however, be a minimum of 1-15th thaler, = 2½*d.* The declaration of value is only binding when it is inserted in the baggage ticket, by the baggage clerk, at the station of departure.

c.—The management is free of all claims on baggage, if not made within three days of arrival of the train at the station of destination. (§ 28.)

Passengers to whom their baggage has not been delivered, may claim to have the day and hour at which it was demanded written on their baggage tickets, by the baggage clerks.

For loss or damage to objects not given to the authorities for transmission, particularly for the loss of or damage to objects taken in the passenger carriages, the management is only responsible if it can be shown to be from the fault of their servants.

§ 30.—Lost baggage.

Missing packages may only be regarded as lost if not found in eight days after arrival of the train by which they were booked, and the passenger may then claim the payment of the guaranteed sum, as per § 29, with release of all further responsibility on the part of the railway management. In addition to this the passenger may reserve the option to reclaim the package, in case it be found afterwards, within four weeks of his receiving notice of the same, against return of the amount of compensation received. In such case the package to be returned him, free of charge, at its original destination. In case of such a reservation he is to receive a certificate of the same.

§ 31.—Liability of the railway for postponed delivery.

The liability of the railway for postponement of delivery (§ 28) is arranged on the following rules :—

1.—The compensation to be made for the proved damage of interest, if such really occur, is not to exceed 1/30 thaler (about 1½*d.*) for every pound weight detained, for every day commenced until the baggage may be regarded as lost.

2.—If the passenger wishes to secure the ratio of damage for postponed delivery as the amount of interest for punctual delivery, he must give up the baggage for transmission in the local traffic of the management, at the station of departure, subject to the regulations for these cases. He has then to make the suitable declaration in the prescribed form, two hours before departure of the train by which the transmission is to take place, and may take place, according to the traffic regulations. The charge for this is 2 per mille for the amount of interest declared for every 20 miles commenced of the distance to be traversed, with a minimum sum of ten silbergroschen (1*s.*), and fractions of groschen charged as a groschen. Against this the passenger will receive as compensation for late delivery, such amount of the same as can be shown, within the declared sum.

The declaration of a higher interest in punctual delivery takes place at the baggage office of the departure station, and has only a binding validity in case the bagyage clerk has inserted it in the baggage ticket.

The railway is absolved from liability for postponement of delivery, as soon as they can show that the care of a goods carrier (frachtfuhrer) could not prevent the delay.

§ 32.—Baggage porters.

At the stations at which there are porters, travellers may use their services for carrying their baggage to and from the railway premises, but without responsibility of the railways. These porters are recognizable by their badges.

The porters are provided with printed instructions, which they are bound to keep with them, as well as the printed rates of charge for their services, and must show on demand.

§ 33.—Objects left behind.

All objects left on the railway premises, or in the carriages, are, on being found and delivered to the railway, detained three months. After expiration of this time these effects are dealt with according to the regulations of the various separate railways.

The period for the keeping of these objects is fixed at a year. If they are not claimed within a year, it is assumed that the proprietor or legitimate claimant will not make a claim for them, and is satisfied that they should be employed through the railway management for the benefit of the Railway Officials' Pension and Relief Fund. Perishable articles

are sold as soon as it is feared that their further detention would injure them. The proceeds are detained until the expiration of the year.

c.—*Transportation of Corpses.*

§ 34. Conditions of transportation.

The transportation of a corpse is only permitted when it is in charge of a person who has to take a passenger ticket, and then only in a freight waggon under lock and key and specially hired for the purpose.

The corpse must be in an air-tight locked case, and payment of the freight in advance may be demanded.

It is taken for granted that the necessary permission of the police for its transmission has been procured and can be shown.

d.—*Forwarding of Carriages and other Vehicles.*

§ 35.—Receipt and forwarding.—Time of delivery.

Carriages and other vehicles are only received for transmission to such stations as are specially appointed for the purpose. They must be given notice of two hours before departure of the train, and delivered not later than an hour before departure of the train to the station authorities. Senders may only count on a safe delivery of vehicles at intermediate stations by any particular train specified, if they are announced twenty-four hours beforehand. The railway is not bound to forward carriages and other vehicles by express and by quick trains.

Carriages and other vehicles which are accompanied by passengers are to be delivered to the baggage office against receipt of a transport ticket; carriages and other vehicles sent unaccompanied by passengers, are to be delivered to the freight department with the usual way-bill. (*Division B.* § 5.)

§ 36.—Delivery.

On arrival at the station of destination, the carriages or vehicles are delivered against restitution of the receipt given for them, and must be sent for at the latest within two hours of arrival if that has taken place before six o'clock in the evening. If the train should, however, arrive later than that hour, the above period is counted from six o'clock the following morning. A charge for rent is to be levied for every hour of longer detention.

The delivery of carriages sent accompanied, only takes place against return of the transport ticket and to the holder of the same.

§ 37.—Putting baggage, &c. in carriages.

It is permitted to passengers accompanying carriages and vehicles to put baggage and travelling effects in them so far as no toll and duty regulations are thereby contravened. (*See* § 38.)

§ 38.—Responsibility of the railway for vehicles.

The railway is responsible for carriages and vehicles forwarded on the conditions and agreements for goods traffic contained in the combined goods regulations, in so far as they may be applicable to the object, but they are not responsible for such damage which has occurred from dangers, the prevention of which is accomplished through the accompaniment enjoined by them or voluntarily undertaken by the sender. Thereby it is stipulated that on making claims for loss or damage, the basis on which the claim is calculated according to the legal right shall not exceed the value declared by the sender in the form prescribed by the railway.

Such declaration of value is only for the carriage or the vehicle itself, and is not admissible for any articles which may be in it. (§ 37.)

In reference to the latter, the railway is not responsible for damage which has occurred through dangers preventible by accompaniment, and only for other kinds of damage if it be shown that they are caused by the fault of the railway management or of their servants.

If declaration of value be elected, the freight of the carriage or vehicle is increased at a certain scale.

This scale is one per mille on the declared value of the carriage or vehicle for every 20 miles or fraction thereof of the whole distance of the journey, with a minimum amount of 1/30th of a thaler, and fractions of groschen to count as whole ones.

If no declaration of value is made, it is stipulated that the amount of value, to be ascertained by the means provided by law, and on which the claim for loss or damage is assessed, shall not exceed the amount of three hundred thalers (45*l.*) including carriage and contents.

The declaration of a higher value than three hundred thalers for a carriage sent accompanied, has only legal value if it be stated on the transport ticket by the baggage clerk at the station of departure. The declaration of higher value of carriages sent unaccompanied must be on the freight bill. (Division B., § 23.)

§ 39.—Time of delivery.

The time of delivery for accompanied carriages and other vehicles which are forwarded by passenger trains is at least that appointed for express goods; for carriages and vehicles not so accompanied, the time of delivery is as for ordinary goods.

In case of declaration of interest in prompt delivery, the rules of the combined goods regulations, § 25, come into operation.

The delivery of accompanied carriages and other vehicles may be demanded in the period fixed for baggage in the second portion of paragraph 28. *The responsibility for indemnity for omission of delivery within this period, as a rule, does not extend further than the payment of ten thalers at the outside for every vehicle not arrived and for every commenced day of non-arrival.*

The declaration of higher interest in prompt delivery of accompanied and other carriages and vehicles, is made at the baggage office of the station of departure, and has only legal binding value, if it is noted by the baggage clerk on the transport ticket—for carriages without accompaniment, the declaration is made according to the regulations for goods.

In every case, an addition to the freight is charged at the scale of ½ pfenning for every mile, and for every 20 *thalers or fraction of* 20 *thalers of the whole sum declared, fractions of silbergroschen being counted as a full groschen, and with a minimum charge of three silbergroschen.*

e.—*Transport of live Animals.*

§ 40.—Receipt, loading and unloading.—Exclusion of sick and wild animals.

Live animals are only taken at, to, and from certain stations appointed for the purpose. The sender or receiver must himself attend to or cause to be attended to, the loading into and unloading out of the carriages, and also procure or cause to be procured the necessary means for the fastening up and tying up of the animals, and must satisfy himself of their safe stowage.

Sick animals or animals coming from districts in which there is a sickness prevalent among cattle are not taken.

The railway is not bound to transport living animals without a person in charge for every waggon, nor wild beasts.

Small cattle, and particularly fowl, are accepted for transport without accompaniment, but only in portable sufficiently well fastened cages (airy and sufficiently roomy receptacles); other cattle is only taken for transport in charge of persons, who must, unless an exception is made in their favour by the station master, take their place in the cattle waggon, and whose duty it is to superintend the cattle during the transportation.

§ 41.—Transportation of dogs.

The transportation of dogs takes place in separate compartments.

The dog's fare must be paid on handing it over, for which a ticket is given, on production of which, the dog is given up on completion of the journey. The management is not bound to keep dogs which are not fetched from the station immediately after arrival.

The provisions of this paragraph are only in force so far as regards dogs accompanied by passengers in passenger trains; in other cases the general rules contained in paragraphs 40 *and* 43, *are in force as regards the transportation of dogs.*

§ 42.—Transportation of horses.

The determination as to what trains horses may be conveyed by, and in what numbers, rests with the discretion of the railway authorities.

The horses must stand ready to be placed in their waggons at least an hour before departure of the trains. If the train starts at night or before seven o'clock in the morning, the horses must be announced before eight o'clock in the evening. The safe transportation of horses between intermediate stations can only be relied on, when previous arrangements have been made with the station master; on arrival at their destination, the horses are delivered on the return of the ticket which has been given for them, and they must be taken away at latest an hour after their arrival at the station. After the expiration of this period, a charge will be made for their detention, even if they stand in the open air at the station.

The fare of horses must also be paid at the station of their departure.

§ 43.—Transportation of other animals.

The railway authorities determine the number of any other animals to be forwarded at once, as also the trains by which they are to be forwarded. The taking single animals by a train, principally depends on whether there is suitable room for them, and can therefore not be determined beforehand. The fare is payable at the station of departure.

The animals must be brought to the station two hours before departure of the train, and if the train starts at night or before seven o'clock in the morning, they must be announced before eight o'clock on the previous evening.

On arrival at their destination, the animals are delivered up against return of the transport ticket, the discharge from the waggons and driving them away, must take place at the latest two hours after arrival at the station. At the the expiration of this time, a charge is made for their further detention for the period they may be allowed to remain.

Every kind of animal except dogs (see paragraphs 42 and 43), which are forwarded according to the provisions of paragraph 41, and animals in cages (§ 40, supplement) are to be given up at the goods department, against receipt of a transport ticket—animals in cages at the option of the sender, either in this manner or at the goods department, by means of a freight bill. (Division B, § 5.)

§ 44.—Responsibility of the railway for animals.

The liability of the railway for loss and damage to dogs, horses, and other animals in their charge for transportation, is determined by the convened conditions contained in the combined goods regulations for goods traffic, so far as these are applicable to the carrying of animals.

But the railway is not answerable for damage arising from any special danger to the animals in the transportation itself, and therefore gives no compensation, when the loss or damage occurs through escape, falling, knocking, suffocation of the animals, or for any causes during loading and unloading, during the transportation, or during the stay at the station.

Nor are they answerable for the damage arising from any danger which is avertable through accompaniment of a man in charge (§ 40). In this category all dangers may be classed which do not arise from such damage to the means of transport employed, for which the railway is responsible, particularly also those which may be averted by sufficient attendance on superintendence and feeding of the animals on the journey.

When compensation is due, the value to be ascertained and made good, both in cases of loss and of damage, shall not exceed the amounts declared by the sender in the form prescribed by the railway; when such a declaration has not been made, the amounts shall not exceed the following scale.

Thalers 150 (22*l.* 10*s.*) for a horse.
,, 70 (10*l.* 10*s.*) for a fat ox.
,, 50 (7*l.* 10*s.*) for a head of cattle.
,, 6 (18*s.*) for a calf.
,, 20 (3*l.*) for a fat pig.
,, 8 (24*s.*) for a lean pig.
,, 4 (12*s.*) for a sheep or a goat.
,, 2 (6*s.*) for a dog.
,, 10*s.* (30*s.*) per cwt. for other animals.

When declaration of value is elected an addition of one per mil to the price of transport is charged on the whole amount declared for every 20 miles or portion of 20 miles of the whole journey, with a minimum of 1-30th of a thaler, and fractions of groschen to count as a whole.

The declaration of a higher value on cattle delivered to the goods office for transportation takes place on the freight bill. (Division B, § 23.)

The declaration of higher value on cattle delivered to the goods office for transportation has only legal validity if inserted in the transport ticket by the goods clerk at the station of departure.

§ 45.—Time of delivery.

The time for delivery is according as the transportation takes place by passenger or by luggage trains, that for express or ordinary goods, and is calculated on the basis of the arrangements of the combined goods regulations, which also determine the consequences of postponed delivery and the rules as to declaration of interest in punctual delivery.

The delivery at destination of horses and dogs forwarded by passenger trains may be demanded in the time determined for the delivery of baggage (§ 28, second part.) The declaration of a higher interest in the punctual delivery of accompanied animals takes place at the baggage office of the station of departure and has only a legal value if it is inserted in the transport ticket by the baggage clerk. For unaccompanied animals the declaration is made according to the rules for merchandise laid down. (Division B, § 25.)

In each case an addition to the freight is charged at the rate of ¼ of a pfenning per mile for every 20 thalers or fraction of 20 thalers, wi tha minimum charge of 3 silbergroschen, and fractions of groschen counted as a whole.

B.

Regulations for the combined Merchandise Traffic on the Railways of the Combination of German Railways.

§ 1.—Operation of the regulations.

Every railway belonging to this combination undertakes, on the conditions of these regulations, the transportation of merchandise from and to all stations adapted for goods traffic without requiring the intermediation of an addressee, for the transfer of the goods from one railway to another.

This rule is not in force as far as regards personal baggage, cattle, and vehicles. (*See* Regulation A.)

For local traffic, that is for traffic between various stations in the territory of one railway, and for combined traffic between the stations belonging to various railways in the combination, the particular regulations of the railway and its reference to the combined railways are valid. (*See* introduction.)

§ 2.—Receipt of goods.

The railway is not bound to accept goods for transportation, which is not satisfactorily packed according to their judgment, or is not packed at all, whatever its nature may be, if in the opinion of the railway it requires to be packed, as security against loss or damage during the transportation. Such goods may be forwarded exceptionally, if the sender will acknowledge the wanting or imperfect packing by a declaration under his own signature, repeated on the freight bill.

Blank forms are kept in the railway offices on which the declarations by the senders in respect to want of packing or deficient packing are to be written. Particularly sugar in loose loaves is not taken without such declaration of the sender.

Cigars and victuals only in well roped packages sealed or plombed.

§ 3.—Objects excluded from transportation.

Documents, gold and silver bars, precious stones, pearls, diamonds, coin, platina, pictures, and objects of art, as also all goods in respect to which the interest for punctual delivery in reference to which the damage on delay in delivering would exceed the scale named in paragraph 25, are absolutely excluded from transportation on the combined railways.

Also, the above-named objects, so far as they are not obliged to be forwarded by post, are accepted for transportation.

It is, or will be, (wird) publicly advertised what objects are excluded from transportation on certain lines and for certain distances.

I.—The following are excluded from transportation altogether.

A.

1. *All such articles as by their constitution in weight, shape, or form or size, are not suited to the carrying appliances of the railway in the judgment of the forwarding officer.*
2. *All objects which by law must be sent by post.*
3. *All combustible articles and those causing danger of fire, as loaded guns, gunpowder, fulminating mercury and gold, fireworks, and generally everything liable to spontaneous combustion and explosion, with the exception of the objects specified in II. 2 to 7, as admissible under certain conditions, and percussion caps.*

B.

As express goods (§ 11).

All articles which in the judgment of the railway officials are, from their size, weight, dimensions, or structure inadmissible for transportation in passenger trains.

II.—The following articles are only taken for transportation under the conditions herein-after stated.

1. *Articles of which the single package weighs more than fifteen cwt. or the dimensions of which exceed the space of a waggon, and such goods as have been taken according to the tariff at reduced rates are to be loaded and unloaded by the respective sender and receiver if the railway management does not undertake to do this of their own accord.*

2. *Concentrated mineral acids are only taken in ballons, which must be well packed in a separate package, for which twisted baskets may be used. The baskets or cases in which the ballons have been packed, must have handles to facilitate their loading. Packages weighing more than 1½ cwt. may be refused.*
3. *Chlorate of potash must be carefully packed in paper, and the paper parcels must be enclosed in wooden barrels or cases.*
4. *Naphtha, hydrocarbon, photogen, polar oil, mineral oil, slate oil, &c., ether and ether oils may only be transported in double packages, that is in glass bottles containing the chemicals packed in tin or pewter boxes lined with chalk or sawdust.*
5. *Lucifer matches and inflammable saltpetre must be packed either in strong tin, or at least in very firm wooden cases, pasted over with paper of not more than 40 cubic feet contents, and must be so thoroughly well packed that the cases are quite full.*

   The contents of the cases must be distinctly marked on them.
6. *Phosphorus must, surrounded with water, be in soldered zinc boxes, which do not contain more than twelve pounds.*

   The zinc boxes must be firmly packed in strong cases, filled with sawdust, the cases well embaled in strong canvas, have two strong handles at the top ends and the upper side marked.
7. *Raw petroleum, also greasy wool and yarns, greasy wool and cotton yarn waste, and generally all that kind of greasy goods liable to spontaneous ignition, particularly shoddy and mungo, are only forwarded in open waggons and by goods trains.*
8. *Burnt lime is only taken for transportation unpacked; when covered, and at the demand of the railway, the sender has to provide the covers.*
9. *Unpacked hay and straw, also unpacked timber for fuel, are only admissible for transportation in covered waggons, and the senders and receivers respectively have to undertake the loading and unloading.*

The above articles specified in No. 2 to No. 7, are only accepted for transportation on certain days of the month announced by advertisement, so far as they are not forwarded in quantities of at least 40 cwt. at once, to one and the same place, or a freight on at least 40 cwt. paid for them.

For any quantities for which a separate waggon is given, the freight is payable on 40 cwt.

Whoever makes a false declaration as to the contents of packages containing goods excluded from transportation, or admitted thereto only on certain conditions on account of their danger, is not only liable to prosecution by the provisions of the criminal law and police regulations, but is liable to a fine of two thalers per pound in addition to the responsibility for all consequences arising therefrom.

§ 4.—Contract for transportation.

The contract of freight is made by filling out the way bill on the part of the sender, and by stamping on it the railway stamp as proof of its acceptance on the part of the officials at the goods office of the station.

The printing on the way bill of the goods office stamp only takes place after the delivery at the station of the goods specified thereon is completed. At this point the contract may be considered complete and the delivery to the railway of the goods as effected.

§ 5.—Way bills or freight bills.

Every parcel (sendung) must be accompanied by a way bill printed in the prescribed form and stamped by the railway officers.

Special forms of way bills not suited to other articles are to be made out with goods to be loaded and discharged by the respective senders and receivers for the goods specified in § 3 supplement II. 2 to 7, and for goods in charge of customs.

The following special regulations are in force in regard to the above:—

1. The way bill stamped as per § 4 serves as proof of contract between the railway and the sender, yet in the case of goods to be loaded and unloaded respectively by the sender and the receiver according to arrangement between the railway and the sender, the weight or quantity specified on the way bill is not binding on the railway. At the request of the sender the stamp of the goods office of the departure station may be imprinted on the way bill in his presence, but it is to serve only as proof of the date when the goods were despatched.

The acceptance of way bills which contain instructions at variance with the provisions of this regulation may be refused. Way bills which accompanied the goods in other conveyances before delivery to the railway are not accepted as addendum to the railway way bills.

2. In the way bill, after the place and the date on which it is made out are inserted, the goods are to be described correctly and distinctly by mark, number, quantity, mode of packing, contents and gross weight; but goods which by any special regulation of the receiving railway are not admissible by weight, must be described correctly and distinctly according to the provisions of such regulations.

The railway may demand that goods on which, according to the tariff, the freight is reckoned in the basis of normal weights, are given up, not by their weight but by the measurement on which the proportion has been stated in the tariff.

The way bill must contain the signature of the sender, and the distinct and particular description of the address of the receiver and the station.

A print or a stamp of the name of the sender may be taken in lieu of his signature.

If there are various routes from the station of departure to that of destination, the address on the way bill must indicate the route to be taken. If this is not done the forwarding officials at the risk of the sender determine the route which may seem to them most suitable.

The external marks of single packages must be correct and agree with the indications on the way bill.

3. The sender guarantees the correctness of the statements contained in the way bill, and will bear all the consequences arising from incorrect, indistinct, or uncertain descriptions in the way bill.

The railway goods department have the right to prove and verify, in case of need, in the presence of two witnesses at least, the correct description of the contents of packages as inserted in the way bill in the presence of the sender or receiver or their representative.

In case of incorrect declaration of weight or contents, every railway may levy a fine according to their own by-rules in addition to the difference of freight.

The conventional fine is fixed at double the amount of the freight retained.

4. If the sender requires a receipt for the delivery of the goods at the railway, he may, when the rules of a railway do not permit receipts to be given, hand in two copies of the way bill, one of which is returned him stamped and completed with the word duplicate on it. This duplicate has not the validity of the way bill accompanying the goods nor of a loading ticket.

5. Loading tickets are not granted.

6. Goods sent to places not on a line of railway. In this case the sender must indicate on the way bill the station from which the receiver has himself to send for the goods (cfr. §§ 16 & 20).

7. The form for way bills is shown in the supplements A. and B., and is purchaseable at the station of the united railways.

Way bill forms are to be purchased at every station at the prices fixed in the tariff.

§ 6.—Orders respecting duties and taxes.

The sender is required to give the necessary papers which have to accompany all kinds of goods subject to collection of duties and taxes to the railway with the way bill when such goods are liable to examination for duty before delivery to the addressee. The railway is not bound to satisfy itself of the necessity or correctness or sufficiency of these accompanying papers, and neither the railway receiving such goods and accompanying papers, nor their successors, if they go by another railway, are answerable for the consequences of insufficient papers accompanying such goods. On the other hand, the sender is liable to the company for all fines and damages which they may incur on account of the want of or incorrectness or insufficiency of the accompanying papers.

If the railway undertakes, in consequence of the special request of the sender expressed in the way bill, when the declarations and documents of identification are added as required by law, to conduct the examination of goods for duty and taxes and advance any import, export, and transit dues as well as other public dues and levies as far as is according to law, and have not to be paid either at the station of departure or that of arrival, they do not thereby accept any liability. By such a special request as expressed above, the railway is not bound to undertake the mediation and has the right to give it to a forwarding agent if no intermediating agent is named in the way bill.

If the sender should have ordered a disposal of his goods such as in the particular case is now admissible by law, it is taken for granted that he agrees to the railway having the business done according to the way which in their judgment appears to be most to his interest.

If the railway were to undertake the transportation of goods given them with a way bill at the frontiers of the

country in which the goods are liable to duty without receiving from the sender the necessary accompanying documents of the duty office for transmission to the place of destination or to the place at which the declaration for duty has to be handed in, both sender and receiver would be liable to the railway for recovery and redress of all damages and detriments arising from all incorrectness, faults, and omissions in the way bill declaration of the sender which the railway would incur as carrier of the goods having the obligation to produce a declaration for duty in accordance with the particulars contained in the declaration on the way bill.

The sender has to enumerate in the way bill the documents he has added to it for the tax and duty treatment of the goods. The railway is not responsible for accompanying documents which are not specified in the way bill.

§ 7.—Calculation of freight amounts.

So long and so far as no through tariffs are published, the freight is calculated on the published tariffs of the separate railways added together. In addition to the charges stated in the tariffs for delivery, transfer, and reloading, nothing may be charged.

Cash outlays of the railways, such as transit, import and export duties, costs of taking over any necessary repairs to the goods which they might require during their transportation on account of their internal or external condition, are to be refunded.

If any special railways collect the goods from the warehouses of the senders, or get them discharged from vessels, or deliver them at the warehouse of the receiver or at any different place, such as packing yards, public warehouses, examining booths, vessels, and so on, the prices for such services are to be charged as stated in the tariff.

The freight is calculated by toll weight, the cwt. of 100 pounds equal to 50 kilogrammes, but on such goods as are not taken by weight, according to the rules laid down in the tariffs of the separate railways by the size of the waggon, or by cubic contents or cubic measure.

The weights are ascertained either by actual weighing at the stations or by calculation on the basis of the comparative rates given in the tariff. Parcels of less than half a cwt. are taken as half a cwt., and above that weight are divided into tenths of a cwt., each commenced tenth of a cwt. counting as a full tenth. This calculation of weight is, however, not to prejudice any minimum freight charge set down in the tariffs of any single railways.

The sender may be present at the determination of weight. If he should demand a re-weighing or other means of ascertaining the weight, before the goods are loaded, in his presence or that of his representative, he must pay weighing money at the rate fixed by tariff. All articles in one way bill subject to the same rate of freight are added together to make one total amount; but packed articles of weight under 20 lbs. may be charged separately.

The freight to be charged is rounded off in entire groschen, or kreutzers, so that in the thaler currency amounts under half a groschen are not counted, while half a groschen and over is counted as a whole, and in the gulden currency fractions of kreutzers are reckoned as whole ones.

Any goods loaded by the senders, according to the rules of separate railways, must not exceed the capacity of the waggon as stated on the same.

For overloading, the railway may levy a fine according to special rules without prejudice to their claims for other damages resulting therefrom.

The fine is fixed at double freight on the amount withheld.

§ 8.—Payment of the freight.

Freight must be paid on giving up the goods for transportation, or by the receiver at destination; the railway may, however, demand prepayment, and particularly perishable articles, or those of insufficient value to cover it, the freight must be paid in advance.

§ 9.—Charges forward and commission.

At their own option the railway may charge forward disbursements due on goods on their arrival at the station; the specification of such items may, however, be demanded. These charges are paid in cash to the sender after having been collected from the addressee.

The special regulations of the separate railways may determine whether advances are permissible on the value of the goods.

Advances on the value of the goods up to 100 *thalers* (15*l.*) *are permissible on the same conditions as charges forward if they are amply justified by the value according to the judgment of the forwarding railway officer.*

Commission on disbursements charged forward is only to be charged once at the rate fixed by tariff at the station of departure. Freights and charges are free of commission from one railway to another in cases where goods traverse more than one company's line. Commission on cash outlays by the railway, which are also charged forward, is also charged at a rate fixed by tariff.

§ 10.—Reception of goods.

The railway is not bound to receive goods for transportation before the transportation can take place, therefore, especially not in cases when the regular means of transport do not suffice for the business offered.

§ 11.—Delivery to the railway of the goods and transmission.

The goods must be delivered to the railway in the appointed hours for forwarding, and is forwarded according to the declaration of the sender either as ordinary goods or as express goods. (§ 14a.)

The forwarding offices are open to the public, in summer, from seven o'clock; in winter, from eight o'clock in the morning until seven o'clock in the evening, with the exception of a time for dinner, which is affixed at the forwarding office or advertised in a local paper. On Sundays and holidays ordinary merchandise is not received for transportation, nor delivered at the address at the station of arrival. Express goods are received and delivered on Sundays and holidays, but only at certain hours, made known once for all by placard in the forwarding offices and advertisement in a local paper.

Express goods must be given up (supplement B.) with a way bill printed on red paper, and will be forwarded in preference and as quickly as possible.

Ordinary merchandise, which are to be given up with a way bill, according to supplement A., are forwarded as far as possible, according to the rotation of their receipt.

The placing of waggons for such goods as are loaded by the sender himself, must be procured for a particular day, and the loading be completed in the time fixed at the station.

This time is made known by being affixed in the goods offices, also by advertisement in local papers.

§ 12.—Time for delivery.—Calculation of the same.

Every railway publishes periods for delivery. By adding the periods for delivery of the several railways concerned in the transportation, the time for delivery of the combined railways is arrived at. It commences at midnight following the date of the stamp on the way bill, paragraphs 4 and 5, and is verified if within the period the merchandise is taken to the warehouse or place of business of the addressee, or to such persons as, according to § 19, the delivery may be legally offered to, or in case such delivery may not take place at the warehouse or place of business of the addressee, if a written advice of the arrival at the place of destination has been sent to the addressee by post or other secure means.

The following maximum periods for delivery are determined for the territory of every board :—

A.—*For Ordinary Merchandise.*

For a transportation up to 20 *miles,* 3 *days; for greater distances, one day in addition for every additional* 20 *miles commenced.*

B.—*For Express Goods.*

For a transportation up to 20 *miles,* 24 *hours; for greater distances,* 12 *hours more for every additional* 20 *miles or fraction of* 20 *miles.*

In the periods for delivery A. *and* B., *the addition of respectively* 12 *and* 24 *hours is admissible only in the following cases :—*

a. *If the transportation is made by a train which, according to the time bill, remains overnight at any station.*

b. *If the goods do not remain in the direct course of the main line, but branch off to a neighbouring or branch line, or have to pass a river over which there is no bridge, or pass over from the territory of one management to that of another adjoining management.*

The period for delivery does not count during the operation of customs formalities. The management reserve the right, during fairs and other periods of excessive traffic, to determine and to publish additional periods for delivery.

For goods which are addressed at a station restante, to be called for, the time for delivery is held accomplished if the goods are at the station ready for delivery within the same.

§ 13.—Temporary prevention of transportation.

If the continuation of railway traffic be prevented by natural causes or other circumstances for a time, the sender is not bound to wait until the cause of prevention of traffic be removed, but he may cancel the contract on paying the railway indemnity for the costs of preparing to send the goods and of unloading them, which is fixed by tariff. He must also pay freight on so much of the journey as has been performed.

The dues for preparing for transportations and for unloading are stated in the tariff.

§ 14.—Advising and delivering goods.

The railway is bound to deliver the goods and the waybill to the addressee indicated on the way bill.

Subsequent orders of the sender to return the goods, or deliver them to a different consignee than the one originally stated on the way bill, must be acted upon by the railway if they have not on receipt of them already delivered the way bill to the address stated on it.

In such case the sender must, on demand, return the duplicate way bill (§ 5, No. 4), or the receipt for the goods which may have been given him.

The railway is not bound to consider any other instructions than such as were given at the station of departure.

If the way bill should already have been given to the addressee when the goods arrive at the station to which they are destined, the railway has only to follow the instructions as to the delivery of the goods of such addressee, as in the other case they would be liable to him for the goods.

In the case of goods which the railway do not undertake to deliver to the depôt, or the warehouse of the addressee, written advice of their arrival will be sent him by messengers, by post, or other customary way.

In cases where the railway think it desirable there will be contractors for collection and delivery of goods, both in the towns and for districts in the neighbourhood of towns on the lines of railway, and for these paragraph 18 *of the regulations is applicable.*

The tariff of dues to the contractors for collection and delivery will be hung at the goods office for public information.

Such consignees of goods as may desire to send to the station themselves for their goods, or avail themselves of different means of delivery than the contractors appointed by the railway, must give notice at the goods office in sufficient time before arrival of the goods, and, if the goods office require it, such notice must be in writing, with authenticated signature.

All goods subject to the control of customs, and which by customs order, or for any other reason, have to be delivered to Government warehouses or depôts, are excluded from the power of being sent for by the consignee. Goods addressed to be left at the station are not advised.

After payment of what freight and other amounts for disbursements and charges may be due on the goods, and handing up the certificate of receipt completed according to regulations, and showing the acquitted way bill, the delivery of the goods at the goods offices, and the placing of the waggons for discharge at the appointed localities takes place, subject to the following regulations regarding time.

1. The goods are to be taken away within 24 hours after advice of their arrival within the prescribed hours of business.

Goods addressed station restante, also goods of such consignees as have once for all, in writing, desired no advice to be sent them, are to be taken away twenty-four hours after arrival.

2. *The periods within which goods which were loaded by the senders, and have to be unloaded and taken away by the consignee, are fixed by the separate rules of each management.*

These periods are made known by being hung in the goods offices at the stations, and advertised in the local journals.

3. Intervening Sundays and holidays are not counted.

4. In case of the non-arrival of a portion of a parcel of goods on one way bill, of which each portion has an independent marketable value without reference to the rest, the consignee may not refuse to receive the portion come to hand, and to pay the freight on the same, without prejudice to his right of damages, or indemnity as per § 17.

The advice and delivery of express goods must take place in the shortest possible time, as stated in the special rules on this point.

Express goods, unless extraordinary circumstances make a longer time necessary, are advised within two hours, and delivered at the warehouse of the consignee within six hours of their arrival.

Advice and delivery of any express goods arriving later than six o'clock in the evening can only be demanded the following morning.

§ 14a.—*The receipt and delivery of goods other than through the contractors employed by the railway, takes place at the goods warehouses, or at the waggons when the loading and unloading is done in the open air. Thus the loading from, and discharging into, country carts is the business respectively of the sender and of the receiver.*

§ 15.—Warehouse rent and convened fines.

1. Whoever takes back goods from the warehouses or waggons of the railway, which had been given for transportation, without any of the reasons stated in § 13 before they are dispatched, has to pay not only the charge for loading and unloading, but a charge for rent for every day or portion of a day, at the demand of the management.

If a sender requires the delivery of his goods at an intermediate station of the journey to which they were originally sent, and the management consents to fulfil such request, the freight on the distance traversed has to be paid, besides a fine.

2. A warehousing charge can be made in case of a delivery in portions of goods specified in one way bill, or when a way bill is incorrect or incomplete, and the goods have in consequence to be detained for the correction or completion of the way bill more than 24 hours, of a certain rent for every 24 hours delay, for the completion of the delivery of the goods, to agree with the way bill.

A convened fine, for the amount of which the railway may demand security when the order is given, may be charged to any one not loading such goods as have to be loaded by the sender within the time stated in the special orders (supplement § 11, at the end), and at the expiration of the time, the railway has the right to remove the goods which are loaded from the carriage at the expense of the sender, to put the goods which are unloaded in the warehouse at the owner's expense and risk, and to remove the waggons from his disposal.

3. Whoever does not take away goods on freight within the fixed time has to pay rent on them.

4. If goods loaded by the sender are not unloaded and fetched away by the consignee within the time stated in § 14, No. 2, the railway is empowered to unload them at the expense of the respective sender or consignee, however, without undertaking any guarantee for them, and may also, by special laws, charge a conventional indemnity for warehouse rent, or as rent or fine for delay of waggons.

5. In the case of goods of which the receipt could not be communicated to the consignee, and with goods at the station to be sent for, the charge for rent and fine for delay of waggons commences at the expiration of the periods determined in the special laws.

(Supplement to § 14.)

6. The tariff of freights contains more particular determination as to the rates and ways of calculating these conventional fines for rent and delays of waggons.

§ 16.—In case of delays in delivery.

Goods, the receipt or delivery of which is refused or has not been effected in proper time, and goods the delivery of which has become impracticable; also, such as, addressed station restante, remain at the station longer than the proper time, without application having been made by the consignee, are stored at the expense and risk of the sender.

The railway has also the right to place such goods either in a public store or to place them in the hands of a respectable forwarding agent at the disposal of the sender, for account and risk of whom it may concern, and charge forward their outlays and expenses on them.

The railway shall equally have the power to take such goods back to the sender, freight and return freight at his expense, as well as rent and all disbursements, in case he does not order a different disposal of them within fourteen days of information having been sent him by the railway.

The railway has the right to forward goods destined to a place not in the line of railway, to their destination, at the risk and expense of the sender, by means of a forwarding agent or otherwise, unless the sender shall have given them other orders as to the further transmission of the goods without delay.

The above order does not refer to goods sent to places away from the railway between the stations, and for which contracting agents for delivery have been appointed. (Postscript order to § 14, part 2.)

The sender implies his consent in delivering goods to the railway that if they be of a perishable nature and their receipt and delivery shall have been refused by the consignee

or not effected in proper time, or their delivery be not practicable, if they are likely to be spoilt quickly and are worth the freight, but not the return freight, that the railway sell them without further formality to reimburse themselves for freight and outlay, handing the sender the surplus realized.

The above also applies to when the consignee is not to be found and when the sender is not known.

Unowned Goods found in the territory of the railway are also subject to the orders of supplement A. § 33, and postscript.

§ 17.—General liability.

In the combined railway traffic all the combined railways are not liable as carriers for the whole transportation nor all those which have undertaken the transportation according to the way bill, but only the first and the last one which has taken the goods by the way bill. Any of the middle and intermediate railways over which the goods have passed can only be held liable as carriers if it can be shown that the damage for which indemnity is claimed occurred in their line.

The rights of railways amongst each other are not affected hereby.

§ 18.—Liability of railways for their servants.

The railway is liable for its servants and for any persons employed by it in executing the transportation of goods undertaken.

§ 19.—Extent and duration of liability.

The railway is liable for damage arising through loss or injury to goods from the time stated in § 4 to the time of delivery unless they prove that the loss or injury has arisen from causes over which they have no control (vis major), or from the nature of the goods, or from natural decay, diminution, ordinary leakage, &c., or through insufficient packing, not externally perceptible. The delivery to packing yards, store houses, examination warehouses, and the like, also, in cases stated in § 16, the delivery in a public warehouse or to a forwarding agent, are considered equivalent to delivery to the consignee.

Goods may not be considered lost until four weeks after the time for delivery. The receipt of the goods by the consignee named in the way bill or by his servants or by any of the above stated persons to whom the delivery may legally be made and the payment of the freight cancels all claim against the railway.

The railway can only be held liable to make good any such damage as was not perceptible on delivery of the goods, even after the delivery as before stated has been effected and the freight paid, if the establishment of the fact of the loss or damage be made without delay on its discovery and the claim in writing has been made to the railway management within four weeks, and when it is shown that the damage or loss occurred during the period the goods were in the railway's possession.

In addition, all claims on account of entire or partial loss or damage to the goods are invalid if not made within one year from the day the delivery should have taken place, and if the goods were received and the freight not paid, all claims for damage or partial loss of the goods are invalid if not made within one year from the day the delivery was effected.

§ 20.—Limitation of liability on goods which are sent not to railway stations.

If goods taken are on a way bill addressed to a place which is not on a line of connecting railway, the liability of the railway does not extend to the whole distance but only for transportation to the place at which the railway carriage ends. In reference to the further forwarding only the liabilities of forwarding agents are incurred.

In regard to the contract deliveries appointed by the railway management between railway stations and places lying off such stations (supplemental orders to § 14, part 2), the liability of railways extends for the transportation to their destination of the goods.

§ 21.—Limitation of liability where several destinations are given.

If the sender has stated on the way bill that the goods are to be delivered at or are to remain at a station of the combined railways, the liability of the railway for transportation only extends to such place, and the railway is only answerable for delivery to such place, notwithstanding a different destination may have been given on the way bill.

§ 22.—Special limitations of liability.

1. In reference to goods, which by their nature are exposed to particular danger of entire or partial loss or detriment, such as breakage, rust, rot, decay, unusual or excessive leakage, spontaneous combustion, and such like, the railway is not liable for damage arising from such causes, and therefore particularly not

a. generally; with dangerous substances, as sulphuric acid, aquafortis, and other burning articles or easily inflammable goods.

b. For breakage with brittle articles, as furniture and household utensils, glass, cast iron, full or empty vessels, bottles and glass vases, sugar in loose loaves, &c.

c. For leakage; that is, when the fluids escape through the fastenings of the barrels without external injury.

d. For decay; with fluids and other articles which easily ferment or decompose, or suffer by frost or heat.

e. For rust in metals.

f. For loss in weight with fresh or salted fish, oysters, and southern fruits.

2. In reference to goods carried in open waggons by agreement with the sender, the railway is not answerable for any damage arising from that method of transportation.

The tariff specifies the description of goods which the railway may carry at a reduced rate in open waggons, and the sender is understood to consent to this method of transportation unless he specially, by written notification on the way bill, requires his goods sent at the ordinary normal class tariff.

3. The railway is not responsible for dangers arising from insufficient packing of goods when the sender has stated in the way-bill that they are not packed, or are only partially packed, if, notwithstanding the nature of the goods, they require to be packed as a protection against loss or damage during transportation.

4. The railway is not liable for damage arising from bad loading and unloading of such goods as by agreement with the sender are to be loaded an dunloaded respectively by the sender and the receiver; on the other hand, the senders and the consignees respectively are liable to the railway for any damage to the waggons occurring during such loading and unloading.

5. In accompanied goods the railway is not liable for any damage which might have been prevented by the person in charge.

6. In all the above cases provided for by No. 1 to 5, it is taken for granted, unless the contrary be shown, that the damage arising out of the dangers not undertaken on the part of the railway have really occurred from the same.

7. The limitations of liability stated above, No. 1 to 5, do not hold good if it can be shown that the damage has occurred through the fault of the railway or their servants.

8. Loss of weight is not made good if the loss does not exceed one per cent. in dry goods for the whole distance; in wet goods and the following, which are treated in the same category, grated and powdered dyewoods, barks, roots, sweet wood, cut tobacco, fat goods, soaps and solid oils, fresh fruits, fresh tobacco leaves, sheep's wool, hides, skins, leather, dried and baked fruit, (other goods in this category must be named in the special orders,) two per cent. of the weight set forth on the way bill and certified at the station of departure. This rate, in cases where many packages are on one way bill, is calculable separately on each package, if the weight or the measure of the separate packages is stated on the way bill or can be otherwise proved.

In reference to loss of weight, the following may be added to the list of wet goods:—Animal substances, horns, claws, bones (entire and ground), dried fish, hops, and fresh cement or plaster (kitt).

The aforesaid freedom from liability provided for, does not operate when and so far as is shown that the loss according to the circumstances of the case did not take place from the nature of the goods, or that the per-centage does not suit the nature of the goods, and other circumstances; nevertheless, the separate managements reserve the right to fix a higher rate than two per cent. according to the nature of the special goods, up to which a claim for short weight cannot be made, in the case of goods loaded by the sender or unloaded by the consignee.

§ 23.—Money amount of liability.

Any indemnity to be made by the railway according to the provisions of the above paragraphs, is to be calculated in money on the following principles:—

1. In case of total or partial loss, the calculation of damage is made on the basis of the trade value to be proved by the claimant of damage, and in default of this the trade value which similar goods would realize at the time and place to which the goods on which a claim is made were deliverable, deducting the duty, freight, and charges not incurred in consequence of the loss of the goods.

2. For the purpose of calculating damage, however, the common trade value is not taken higher than twenty thalers (3*l.*) per cwt., unless such higher value is expressly stated in the place for the purpose on the way bill.

3. In case of a declaration of higher value, the declared amount is the maximum basis of the damage to be made good. In this case the sender has to pay an addition to the freight of one-tenth per mile of the whole declared value for every 20 miles, or commenced 20 miles, which the goods have to traverse within the separate or combined railways, with a minimum charge of one-thirtieth thaler, and rounding off of fractions to entire groschen.

4. In case of damage to goods, the decreased value of the goods is calculable in proportion to the sound value ascertained, as per No. 1, to the maximum value, as per Nos. 2 and 3.

5. The separate railways reserve the power to charge the insurance premiums, even when the goods are not declared at a higher value than 20 thalers per cwt.

§ 24.—Liability for omission of time for delivery.

The railway is liable for damage which has arisen from omission of delivery in due time (§ 12), so far as they cannot show that they could not prevent the delay by the exercise of the ordinary care and vigilance required of a carrier.

By receipt of the goods by the persons specified in the way bill, or by their servants, or by any persons to whom the delivery, by § 19, may legally be made, and by payment of the freight, all claims for omission of delivery in due time are released. If the goods are not accepted or the freight not paid, these claims are invalid after a year. This period commences with the expiration of the day on which the delivery took place, and if has not taken place with the expiration of the time for delivery.

§ 25.—Money amount of liability for delay in time of delivery.

The amount of indemnity for damage shown to be incurred by delay in the time of delivery, shall, in case the delay is not more than 24 hours, not exceed half the freight, and in longer delay than 24 hours shall not exceed the whole freight.

If the sender wishes to insure himself a large amount by the declaration of a certain sum, as the extent of his interest in punctual delivery, he must hand over the goods in the local traffic office at the station of departure under the regulations for these cases, see § 3.

The statement of a certain amount as the interest for punctual delivery, is made by entry of the same in a column provided for it in the way bill. The same must, to be valid, be written in the column provided for it, in words at length, and certified by the clerk of the goods office.

If the sender has fixed a certain amount in this form, as the interest in punctual delivery, the railway is bound to indemnify him over and above the amount of freight up to such declared sum at the outside for the shown damage.

In this case, however, an addition to the freight is charged for every three thalers of the declared sum, fractions of three thalers counted as one, for the first 20 miles, one pfenning; for the next 30 miles, half-pfenning; for every further 50 miles, half-pfenning. Commenced 20, 30, and 50 miles respectively count full. Pfennings over are counted as silbergroschen, and the smallest freight addition is one silbergroschen.

§ 26.—Change of these regulations.

The power to change these regulations is reserved.

Until the issue of new regulations the same will be published in a public newspaper, at every seat of a railway management. In the same public newspapers will also be advertised if these regulations should cease to have force. Also will be advertised in the same public newspapers if any railway management should leave the combination, or any other should join it.

Berlin, 3rd September 1865.

Appendix CC.

Communications from Mr. Peter Roe on the results of lowering Fares on the Newry, Warrenpoint, and Rostrevor Railway.

Sir, 5th February 1866.

Referring to my letter to you of the 3rd instant, permit me to add that my reduced third-class fare is now *exactly* one halfpenny per mile for return journey, and second-class a fraction over *three-quarters of a penny* per mile.

The population of Newry at our end of the line is about 13,000, and of Warrenpoint, at the other end, 2,000.

What, therefore, may reasonably be expected from the adoption of these reduced fares between any two points on some of the leading Irish lines where there is four times the population?

I am, &c.

W. Pole, Esq. Peter Roe.

Newry, Warrenpoint, and Rostrevor Railway.

General Manager's Office, Warrenpoint,

Sir, 1st February 1866.

The following, in connexion with my evidence before the Royal Commission, may not be unworthy of your notice.

On the 1st *October* last I took possession of this line for a period of seven years under working arrangements, namely, a *per-centage* of the net *earnings*.

I found the fares, particularly third-class, nearly one penny per mile, which I considered *too high*, and on the 1st of January I reduced the third-class 20 and the second-class 15 per cent.

The result for the month now closed is—

Increase in number of passengers, 757.

Increase in receipts for same, 11*l.* 13*s.* 4*d.*

Now, it may be said that this is a pleasure line, and therefore no criterion for other lines. No doubt it is in summer a pleasure line, but for the past month I can positively assert that no parties were moving about, on pleasure at least, over this line.

I therefore maintain, *although I stand alone amongst the railway managers in Ireland in this opinion*, that low fares produce beneficial results to the railway company as well as to the public at large.

I hope at the termination of the current half year to be able to show you that the reduction alluded to has given me some *thousands* more *passengers*, and some hundreds of pounds more money.

I need scarcely say that the increased number of passengers did not add one *single farthing* to my expenditure.

I am, &c.

W. Pole, Esq., Sec., Peter Roe.
Royal Commission on Railways,
House of Lords.

Sir, 13th April 1866.

I have the pleasure to enclose you a return of my passenger traffic for past three months compared with corresponding period last year, when the fares for third class was 20 per cent. and the second class 15 per cent. higher than I have been charging this year.

The result, as you will perceive, is a *practical proof* that low fares give increased revenue as well as greater public accommodation.

I am, &c.

W. Pole, Esq., Peter Roe.
Royal Commission, House of Lords.

Newry and Warrenpoint Railway.

Appendix CH.

Regulations for the Transport of Passengers and Goods on the French Railways.

The following Regulations have been translated, expressly for the Commission, from those published officially in the "Recueil Général des Tarifs des Chemins de Fer, par Napoleon Chaix & Co., Paris, Octobre "1865," a work which appears quarterly, and contains full particulars of the rates charged, both for passengers and goods, on all the French railways.

The Regulations selected for translation have been those of the "Chemin de Fer de l'Est," but they are very similar on all the lines.—April 1866.

Note.—In making this translation it has been considered expedient to retain the money, weights, and measures in their original denominations.

The following data will serve for their conversion into English units when required.

Money.

25 francs = 1*l.*
1 franc or 100 centimes = 9·6*d.*

Weights.

1 kilogramme = 2·21 lbs. avoirdupois.
100 kilogrammes = 221 lbs. or nearly 2 cwt.
1,000 kilogrammes = 2206 lbs. or nearly 1 ton.

Measures.

1 mètre = 3·28 English feet.
1 kilometre = 1094 yards or about $\frac{5}{8}$ of a statute mile.

For Rates.

1 franc per kilometre = 15½*d.* per mile nearly.

Or, multiply the number of *francs per kilometre* by 15·45. This will give the number of *pence per mile.*

A.

FOR QUICK SPEEDS.

(The Speed of Passenger Trains.)

Conditions of Application of the General Tariffs.—Passengers, Luggage, Articles of "Messagerie," Merchandise, Provisions, Milk, Finances, Valuables, Objects of Art, Dogs, Carriages, Funerals, Animals.

CHAPTER I.

Passengers.

Rates for Transport and Conditions of Application.

Art. 1.—The charges for the transport of passengers are fixed according to the tables to be seen hereafter (referring to the special published fares of the Company) not exceeding the following maxima:—

1st class (covered carriages lined and shut in with plate glass) - -	0 fr. 112	each passenger per kilometre.
2nd class (covered carriages shut in with plate glass, and with stuffed cushions).	0 fr. 084	
3rd class (covered carriages, and shut in with common glass) - -	0 fr. 0616	

Art. 2.—For soldiers or sailors travelling in a body, as well as for soldiers or sailors travelling alone on service, or sent on furlough, or returning to their homes after liberation, the charges are fixed after the following rates, representing one quarter of the legal tariff:—

1st class - - -	0 fr. 028	each passenger per kilometre.
2nd class - - -	0 fr. 021	
3rd class - - -	0 fr. 0154	

Art. 3.—Under three years, children pay nothing, on condition of being carried on the knees of the persons who accompany them.

From three to seven years, children pay half price and have a right to a separate place; but in the same compartment two children may only occupy the place of one passenger.

Above seven years, children pay full price.

Art. 4.—The transport of passengers is effected by means of the previous payment of the price of the place. This payment is verified by the delivery of a ticket.

Art. 5.—The distribution of tickets begins, at the latest in the large stations 30 minutes, and in the other stations

15 minutes before the hour fixed for the departure of the train.

It ceases, at the earliest, in the large stations for travellers with luggage 15 minutes, and for travellers without luggage five minutes before the fixed hour of the departure of the train. In the other stations, the distribution ceases, whether for travellers with luggage, or for travellers without luggage, five minutes before the hour indicated. But when the train is late tickets can be delivered in these latter stations to passengers with or without luggage who shall present themselves five minutes before the time announced for the passing of the train.

Art. 6.—Passengers should show their tickets on every demand of the company's officers. Every passenger who cannot present his ticket on arrival must pay, before going out of the station, the price of the place which he has occupied; the price to be paid is that of the class of the compartment in which the passenger was placed, and of the longest distance travelled by the train from the last station where a general examination has taken place, unless the passenger can prove his point of departure, in which case he only pays from that point.

Art. 7.—All stations of the system of the Chemin de l'Est correspond directly one with another for the delivery of tickets to passengers.

CHAPTER II.

LUGGAGE, ARTICLES OF MESSAGERIE, MECHANDISE, PROVISIONS, MILK, FINANCES, VALUABLES, OBJECTS OF ART, DOGS.

Section I.—*Rates for transport and conditions of application.*

§ 1.—Luggage.

Art. 8.—No passenger whose luggage does not weigh more than 30 kilogrammes, has to pay, for the transport of this luggage, any addition to the price of his place.

This franchise does not apply to children carried gratuitously, and it is reduced to 20 kilogrammes for children conveyed at half price.

Art. 9.—The excess of luggage is rated as follows:—

From 0 to 40 kilogrammes inclusive per ton and per kilometre	50c.
Above 40 kilogrammes per ton and per kilometre	40c.

This latter rate is applied to excess of luggage, which weighs together or separated more than 40 kilogrammes.

Art. 10.—The receipt of rates fixed by the preceding article is effected,—

From 0 to 5 kilogrammes inclusive, per indivisible fractions of 5 kilogrammes.

For more than 5 kilogrammes up to 10 kilogrammes inclusive per indivisible fraction of 10 kilogrammes.

For more than 10 kilogrammes per indivisible fraction of 10 kilogrammes.

Whatever distance be traversed the rate of one expedition cannot be less than the following minima:—

For one expedition of 0 to 40 kilogrammes, inclusive	25c.	Expense of loading and unloading included.
For one expedition of more than 40 kilogrammes	40c.	

Art. 11.—The excess of luggage of soldiers or sailors travelling at a quarter price, are subject to the quarter of the rate of the tariff regulated by Art. 9 and 10.

Whatever the distance which may be traversed, the minimum of the payment is fixed at 10 centimes per expedition. Cost of loading and unloading included.

Art. 12.—The transport of the excess of luggage is effected by means of the previous payment of the rate due for this excess.

Art. 13.—The registration of luggage is effected by the presentation of the passenger's ticket; it is verified by the giving of a luggage ticket.

This registration is accepted for the station inscribed on the ticket given to the passenger, but in cases where the station of departure does not distribute tickets for the particular station indicated by the passenger, the registration of luggage is still effected for this station, and consequently, the luggage, whatever may be its destination, is only subject to a single tax of registration, and to a single rate of loading and unloading when it is a case for paying this latter rate.

Art. 14.—The registry office for luggage is shut at all stations, two minutes at earliest after the hour fixed by Art. 5, for the cessation of the delivery of tickets to passengers with luggage.

Luggage presented for registration after the office is closed, is forwarded, at the option of the passenger, by high speed or slow speed, and is rated by its integral weight, either after the general tariff of articles of "messagerie" and merchandise by high speed, (*see* Art. 15 and 16, below,) or according to the general tariff of merchandise by slow speed, first series (*see* the general tariff by slow speed). In this last case the passenger will have to pay, besides the transport of his luggage by the railway, the cost of the porterage from the passenger station to the goods station, when the services of the high and slow speed are not united at the same station.

§ 2.—Articles of "Messagerie" and Merchandise.

Art. 15.—The articles of "messagerie" and merchandise by quick speed are rated without distinction of kind, as long as they do not contain finances, valuables, or objects of art, for which there is a tariff *ad valorem* (*see* Art. 19 below).

The rates of transport are fixed as follows:—

From 0 to 40 kilogrammes inclusive, per ton and per kilometre	50c.
Above 40 kilogrammes per ton and per kilometre	40c.

This last rate is applicable to all packages, although packed separately, if they form part of a whole, weighing together more than 40 kilogrammes sent by the same person to the same person.

The benefit of the condition expressed in the preceding paragraph, cannot be claimed by messagerie contractors or carriers, or other transport agents, unless the articles sent by them be all united in one packet.

Art. 16.—The receipt of rates fixed by the preceding article is effected as follows:—

From 0 to 3 kilogrammes inclusive, per indivisible fraction of 3 kilogrammes.

Above 3 kilogrammes to 5 kilogrammes per indivisible fraction of 5 kilogrammes.

Above 5 kilogrammes to 10 kilogrames inclusive, per indivisible fraction of 10 kilogrammes.

Above 10 kilogrammes per indivisible fraction of 10 kilogrammes.

Whatever be the distance traversed, the rate for one expedition cannot be less than the following minima:—

For one expedition of 0 to 40 kilogrammes, inclusive	25c.	Expense of loading and unloading included.
For one expedition above 40 kilogramme	40c.	

§ 3.—Provisions.

Per expedition of 50 kilogrammes at the least.

Art. 17.—The rate to be received for the transport by high speed of the following provisions:—

Fresh butter, fresh mushrooms, fresh shell fish, lemons, fresh "charcuterie," snails, fresh cheese, fresh fruits, game, oysters, fresh vegetables, eggs, oranges, bread, fresh fish, fresh meat, fowls, dead or alive, when they are sent *by an expedition of 50 kilogrammes at the least*, is fixed at 28c. per ton and per kilometre.

Whatever the distance traversed, the minimum of the receipt is fixed at 40c. per expedition, expense of loading and unloading included.

The expeditions of provisions of less weight than 50 kilogrammes are rated according to the general tariff of articles of messagerie and merchandise by high speed, unless it is to the advantage of the sender to pay for 50 kilogrammes according to the rate above.

§ 4.—Milk.

By expedition of 50 litres at least.

Art. 18.—The rate for the transport of milk by high speed when it is sent by expedition of 50 litres at least, is fixed at 28c. per ton and per kilometre.

Milk is rated according to its accumulated weight together with that of the cans.

The return of empty cans is free.

The loading and unloading of milk are effected by the care and at the expense of the senders or receivers.

Whatever be the distance traversed, the minimum of the receipt is fixed at 40c. per expedition.

The expeditions of milk less than 50 litres are rated according to the general tariff of articles of messagerie and merchandise by high speeds unless there is an advantage for the sender to pay for 50 litres according to the above price.

§ 5.—Finances, Valuables, Objects of Art.

Art. 19.—The price for the transport of gold or silver, whether in ingots, or coined, or worked, of plated gold or

silver, of mercury, and of platinum, as also of jewels, lace, precious stones, objects of art, (statues, pictures, artistic bronzes) and other valuables* is rated *ad valorem*, and at the rate of ·00252 c. per indivisible fraction of 1,000 francs and per kilometre.

Whatever be the distance traversed the minimum of the receipt is rated at 25 c. per 1,000 francs.

The rate of divers articles included in the preceding enumeration is not in any case less than the highest of the two rates which can be applied, whether according to the declared value and in conformity with the above tariff, or according to the true weight and in conformity with the general tariff of messagerie and merchandise by high speeds.

Coinage of alloyed metals is considered as merchandise and rated according to weight.

Art. 20.—The company is not bound to receive finances and valuables unpacked.

Senders must conform for the package and arrangements of finances and valuables, to the order of service fixed by the company and approved by the superior administration.

In cases of loss, the company is not bound to pay back beyond the declared sum.

§ 6.—Dogs.

Art. 21.—The rate to be received for the transport of dogs in passenger trains is fixed at ·0168 c. per head and per kilometre.

The minimum rate being 0·30.

Art. 22.—Dogs should be muzzled, in whatever season it be.

No dog is admitted in the carriages serving for the transport of passengers; but the company can place in compartments of special carriages, passengers who do not wish to be separated from their dogs.

Art. 23.—When dogs travel without being accompanied, the loading and unloading of these animals is effected by the care and at the risk and peril of the sender and receiver.

If the receiver does not present himself at the station on the arrival of the train, the company are free from all responsibility for accidents which may happen to dogs during the unloading, and these animals will be impounded, conformedly to Art. 29 below.

The company will also decline all responsibility in the absence of the receiver for the loss of dogs who may run away during unloading.

Art. 24.—The senders of dogs *accompanied or not accompanied* may moreover, if they wish, send them at the price and conditions of the tariff of ANIMALS IN CAGES, fixed by Art. 37 below.

§ 7.—Merchandise not weighing 200 kilogrammes under the volume of a cubic metre.

Art. 25.—Provisions and objects which are not specially expressed in the tariff of the "cahier des charges," and which do not weigh 200 kilogrammes under the volume of a cubic metre, are rated at half as much again as the prices fixed by the general tariff, unless in any case, the rate of receipt may be greater than that which would result from the application of the simple tariff to the fictitious weight calculated at the rate of 200 kilogrammes per cubic metre.

Section II.—*Accessory Expenses.*

Art. 26.—*Registering.*—The charge for the registering of luggage, articles of messagerie, merchandise, provisions, milk, finances, valuables, objects of art, and dogs, are as follows:—

One fixed rate of 10c. per expedition.

Art. 27.—*Manipulation.* (*Manutention.*)—The charge for the manipulation (loading and unloading) of luggage, articles of "messagerie," merchandise, and provisions, is a rate of 1 f. 60c. per ton.

The payment is made by indivisible fractions of 10 kilogrammes.

The following are exempt from charges for manipulation.

1st. Dispatches weighing from 0 to 40 kilogrammes inclusive.

2nd. Articles rated according to value.

3rd. Dogs.

Art. 28.—*Weighing.*—There shall be paid for all merchandise, which on the demand of the sender or the receiver shall be submitted to weighing, beyond that which the company are bound to do at their expense, in order to fix the charge:—

A rate of 10c. per indivisible fraction of 100 kilogrammes, and for every supplementary weighing.

But this rate will not be charged if the supplementary weighing proves an error to the prejudice of the sender or the receiver.

Art. 29.—*Warehousing.*—There will be charged for the warehousing of articles of "messagerie," merchandise, provisions and milk addressed to the station, and which are not taken away, no matter from what cause, within 48 house after the posting of a letter of advice, addressed from the company to the receiver:—

A rate of ·05c. per indivisible fraction of 100 kilogrammes and per day.

The same rate for warehousing is charged per indivisible fraction of 1,000f., and per day for articles according to value placed under the same conditions.

In the two cases above mentioned the minimum of the rate is fixed at 10c.

The rates fixed above are equally applicable to articles of "messagerie," merchandise, provisions, milk, and articles according to value, addressed to the residence of the receiver, and when the receiver is absent, or unknown, or refuses to take them in; on condition that advice of these circumstances shall be addressed immediately by the company to the sender.

In this case the cost of the return of the packages is to be charged on the merchandise.

Dogs which are not taken away on their arrival, are impounded at the expense, risk, and perils of the owner.

The cost of the impounding is to be defrayed as part of the expenses.

Art. 30.—*Deposit of Luggage.*—There is to be paid for the care of luggage deposited in the stations, under the company's responsibility either before the departure or after the arrival of the trains:—

A rate of ·05c. per article and per day. The minimum of the rate is fixed at 10c.

The deposit is verified before the departure, by the delivery of a luggage ticket; after arrival, either by the delivery of a ticket or by retention in the passenger's hands of the luggage ticket given at the departure.

The luggage of passengers forced to remain at junction stations to wait the departure of the first train which can take them to their destination, is exempt from every rate of care or deposit.

CHAPTER III.

Carriages, Funerals, Animals.

Section I.—*Rate of Transport and Conditions of Application.*

§ 1.—Carriages.

Art 31.—The rates to be received for the transport of carriages at the speed of passenger trains are thus fixed:—

Carriages with two or four wheels, with one body, and with a single seat in the interior - - -	56c.	per carriage and kilometre.
Carriages with four wheels, with two bodies and with two seats in the interior, *omnibuses, diligences*, &c. - - - - -	7168c.	

Two persons may, without additional price, travel in one-seat carriages, and three in two-seated carriages, omnibuses, diligences, &c. Passengers exceeding this number pay the price of second-class places.

Art. 32.—The transport of carriages whose dimensions surpass the proper size is not received.

§ 2.—Funerals.

Art. 33.—Funeral carriages enclosing one or more coffins are transported at the same prices and conditions as four-wheeled carriages with two bodies and with two seats dispatched at the speed of passenger trains.

Every coffin dispatched alone is transported in a separate compartment at the price of 0 fr. 336 per coffin and per kilometre.

Persons who accompany a single coffin travel in the carriages of the company, and pay for the places which they occupy.

§ 3.—Animals.

Art. 34.—The rates to pay for the transport of animals at the speed of passenger trains are thus fixed:—

	fr.	
Oxen, cows, bulls, horses, mules, colts, asses, beasts of burden -	0·224	per head and per kilometre.
Calves and pigs - - -	0·0896	
Sheep, lambs, and goats - -	0·0448	

* Gold or silver, whether in ingots, or coined or worked, platinum, jewels, precious stones, and other valuables are only transported by high speeds, and rated according to their value.

Plated gold or silver, mercury, lace, and objects of art (statues, pictures, artistic bronzes) are transported at high speeds, with a rate according to their worth, and by slow speeds with a rate according to weight. (*See* the general tariff of slow speeds.)

Persons who accompany animals travel in the carriages of the company, and pay for the places which they occupy.

Art. 35.—The horses of military passengers travelling at quarter fares are only subject to a quarter of the rate of the maximum tariff inserted in the preceding article.

Art. 36.—Animals whose declared value exceeds 5,000 francs are rated at *half more* than the price fixed by the general tariff for animals of the same species.

In cases of accidents befalling animals in the course of transport, the responsibility of the company is limited to 5,000 francs per head, unless the delivery note mentions a superior value.

Art. 37.—Small animals, such as dogs, cats, sucking pigs, guinea pigs, rabbits, monkeys, squirrels, birds, placed in cages or baskets furnished by the senders, are rated *by weight*, according to the prices and conditions of the general tariff of articles of messagerie and merchandise by high speed, and for the double of their real accumulated weight, together with that of the cages or baskets.

Art. 38.—The transport of carriages, horses, and cattle is only accepted at the stations and for the stations provided with embarking platforms.

These stations are indicated either by special bills or by the bills notifying to the public the order of the service of trains.

Those which are now open for the transport of carriages, horses, and cattle, as well for departure as arrival, are shown by an asterisk to the list of the stations in alphabetica order.

The superior administration reserve the right of determining the stations where the embarking platforms should be established for carriages, horses, and cattle.

Section II.—*Accessory Charges.*

Art. 39. *Registering.*—There is to be paid for the registering of carriages, coffins, and animals a fixed rate of 10 c. per dispatch.

Art. 40. *Manipulation.*—There is to be paid for the manipulation (loading and unloading) of carriages, coffins, and animals the rates as follows :—

	fr.	c.	
Carriages - - - -	2	0	each.
Coffins - - - -	2	0	„
Oxen, cows, bulls, horses, mules, asses, colts, draught animals -	1	0	per head.
Calves and pigs - - -	0	40	„
Wethers, sheep, lambs, and goats -	0	20	„

Art. 41. *Warehousing.*—There shall be paid for the stationing of carriages which are not taken away, from whatever cause, within 48 hours of posting a letter of advice addressed by the company to the receiver, a rate of 1 franc per carriage and per day.

In the case of coffins not removed, there shall be paid, dating from the arrival, a rate of 5 francs per coffin per day.

Animals which are not taken away upon arrival are put into the pound, at the cost, risk, and peril of the owner.

The expenses of impounding shall be paid on proof of the charge.

Art. 42.—Small animals in cages or baskets transported and rated according to the condition of Art. 37 are subject, as concerns the accessory charges, to the same rates and conditions as the articles of "messagerie" and merchandise at high speed.

CHAPTER IV.

General Regulation for all Transports at High Speed.

Art. 43.—All the rates above fixed (price of transport, minimum of receipt, and accessory charges) include the tax due to the treasury.

CHAPTER V.

General Regulations.

Art. 44.—*Distances.*—Every kilometre that is begun is paid for as if the whole kilometre had been traversed.

For every distance less than six kilometres the rate is paid as for six whole kilometres.

Art. 45.—*Fractions of Weight.*—The ton weight is 1,000 kilogrammes.

The fractions of weight are regulated in the following manner (save the exception provided for in Art. 16) :—

1. From 0 to 5 kilogrammes.
2. Above 5 to 10 kilogrammes.
3. Above 10 kilogrammes, per indivisible fraction of 10 kilogrammes.

Art. 46.—*Calculation of Rates.*—The total rating of an expedition of the same nature is effected by rounding the numbers to 5 centimes above when it reaches 2 centimes 5 millimes, and to 5 centimes below when it does not reach 2 centimes 5 millimes.

Art. 47.—*Combustible or Explosive Materials, Dangerous Objects and Animals.*—Combustible or explosive materials, such as gunpowder, fulminating powders, percussion caps, fireworks, chemical matches, phosphorus, ether, dangerous animals and objects for which the regulations of the police prescribe special precautions, are excluded from trains carrying passengers. In consequence the tariff of high speeds is not applicable to them.

Art. 48.—*Packing and Condition of Goods.*—The company are not bound to accept, unpacked, merchandise that is usually packed in commerce.

They are not bound to accept merchandise defectively packed, nor that which presents evident traces of deterioration.

They do not accept the transport of objects of which the dimensions exceed that of the vehicles.*

Art. 49.—*Declaration.*—Every dispatch, *except luggage*, must be accompanied with a declaration, dated and signed, indicating—

1st. The name and address of the sender.

2nd. The name and address of the receiver.

3rd. The number, weight, and nature of the packages to be dispatched, their numbers, marks, or addresses.

4th. The mention whether to be sent to the residence or to remain at the station, according to whether the goods are to be carted or not. (Without this mention the goods will be sent to the residence in localities where there is a service of porterage.)

5th. The mention whether carriage to pay or carriage paid.

6th. The sum to be carried on.

If any packages ought to pay Government or custom-house duty the sender should furnish the company such documents and instructions as are necessary, in order that the transport and the transmission of these packages may not suffer any delay or hindrance.

Art. 50.—*False Declarations.*—If the company has reason to presume there is fraud in the declarations made in the nature of the merchandise, it can compel, either at the departure or the arrival, the opening of the packages. A *procès verbal* is prepared of this operation.

Art. 51.—*Payments.*—Despatches are sent carriage unpaid or paid, according to the will of the sender; nevertheless, articles subject to deterioration or without value are only received carriage paid in advance.

Art. 52.—*Disbursements.*—The advance, at departure, of expenses or disbursements to which an expedition may be liable is only obligatory from company to company, and on the transit from one railway to another.

Art. 53.—*Repayment.*—The sums following the dispatches under the title of repayment are subjected, on return, to the tax attached in the general tariff to the transport of finances.

Art. 54.—*Letter of Carriage and Receipt.*—Every dispatch shall be verified, if the sender demands it, by a "*lettre de voiture*" with a stamp of 50c., of which one copy shall remain in the hands of the company, and the other in the hands of the sender.

In cases where the sender shall not ask for a "*lettre de voiture*" the company shall be bound to deliver him a receipt stating the nature and the weight of the package, the whole price of the transport, and the time in which the transport should be effected.

Art. 55.—*Time occupied in Transport.*—Animals, provisions, merchandise, and any other objects sent are dispatched, transported, and delivered from station to station in the times fixed by the official decree of the 15th April 1859, from which the following extract is taken :—

"Art. 2.—Animals, provisions, merchandise, and any objects for high speed will be dispatched by the first passenger train comprising carriages of every class, and corresponding with their destination, provided they have been presented for registry three hours at least before the appointed time for the departure of the train; in default of which they will be delayed till the next departure.

"Art. 3.—For animals, provisions, merchandise, and any objects passing from one line to another without break of continuity the time for transmission will be three hours, to be counted from the arrival of the train which shall have brought them to the point of junction; and the dispatch to set out from this point will take place by the first passenger train comprising carriages of every class whose departure follows the expiration of this time.

* The normal length of the vehicles adapted to the transport of goods is 6m. 50.

"The time of transmission between the lines which coming to a same locality have not yet a common station, will be extended to eight hours, not including the time during which the stations are closed, conformably to the second and third paragraphs of Art. 5 below, and it will be of the same duration between the different stations of Paris until the service of high speed is organized on the Chemin de Ceinture, the surplus of the conditions stated in the first paragraph of this article remaining applicable in the two last cases.

"Art. 4.—Dispatches are placed at the disposal of the receivers at the station two hours after the arrival of the train mentioned in Art. 2 and 3.

"Art. 5.—Dispatches arriving at night are only placed at the disposal of the receivers two hours after the opening of the station.

"From the 1st o Apri to the 30th of September the stations shall be opened for the reception and for the delivery of merchandise by high speed at 6 o'clock in the morning at the latest, and closed at the earliest, at 8 o'clock in the evening.

"From the 1st of October to the 31st of March they are opened at 7 o'clock in the morning at the latest, and closed at the earliest at 8 o'clock in the evening.

"The disposals of the three preceding paragraphs are not applicable to milk, fruits, poultry, sea fish, and other provisions intended for the provision of the markets of the city of Paris and other towns which shall hereafter be designed by the superior administration, the companies being heard thereon.

"These goods shall be put at the disposition of the receivers both night and day in the time fixed in Art. 4.

* * * * *

"Art. 13.—To the times above fixed shall be added the necessary times for the accomplishment of formalities of the customhouse."

Art. 56.—The senders of carriages and animals are bound to warn the station master of the departure 24 hours at least in advance, by acquainting him with the number and the nature of the carriages or animals which they have to transport.

This disposition does not apply to dogs nor to animals in cages named in Art. 37.

B.

FOR SLOW SPEEDS.

CONDITIONS OF THE APPLICATION OF GENERAL TARIFFS.—GOODS, CARRIAGES, ANIMALS, ROLLING STOCK.

CHAPTER I.

GOODS.

Section II.—*Rates of Transport and Conditions of Application.*

§ 1.—Goods in general.

Art.—The rates to be paid for the transport of goods by slow speed are fixed thus :—

1st class, 16c. - -
2nd class, 14c. - - } per ton and per
3rd class, 10c. - - } kilometre.
4th class, 8c., 7c., or 6c.

According to the distance, viz. :—

8c. on a distance of 200 kilometres and under,

7c. on a distance of 201 to 300 kilometres, with a minimum of rate of 16 f. per ton, not including the cost of manipulation (loading and unloading).

6c. on a distance of 301 kilometres and upwards, with a minimum rate of 21 f. per ton, not including the cost of manipulation.

5th class.—8c., 5c. or 4c. per ton per kilometre, according to distance, viz. :—

8c. on a distance of 100 kilometres and less, the rate not to exceed 5 f. per ton, excluding the cost of manipulation.

5c. on a distance of 101 to 300 kilometres, the rate not to exceed 12 f. per ton, excluding the cost of manipulation.

4c. on a distance of above 300 kilometres, not including the cost of manipulation.

The above rates are to be paid on the "distances d' application," with the exception of those of the 5th class, which are applied on the legal distances by rail.

Note.—Goods of the following designations,—chair and brushwood, garden bells, "cornues," plate-glass, china-ware, jars, porcelain, pottery, and glass-ware dispatched in frames, cases, or crates will be rated on the gross weight, reduced by 10 per cent. for the tare. The cases, &c. will be returned free, except 10c. for registry, on condition that they are sent back taken to pieces, so as not to take up much room on the trucks. This gratuitous transport can only be made of so much as the sender can justify by a ticket at the time of the dispatch of the empty packages, that the transport of the goods that they contained has really been effected by the company. The tickets are supplied to the senders at the station of the departure of the goods. The senders and receivers should conform to the rules of the company with regard to return tickets. Every return ticket having a date of more than two months back ceases to be available, and will be considered as invalid.

The company declines all responsibility for loss, damage, or delay of the empty cases, &c. which they return gratuitously.

Art. 4.—The prices fixed in the preceding article are applicable to parcels or packages weighing separately more than 40 kilogrammes.

Art. 5.—Parcels or packages weighing separately from 0 to 40 kilogrammes inclusive are charged whatever class they belong to at the rate of 25c. per ton and per kilometre, the rate not exceeding in any case that of a dispatch of the same kind weighing more than 40 kilogrammes.

However the ordinary tariff of slow speed will be applied to all parcels or packages, though packed separately, if they are part of dispatches weighing together more than 40 kilogrammes of objects sent by one person to another person.

The benefit of the arrangement announced in the preceding paragraph cannot be claimed by messagerie contractors, carriers, or other agents of transport unless the articles sent by them are united in one single package.

Art. 6.—Every parcel or package weighing more than 40 kilogrammes, and containing goods of different classes, is rated according to the price of the highest class, unless the sender justify the nature and weight of the objects, in which case the goods are rated separately, according to the class to which they belong.

Art. 7.—The payment of the charges fixed in Art. 3 and 5 is effected by per indivisible fraction of 10 kilogrammes; whatever be the distance traversed, the minimum of the payment is fixed at 40c. per dispatch, costs of loading, of unloading, and station included.

§ 2.—Gold and Silver Plate, Laces, Objects of Art (Statues, Pictures, Art Bronzes).

Art. 8.—Gold and silver plate, laces, and objects of art (statues, pictures, art bronzes) are rated at half as much again as the price fixed by the ordinary tariff for goods of the first class.

Gold and silver, either ingots, coined, or wrought, platina, jewels, precious stones, and other valuables, are only transported at high speed, consequently the tariff of slow speed is not applicable to them. Mercury, though included in the exceptional tariff in Art. 47 of the "cahier des charges," is rated at slow speed, according to the ordinary price of the first class. (*See* the general classification in classes and in alphabetical order).

§ 3.—Alloyed coinage.

Art. 9.—Alloyed coinage is considered as goods, and rated *according to weight*. (*See* the first class of the general classification.)

§ 4.—Goods not weighing 200 kilogrammes under the volume of a cubic metre.

Art. 10.—Provisions and objects which are not named in the tariff of the "cahier des charges," and which do not weigh 200 kilogrammes under the volume of a cubic metre, are rated at half as much again as the prices fixed by the general tariff, according to the class of the said tariff to which these articles belong, the rate to be paid not exceeding in any case that which would result from the application of the simple tariff to the fictitious weight calculated at the rate of 200 kilogrammes per cubic metre.

§ 5.—Combustible or explosive matters, and dangerous objects.

Art. 11.—Combustible or explosive matters, such as gunpowder, fulminates, percussion caps, fireworks, chemical matches, phosphorus, ether, and dangerous objects for which the police regulations prescribe special precautions, are rated half as much again as the price fixed by the general tariff for merchandise of the first class.

§ 6.—Indivisible masses and objects of exceptional dimensions.

Art. 12.—The rates of the tariff are increased by half for indivisible masses weighing from 3,000 to 5,000 kilogrammes, and doubled for indivisible masses weighing more than 5,000 kilogrammes, but not exceeding 22,000 kilogrammes; but for the masses of more than 10,000 kilogrammes to 22,000 kilogrammes, the charge shall not be less than 25c. per ton and per kilometre.

The company does not accept the transport of indivisible masses weighing more than 22,000 kilogrammes, nor objects whose dimensions exceed those of the vehicles.*

If, notwithstanding the preceding disposition, the company transport indivisible masses weighing more than 22,000 kilogrammes, or objects whose dimensions exceed those of the vehicles, they shall, during three months at least, grant the same facilities to all those who demand them.

In this case, the prices of transport will be fixed by the administration, on the proposition of the company.

In all the stations of despatch or of destination, where there are no cranes or apparatus of sufficient power for the loading and unloading of indivisible masses weighing more than 5,000 kilogrammes, the loading and unloading thereof must be done by the care or at the expense, risks, and perils of the senders or receivers.

Section III.—*Accessory Expenses.*

Art. 13.—*Registration.*—There is to be paid for the registration of merchandise:—A rate fixed at 10c. per dispatch.†

Art. 14.—*Manipulation.*—There is to be paid for the manipulation of merchandise of every kind, the following rates:—1 fr. 50c. per ton for merchandise transported without condition of tonnage; 1 fr. per ton for merchandise mentioned either in the classification or in the present article when transported by full waggon loads of 4,000 or 5,000 kilogrammes, and above.

It is to be paid per indivisible fraction of 10 kilogrammes.

These rates are made up as follows:—

For Merchandise transported without Condition of Tonnage.

1st. Expense of loading at departure	40c.	price per ton applicable per indivisible fraction of 10 kilogrammes.
2nd. Expense of unloading on arrival	40c.	
3rd. Expenses at the station on departure	35c.	
4th. Expenses at the station on arrival	35c.	

For Merchandise transported by full Waggon Load of 4,000 *or* 5,000 *Kilogrammes, and above.*

1st. Expense of loading at departure	30c.	price per ton applicable per indivisible fraction of 10 kilogrammes.
2nd. Expense of unloading on arrival	30c.	
3rd. Expenses at the station on departure	20c.	
4th. Expenses at the station on arrival	20c.	

The rates of manipulation above fixed are payable, whatever may be the means employed for loading or unloading by hand, crane, incline, hoist, basket, &c.

For merchandise hereafter designated, transported by full waggon loads of 5,000 kilogrammes: fire-wood, carpenters' timber, brushwood, bricks, fire-bricks, circles in wood, charcoal, lime, rafters, rags of wool for manure, wedges of wood, coke, boards, rags, vine props, bark to burn, bark for tanning, faggots, pit-coal, laths, thick planks, iron ore, pavement, poles, phosphate of lime for manure, macadamized stones, building stone, rough or lightly worked, planks of wood in general, plaister of Paris, plaister for moulding, stakes, coal dust, wooden beams, billets, sands, girders, logs to burn, tan, sleepers for railways, wood trellis work, and tiles. The senders or receivers may load and unload them at their own expense, risk, and peril, and in that case there will be deducted from the expenses of manipulation 30c. for every operation of loading and unloading.

The station dues are payable in every case.

There is to be paid besides at the junction stations of one railway with another railway, conceded to a different company, one rate of 40c. per ton applicable per indivisible fraction of 10 kilogrammes, and to be divided equally between the two companies, for goods passing from one line to another; and by means of the payment of this rate the expenses of manipulation above fixed (loading, unloading, and station) are only paid once at the first dispatch and at the definitive destination, it being understood, moreover, that the expenses of loading and unloading are not paid for goods transported by full waggon loads of 4,000 or 5,000 kilogrammes and above, when those operations are performed by the senders and receivers.

Despatches weighing from 0 to 40 kilogrammes inclusive, are exempt from every rate of loading, unloading, and of station.

Art. 15.—*Weighing.*—There is to be paid for all goods which, at the request of the sender or receiver, shall be subject to an extra weighing besides that which the company must make at their cost, at departure, to establish the rate; a rate of 10c. per indivisible fraction of 100 kilogrammes and per each additional weighing.

When the weighing takes place by full waggon or cart load, this rate is 30c. per indivisible ton, with a minimum of 1 fr. 50c. per cart or per waggon.

But the above rates are not paid if the extra weighing shall prove an error to the prejudice of the sender or the receiver.

Art. 16.—*Warehousing.*—There is to be paid for the warehousing of goods addressed to the station, and which are not taken away, whatever may be the cause, within 48 hours after a letter of advice from the company has been posted to the receiver, the following rates:—2c. per indivisible fraction of 100 kilogrammes per day for the 15 first days, and 05c. per indivisible fraction of 100 kilogrammes per day for every day beyond. The minimum to be paid is 10 centimes.

The rates above fixed are equally applicable to goods addressed to the residence, when the receiver is absent, or unknown, or refuses to take them in, on condition that advice of these circumstances is immediately sent by the company to the sender or the owner.

In this case the expense of the return of the packages to the station must fall upon the goods.

The same rates of warehousing are to be paid on departure for goods which the company allow at the request of the sender to remain on their platforms or in their warehouses beyond 24 hours from the time of receiving them, the company being only bound to accept goods ready for despatch.

Art. 17.—*Demurrage for Waggons.*—For goods designated, whether in Article 14 or in the classification, as being transported by full waggon loads of 4,000 or 5,000 kilogrammes and above, with power or obligation for the senders or receivers to load and unload, the rates of demurrage for the waggons are fixed as follows:—

On Departure.—The waggons ought to be completely loaded in 24 hours after they are placed at the disposition of the senders; beyond this time a rate of demurrage must be paid of 5 francs per waggon, used or not used, and for every day's delay, whatever may be the contents of the waggon.

On Arrival.—The waggons must be completely unloaded in 24 hours after a letter of advice is posted addressed by the company to the receiver; beyond this delay, the company may, at their option, either unload and be paid for this operation 30 centimes per ton without prejudicing the ordinary rates of warehousing for the goods unloaded, to count from the expiration of the 24 hours above fixed, or leave the goods on the waggons, receiving a rate of demurrage of 5 francs per waggon, and for every day's delay, whatever may be the contents of the waggon.

* The normal length of the vehicles for the transport of merchandise is 6m. 50

† For goods passing over several lines conceded to different companies this rate can only be paid at the station from which the goods are dispatched.

CHAPTER II.

Carriages, Animals.

Section I.—*Prices of Transport and Conditions of Application.*

§ 1.—Carriages.

Art. 18.—The prices to be paid for the transport of carriages at slow speed are fixed thus :—

Carriages with two or four wheels, with one body and one seat inside - - - -	25c.	per carriage and per kilometre.
Carriages with four wheels, with two bodies and with two seats inside, omnibuses, diligences, &c. - - - -	32c.	

Art. 19.—Vans for removing furniture, with two or four wheels, empty, are rated at the price of 20c. each and per kilometre.

Vans for removing furniture when they are loaded pay, in addition to the above price, 14c. per ton of load and per kilometre.

A travelling pass of third class is given to the conductors of one or more furniture vans. This pass is available for going and returning.

Art. 20.—Passengers are not admitted in carriages dispatched by the trains at slow speed.

Art. 21.—The transport of carriages whose dimensions exceed the proper gauge ("*gabarit*") is not accepted.

§ 2.—Animals.

Art. 22.—The prices to be paid for the transport of animals at slow speed are thus fixed :—

Oxen, cows, bulls, horses, mules, donkeys, colts, animals of draught - - -	10c.	each and per kilometre.
Calves and pigs - -	4c.	
Sheep, lambs, and goats -	2c.	

A travelling pass giving the right to accompany the horses is granted for a dispatch of at least three horses, and two passes for a dispatch of at least six horses, but the number of passes will never be increased whatever be the number of horses sent.

These passes are available for the single journey only. Persons who accompany animals and have no pass travel in the carriages of the company, conforming with the regulations in force, and pay the price of third-class places.

Art. 23.—Animals whose declared value exceeds 5,000f. are rated at half as much again as the price fixed by the ordinary tariff for animals of the same kind.

In case of accidents happening to animals in the course of transport, the liability of the company remains limited at 5,000f. per head if the delivery note does not mention a higher value.

Art. 24.—Dangerous animals, for which police regulations prescribe special precautions, are charged at the rate of 25c. per special truck, containing one animal, and per kilometre.

Nevertheless the senders may, at their risk and peril, place several animals in separate and solid cages in one truck by paying for each animal a rate half as much again as that which is fixed in the ordinary tariff for large animals.

25. Small animals, such as—

Cats, sucking pigs, guinea pigs, rabbits, monkeys, squirrels, birds,

placed in cages or baskets furnished by the senders, are rated according to weight in conformity to the prices and conditions of the ordinary tariff of goods of the first class, and for double their real weight, added to that of the cages or baskets.

Dogs, even if they are dispatched in cages, can only be transported by high speed. (*See* the ordinary tariff of high speed.)

Art. 26.—The transport of carriages, horses, and cattle is only accepted at and for the stations provided with embarking platforms.

These stations will be indicated, either by special placards or by the placards intended to make known to the public the order of the service of the trains.

Those which are from this time open for the transport of carriages, horses, and cattle, for starting as well as arriving, are indicated, besides, by an asterisk at the name of the stations.

The superior administration reserves to itself to determine the stations where embarking platforms should be established for carriages, horses, and cattle.

Section II.—*Accessory Charges.*

Art. 27.—*Registration.*—For the registration of carriages and animals there is to be paid a fixed rate of 10c. for each dispatch.

Art. 28.—*Manipulation.*—The following dues are to be paid for the manipulation (loading and unloading) of carriages and animals :—

Carriages - - - -	2f.	each.
Oxen, cows, bulls, horses, mules, donkeys, colts, draught animals -	1f.	per head.
Calves and pigs - - -	40c.	
Sheep, lambs, and goats - -	20c.	

The loading and unloading of dangerous animals, for which police regulations prescribe special precautions, will be effected by the care and at the cost of the senders and receivers, and nothing will be charged for this double operation.

Carriages and animals are subject to no station dues.

Art. 29.—*Warehousing.*—For the warehousing of carriages, which for any cause are not removed in 48 hours from the posting of the letter of notice from the company to the receiver there is to be paid a rate of 1f. per carriage and per day.

Animals which are not received on arrival are put in pound at the cost, risk, and peril of their owners.

The costs of pounding are discharged as part of expenses.

Art. 30.—Small animals, in cages or baskets, carried and rated according to the statements of Art. 25, are subject, as concerns accessory charges, to the same rates and conditions as goods at slow speed.

CHAPTER III.

Rolling Stock.

Section I.—*Prices of Transport.*

Art. 31.—The transport of rolling stock by slow speed is rated as follows :—

Waggon or carriage suitable to carry 3 to 6 tons - -	15c.	each and per kilometre.
Waggon or carriage suitable to carry more than 6 tons -	20c.	
Locomotive, weighing from 12 to 18 tons (not drawing a train) -	3f.	
Locomotive, weighing more than 18 tons (not drawing a train) -	3f. 75c.	
Tender, of 7 to 10 tons - -	1f. 50c.	
Tender of more than 10 tons -	2f. 25c.	

Section II.—*Accessory Charges.*

Art. 32.—*Registration.*—For the transport of rolling stock there is to be paid a fixed rate of 16c. per dispatch.

Art. 33.—*Manipulation.*—At departure, rolling stock is unloaded from the vehicles that have brought it to the stations of the railway and placed on the rails; on arrival, it is loaded on the vehicles that are to take it away, all at the cost, risk, and peril of the senders and receivers, and nothing is charged for this double operation nor for the station operations.

Art. 34.—*Weighing.*—For rolling stock, which, at the request of the sender or receiver, is subject to extra weighing, besides that which the company must effect at its cost, at departure, to determine the charge, there shall be paid the following rates per vehicle, and for each additional weighing :—

For waggons or carriages - -	1 f. 50 c.
For locomotives or tenders - -	3 f. 0 c.

However these dues are not to be paid if the additional weighing proves an error committed to the prejudice of the sender or receiver.

Art. 35.—*Warehousing.*—For the warehousing of waggons, carriages, locomotives, and tenders which are not taken away, for any cause within 48 hours from the posting of the letter of notice addressed by the company to the receiver there is to be paid a rate of 5 f. per vehicle and per day.

CHAPTER IV.

General Dispositions.

Art. 36.—*Distances.*—Every part of a kilometre is paid as if it had been a whole one.

For every distance less than six kilometres payment is made as for six kilometres.

Art. 37.—*Fractions of Weight.*—The weight of the ton is 1,000 kilogrammes.

Fractions of weight are only counted by 100ths of tons or 10 kilogrammes; thus every weight between 0 and 10 kilogrammes must be paid as 10 kilogrammes; between 10 and 20 kilogrammes as 20 kilogrammes, &c.

Art. 38.—*Calculation of Rates.*—The total rating of a dispatch of the same nature is effected by rounding the numbers to 5c. above when it reaches 2c. 5m.; and to 5c. below when it does not reach 2c. 5m.

Art. 39.—*Explosive or Inflammable Materials, Dangerous*

Animals and Objects.—The company only accepts the transport of explosive or inflammable materials, such as gunpowder, "fulminates," percussion caps, fireworks, chemical matches, phosphorus, ether, dangerous animals and objects, for which police regulations prescribe special precautions, with the measures of precaution prescribed or to be proscribed by the minister of agriculture, of commerce, and of public works.

Art. 40.—*Packing and Condition of Goods.*—The company are not bound to accept, *unpacked*, goods that are usually packed in commerce.

Nor are they bound to accept goods with a packing that is defective, or which present evident traces of deterioration.

Goods, susceptible of being confounded with other goods of the same nature, or contact with which might be hurtful, such as, potatoes, coal, sulphur, &c. are only accepted "en Vrac" by whole truck loads, unless, the load being insufficient, the sender consents to pay the rate of a whole truck.

Art. 41.—*Declarations.*—Every dispatch should be accompanied by a declaration, dated and signed, indicating—

1st. The name and address of the sender.
2nd. The name and address of the receiver.
3rd. The number, the weight, and the nature of the packages to be dispatched, their numbers, marks or addresses.
4th. The mention *at residence* or *at station* according to whether the goods should be carted or not (in the absence of this mention, the goods will be addressed *at station*).
5th. The mention whether prepaid or to be paid.
6th. The sum to be carried on.

If it is a question of packages subject to Government or custom dues, the sender must furnish to the company such documents and information as are necessary, in order that the transport and transmission of these packages may suffer no delay or hindrance.

If it is a question of goods, indicated in the classification by classes as being transported without responsibility for the damages and injuries on route, the sender must, in order to have the benefit of the reduced price, reproduce in his declaration the words: "*sans responsabilité des avariès ou déchets de route.*" In default of this mention, the rate will be applied according to the class to which the goods belong when they are transported under the ordinary conditions of responsibility.

Art. 42.—*False declarations.*—If the company has reasons for presuming a fraud in the declarations made of the nature of the goods, they can, either at departure or on arrival, exact the opening of the packages.

A *procès verbal* is prepared of this operation.

Art. 43.—*Payment.*—The dispatches are effected at the will of the sender, carriage paid or unpaid; however, articles subject to deterioration, or without value, are only received carriage paid in advance.

Art. 44.—*Disbursements.*—The advance at departure of the costs or expenses to which a dispatch may be subject, is only obligatory from company to company, and on the transition from one railway to another.

Art. 45.—*Reimbursements.*—The sums which follow the dispatches under the title of repayment are subject on return to the rate attached in the general tariff of high speed for the transport of finances.

Art. 46.—*Carriage Note.*—The company only accept for the cost of the stamp (0 f. 50 c.) the expense of carriage notes furnished by the senders.

They are not bound to accept carriage notes payable on return.

Art. 47.—*Carriage Note Receipt.*—Every dispatch will be verified if the sender require it, by a carriage note, of which one copy shall remain in the hands of the company, and another in the hands of the sender. In case the sender does not request the ticket, the company will be bound to give him a receipt which will announce the nature and the weight of the packages, the total charge of the transport, and the time in which that transport should be effected.

Art. 48.—*Time of Transport.*—Animals, provisions, goods, and objects of whatever kind by slow speed, are dispatched, transported, and delivered from station to station in the times fixed by the ministerial resolution of the 15th April 1859, of which the following is an extract:—

"Art. 6.—Animals, provisions, goods, and objects of whatever kind by slow speed, will be dispatched on the day following that on which they are given in.

"Art. 7.—The duration of the journey for transports by slow speed will be reckoned at the rate of 24 hours per indivisible fraction of 125 kilometres. Surplus distances up to 25 kilometres, inclusive, will not be counted. Thus, 150 kilometres counts for 125, 275 for 250, &c.

"Art. 8.—For animals, provisions, goods, and objects of whatever kind passing from one line to another without break of continuity, the time of dispatch fixed in Article 6 will only be counted to the original station and only once; but one day is allowed to the companies for transmission from one line to another, the duration of the journey for each company remaining fixed, as in Article 7.

"However, at Paris, for the transmission from one station to another by the Ceinture railway, the time will be two days, but it will include the duration of the journey on the said railway. The time of transmission, between lines which come to the same place and have not yet a common station, will be extended to three days, the remainder of the conditions announced in paragraph 1st of this Article remaining applicable in this latter case.

"Art. 9.—The dispatches will be placed at the disposal of the receivers on the day following their actual arrival at the station.

"Art. 10.—The total time resulting from the Articles 6, 7, 8, and 9, will be alone obligatory on the companies.

* * * * *

"Art. 12.—From the 1st April to the 30th September the stations will be opened for the reception and the delivery of goods by slow speed, at 6 a.m. at latest, and closed at earliest at 6 p.m. From the 1st October to the 31st March they will be opened at 7 a.m. at latest and closed at earliest at 5 p.m.

"By exception, Sundays and holidays, the stations for goods by slow speed will be closed at 12 a.m., and the deliveries which remain to be done before the end of the day will be portioned to the first half of the following day. In the latter case the time fixed for the payment of the rates of warehousing, either by general tariffs or by special tariffs confirmed by the superior administration, will be increased by all the time included between mid-day and the hour appointed in paragraphs 1 and 2 of the present Article for the closing of the stations.

"Art. 13.—To the times fixed above will be added the time necessary for the accomplishment of the formalities of the custom house."

TABLE of the TIME of TRANSPORT from STATION to STATION of ANIMALS, PROVISIONS, GOODS, and OBJECTS of whatever Kind dispatched by Slow Speed.

Distance in Kilometres.	Time of Dispatch in Days.	Duration of Journey in Days.	Total Time in Days, excluding those of giving in, and Delivery.
From 1 to 150 kils. inclusive	1	1	2
„ 151 to 275 „ -	1	2	3
„ 276 to 400 „ -	1	3	4
„ 401 to 525 „ -	1	4	5
„ 526 to 650 „ -	1	5	6
„ 651 to 775 „ -	1	6	7
„ 776 to 900 „ -	1	7	8
„ 901 to 1,025 „ -	1	8	9
„ 1,026 to 1,150 „ -	1	9	10
„ 1,151 to 1,275 „ -	1	10	11
„ 1,276 to 1,400 „ -	1	11	12
„ 1,401 to 1,525 „ -	1	12	13
„ 1,526 to 1,650 „ -	1	13	14

Note.—This table only presents directly the estimation of the times for the transports effected by slow speed on one single system of railways. It will, however, serve for calculating the times relating to transports which require several lines conceded to different companies and connected together without break of continuity.

The operations to be made in this case consist of—

1st, To count *separately*, for each distinct line, the times of the 3rd column (duration of journey).

2nd. To add to the total thus obtained one day for the dispatch at the original station of departure.

3rd. To increase this last total by *as many days* as there are junctions connecting the distinct lines. The general total obtained by means of these three operations, *excluding the day of giving in and that of delivery*, is the result sought for.

The Ceinture railway round Paris is always considered as a distinct line, except that, in case of *transit one day only*, of supplementary delay, for the two points of juntion, binding the Ceinture to the adjoining lines, is to be counted.

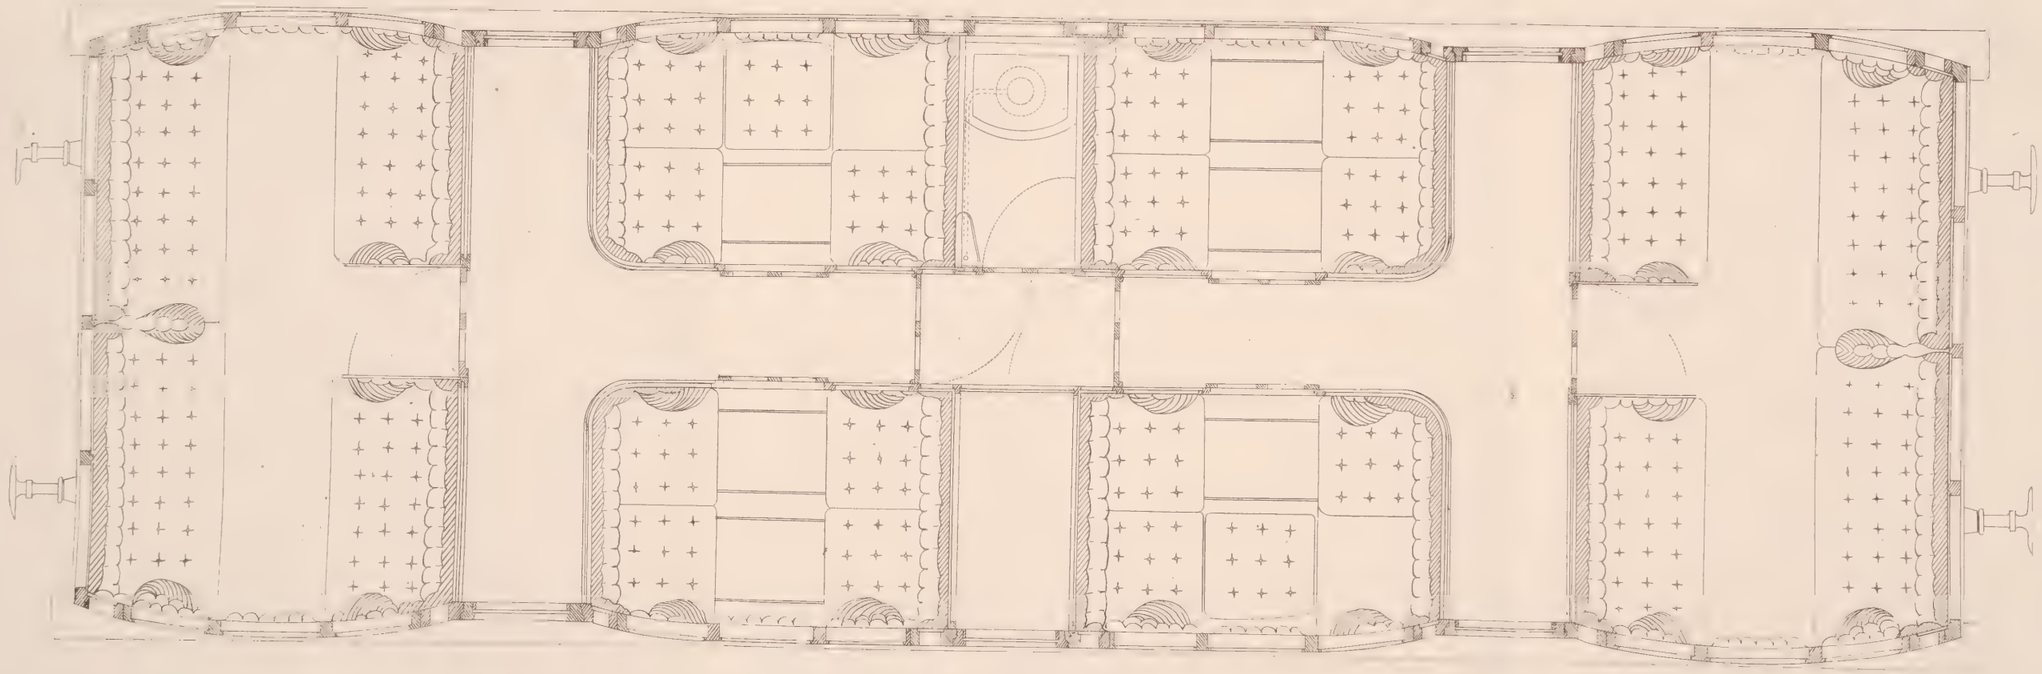
It is besides to be understood that the necessary delays for the accomplishment of the custom-house formalities, are not included in this table.

ROYAL COMMISSION ON RAILWAYS.

Appendix C J.

PLAN OF FIRST CLASS CARRIAGE IN USE ON RUSSIAN RAILWAYS,

Alluded to by Mr Hawkshaw in his answer to Question No. 14,629.



Son limited Lith

Appendix CK.

Information as to the Obligations and Conditions of Transport of Railways in France.

Extracted and Translated from the "Dictionnaire législatif et réglementaire des Chemins de Fer, contenant "le Résumé des Documents Officiels en vigueur, et les principaux Renseignements pratiques sur l'Etab- "lissement, l'Entretien, la Police, et l'Exploitation des Voies Ferrées," *and furnished to the Commission by* Mr. Eborall, *Manager of the South-eastern Railway.* (*See his Evidence, Question* 16,201.)

GRANTS.

I.—*Demands (Petitions, Claims, &c.)*

After the preliminary formalities of inquiry, in which the populations of the places concerned are invited to make known their claims in the matter of the routes of proposed lines, the Minister of Public Works subjects the applications for grants to the following stages of investigation:—

1. The State Engineers and the Chief Inspectors of Roads and Ways have to pronounce, after careful study, upon the various questions of art, outlay, and returns.
2. The Council General on Roads and Ways examine and discuss the projects of the engineers.
3. The Committee of Consultation on Railways then, in their turn, consider the new schemes, principally in the interests of commerce and as regards the financial conditions proposed by the contracting companies.
4. Finally, the schemes and petitions are laid before the State Council, who, at first in committee, and afterwards in general assembly, examine them in all their bearings, and give their opinion as to the conditions of contract and the value of the companies.

Decreeing Grants.—It is only after the fulfilment of these formalities, intended as safeguards of the interests of the localities to be traversed by the new line, as well as in the interests of commerce in general and of the treasury, that the Emperor, upon the report of the Ministers of Agriculture, Commerce, and Public Works, and after having heard the remarks of the other ministers, pronounces, and, if he adopts the project, decrees and signs the grant.

II.—*Conditions.*

Purely financial combinations attaching to railway concessions are not contemplated in the compass of this work. They determine in general or special cases the part taken by the State in the execution of the works; decide the monied assistance of the State and of the localities concerned,—whether this help takes place in the form of a provisory engagement by loans or works to be repaid, in the form of a definitive engagement by means of subventions in money or labour, in the form of a contingent engagement in the way of guaranteeing interest; and finally, they determine the participation of the State in the profits, in the variations in the tariffs, and in the duration of the grants.

The information we here offer applies solely to the clauses and arrangements of the new conditions of contract, which determine in a general and uniform manner the reciprocal rights and obligations of the Government, the companies, and the public in the construction, maintenance, and working of railroads; for which matters we refer you to the different articles of this report under the head "Conditions of Contract."

III.—*Making over or transferring a Grant of a Railway.*

It appears to us unnecessary to quote the numerous documents declaring that a company is not the proprietor of a railway, and can therefore not dispose of a railway without the consent and approbation of the superior authorities. This principle appears sufficiently clearly laid down in two decrees of the Court of Appeal (Cour de Cassation), a summary of which here follows:—

"That treaty or agreement is null and void by which the grantee of a railway hands over to a third party the grant personally made to the said grantee by the State. In the decree pronouncing the nullity of such transfer there is neither an excess of power nor a violation of article 1,134 of Code Napoléon, especially when Government has refused its approbation of such transfer."

Right of Ownership.—The company to whom a railway has been conceded, whether it was constructed by them or by the State, have no real or landed right in the railway, the ownership of which is the State's, it being but a part of the entirety of roads and ways, and forming, in that quality, part and parcel of the public domain. The purely personal right of the company consists in the privileged levy of tolls or the price of transport for passengers and goods, according to the tariffs settled beforehand between the contracting parties.

Redemption, Security, Forfeiture. (Refer to each of these heads.)

IV.—*New Grants of adjacent Lines.*

Government expressly reserves the right of granting new concessions of railroads branching on to lines already granted, or being prolongations of these latter.

Rights contingent on Railway Grants. (*Vide* Correspondences.)

Rights of Third Parties.—Railway companies are bound to maintain and respect the rights over railways accorded to third parties anterior to the granting of such railways.

V.—*Expiration of Railway Grants.*

At the time appointed for the expiration of the grant, and by the simple fact of such expiration, Government will assume all the company's rights in the railway and its dependencies, and will at once enter upon the enjoyment of all the proceeds thereof. The company will have to hand over in good condition the railway and all its appurtenances of whatsoever origin, such as the buildings of the stations and termini, coach-houses, workshops, and depôts, watch-boxes, or gate-houses, &c. Also all such objects, equally belonging to railways, as gates, inclosures, roads—in their normal direction or diverted (slued)—turn-tables, water-tanks or reservoirs, hydraulic cranes, stationary engines, &c. In the last five years which precede the term of the grant Government will have the right to appropriate the revenues of the railway and apply them to the restoration of the railway and its adjuncts, should the company not have taken steps to fulfil entirely and satisfactorily their obligations in that respect. As regards the personal chattels, to wit, the rolling stock, materials for permanent way, combustibles, stores of all kinds, station furniture, station and workshop tools and appliances, the State will be under the necessity, if the company demand it, of taking over all these objects at the value appraisers shall assign to them; and, *vice versâ*, if the State require it, the company will have to cede them in a like manner. However, the State will only be bound to take over such stores, appliances, &c., as may be necessary for the working of the railway during six months.

PORTERAGE (Factage).

Collection and Delivery of Parcels.

I.—*Districts served and General Conditions.* (V. *Cartage of Goods,* Camionnage.)

II.—*Applying the Tariffs.*

Porterage applies, on the one hand, to the collection and delivery of parcels carried by passenger trains (messagerie), and on the other to money and value parcels.

Parcels (messagerie).—The charges naturally vary according to the weight of the packages and the importance of the localities provided with collection and delivery services. In Paris, for example, and other exceptional towns the charge for such service depends on the districts served. Owing to the very situations of the different stations in Paris there is no uniform rule for the levy of porterage charges. The tariffs applied by the greater part of the companies do not, however, differ much from the following figures: 20 centimes for parcels weighing from 1 to 5 kilogrammes inclusive; 25 centimes from 5 to 10 kilogrammes; 35 centimes from 10 to 20 kilogrammes; 40 centimes from 20 to 30 kilogrammes; 45 centimes from 30 to 40 kilogrammes; 50 centimes from 40 to 50 kilogrammes; above 50 kilogrammes the sum of 10 centimes is charged for every 10 kilogrammes or fraction thereof.

For the "eccentric zones" or districts (between the old and new town walls) these rates are generally doubled.

Consignments for the Central Markets in Paris.—Same rates as above for consignments of 50 kilogrammes and under, the charge not to exceed 25 centimes; beyond 50

kilogrammes the charge is 5 centimes for every 10 kilogrammes or fraction thereof.

Ordinary Localities.—The porterage on packages is for the first 5 kilogrammes generally 20 centimes; for packages of from 5 to 10 kilogrammes 25 centimes. To this rate is added 5 centimes for every 10 kilogrammes in consignments up to 50 kilogrammes; and above 50 kilogrammes the charge is 10 centimes for every 10 kilogrammes extra. These figures, be it remembered, are not quoted as invariable bases for all lines, but simply as approximates.

Money and Value Parcels.—In Paris the porterage tariff for value parcels is generally 50 centimes for values up to and including 1,000 francs, and 5 centimes extra for every succeeding 1,000 francs or fraction thereof.

For places beyond the corresponding rates are 30 centimes and 5 centimes.

Undertakings by intermediate Agents.—Porterage (*i.e.*, collection and delivery), when not performed directly by the company, is entrusted to special agents, in conformity with agreements in which the charges are mentioned, and which scarcely differ from those already named. These agreements have to be submitted to the minister for approval, by virtue of Art. 52 of the Conditions of Contract.

III.—*Time allowed for Delivery.—Delays.*

Conditions analogous to those for cartage (camionnage) (of goods).

Checking Parcels.—(V. *Packages* (Colis), *Declaration* (Déclaration), *and Verification* (Vérification).

IV.—*Responsibility and Superintendence.*—(V. *Cartage of Goods*).

V.—*Reforwarding of Packages.*—(V. *Cartage*, § 9, *and Reforwarding.*)

Porters.

(V. *Agents, Camionnage, Factage, and Personnel.*)

The name of porters is generally given to the individuals appointed at stations to receive, weigh, and book parcels, and deliver them to their consignees. At secondary stations porters occasionally perform the work of switchmen, &c. They work the disc signals, see to the cleaning of the station, and on occasion supply the place of station master.

Finally, on some lines the maintenance of the lighting apparatus is confided to the care of porters in the second category, under the supervision of the station master; oil, wicks, and other necessary utensils being provided them for the purpose.

Manipulation of Luggage.—(See *Bagages*, § 4.) We have to remark here that the service rendered by porters *is gratis* as regards the public, for they are paid by the company. They are expressly forbidden to ask gratuities of passengers.

FODDER.

I.—*Conditions of Conveyance.*

Hay, straw, &c. are particularly classed in the category of inflammable substances, which Art. 4 of the ministerial decree of the 15th July 1863 requires should be covered or sheeted with the greatest care. (V. *Matières.*)

II.—*Special Tariffs.*

Chemin de Fer du Nord.—Station to station rate per loaded truck for consignments of hay, straw, and flax in the stalk for journeys of 100 kilometres and under 35 centimes per waggon per kilometre with a maximum of seven francs, including station charges (loading and unloading performed by senders and consignees). For distances of more than 100 kilometres, 30 centimes per truck per kilometre (maximum, ibid., 35 francs per waggon). Latticed waggons specially employed for such transports should be of the following dimensions; length, 4 metres 94 centimetres; width, 2·25.

The company will not be bound in any case to supply stock of greater dimensions,

Lyons Railway.—Rate for conveyance of fodder, &c., 25 centimes per kilometre per waggon load of 5,000 kilogrammes, minimum 10 francs per waggon. Consignments should be announced by the sender to the station master at least three days beforehand.

Orleans Railway.—Charge per waggon for hay and straw over the entire system.

Per truck per kilometre:

For distances up to 100 kilometres -	35	centimes.
„ from 101 to 200 kilometres - -	30	„
„ from 201 and upwards -	25	„

Minimum per truck:

For distances up to and including 100 kilometre - -	14	francs.
„ from 101 to 200 kilometres - - -	35	„
„ from 201 to 400 kilometres - - -	60	„

To enjoy this tariff the sender should supply his hay and straw in trusses well made up. The trucks placed at the disposal of the sender will have the following minimum dimensions: length, 3·20 metres; width, 2·28 metres.

General Conditions.—Prescribed limits of time exceeded at the will of the companies, by five days (Nord and Lyons Railways, by 15 days (Orleans Railway).

(2.) Loading and unloading done by senders and consignees.

(3.) Finally, the application of the other conditions summed up in the article Tariffs, § 13.

TARIFFS.

Numerous Variations.—The frequent modifications which the tariffs of railway companies undergo as regards charges, time allowed, journeys, and conditions vary the economical bearings of these tariffs from day to day. These variations would render such information as we could offer in the matter of statistics and different details quite nugratory. It is therefore only possible to master them by a special study of voluminous collections of tariffs. We shall in consequence confine ourselves here to an abstract of some general principles involved in Art. 42, and others in the conditions of contract, and laid down or established by precedents.

I.—*General Tariffs for Passenger Trains.*

These tariffs comprehend generally conveyance of 1st, 2nd, and 3rd class passengers, children, soldiers, luggage, dogs (in the dog-boxes of luggage-vans).

Also the conveyance of oysters, fresh fish, market provisions, excess luggage, and merchandise of all kinds designated parcels (messagerie).

(1.) Oxen, cows, bulls, horses, mules, beasts of draught; (2.) Calves and pigs; (3.) Sheep, ewes, lambs, and goats may, on the demand of the consignors, be conveyed at passenger train speed: in this case the goods train charge is doubled and the impost added. Two or four wheeled private and public carriages may also be conveyed at passenger train speed on payment of the doubled tariff.

Finally, passenger train service comprises specially the transport of funeral carriages and coffins, bullion, values, and objects of art.

We have given elsewhere in this report detailed references upon the different objects of transport. (See *Animaux, Bagages, Colis, Denrées, Factage, Finances, Messagerie, Marchandises, Voitures, Voyageurs.*)

II.—*General Tariffs for Goods Trains.*

Conveyance by goods trains, mentioned in Art. 42 of Conditions of Contract, comprehend the animals (before named); goods in the three classes (v. *Classification* and *Marchandises*); waggons, trucks, locomotives, tenders, and carriages of all kinds. (V. *Matériel* (rolling stock) and *Carriages*, Voitures.)

Special conditions are applied to large masses of more than 3,000 kilogrammes weight (see *Masses*), and the conveyance of wood and iron in lengths of more than 6½ metres. (See *Marchandises* and *Camionnage.*)

Tariffs for Camionnage (Cartage of Goods), *Factage* (Collection, &c. of Parcels), *Magasinage* (Warehousing), *Omnibuses.* (See the words.)

III.—*Exceptional Tariffs.*

Besides the particular arrangements in force with the different companies under the approbation of the minister for the conveyance of large masses and pieces of wood and iron longer than 6½ metres, *i.e.*, longer than the ordinary vehicles, "the prices fixed in the Conditions of Contract " are not applicable to the following objects, for the con- " veyance of which the authorities have reserved the right " of annually regulating the tariffs both per *grande et petite* " *vitesse* upon the motion of the companies":—

"(1.) Provisions (for the markets) and articles not specially named in the tariff, and not weighing 200 kilogrammes, and occupying less room than a cubic metre. (See *Denrées* and *Marchandises.*)

"(2.) Inflammable or explosive articles, animals, and dangerous articles, for which the police regulations prescribe special precautions. (V. *Animaux* and *Matières.*)

"(3.) Animals, the declared value of which exceeds 5,000 francs. (V. *Animaux.*)

"(4.) Gold and silver coined, wrought, or in ingots, plated ware, mercury, platinum, jewels, lace, precious stones, objects of art, and other values. (V. *Finances.*)

"(5.) And finally packets, packages, excess luggage weighing separately 40 kilogrammes or less." (V. *Colis* and *Messagerie*.)

The ministerial decrees of the 30th May and 30th December 1862 fixed for the year 1863 the prices and conditions of the exceptional tariffs just enumerated, but it does not seem necessary to reproduce here those prices and conditions, as they figure already in our report under the various articles to which they apply.

It is, moreover, a principle that when the renewal of the exceptional tariffs to be annually decreed by the authorities has not taken place in fit and proper time, the said tariffs are prorogued by law, and none the less so as regards senders.

Accessory Charges.—This last provision applies also to the collection or levy of incidental charges, the tariff of which is annually regulated by the minister. (V. *Frais Accessoires*.)

Special Tariffs.—(V. farther on.)

IV.—*Minimum Weight admitted into the Tariffs.* (V. *Colis, Messagerie*, and *Tonnage*.)

Weighing of Packages.—(V. *Pesage*, Weighing.)

V.—*Kilometrical Basis, &c.*

"Companies can levy no charge but by virtue of the confirmation of the minister. (V. *Homologation*, Official Confirmation.)

"The charge is according to the number of kilometres run. Every part of a kilometre considered as a whole one. A less distance than six kilometres is reckoned as six whole ones."

Exceptional Modes of Computation.—(V. *Distances*.)

"When companies have to submit to the administration tariffs of *fixed charges*,* they are directed to add to the explanatory report accompanying their proposals a note showing the kilometrical basis of these tariffs. This note is intended like the report itself to serve as a private element of appreciation for the administration and for the use of the officers of supervision."

Plurality of differing Tariffs.—(See hereafter.)

Minimum Charge.—"For whatever distance, and whether by fast or slow trains, the charge is not to be less than 40 centimes."

"*Cereals.*—In the case where the hectolitre of wheat should rise in the chief regulating market to 20 francs and upwards, Government may require of railway companies that the tariff for the transport of wheat, grain, rice, maize, flour, farinaceous vegetables, including toll, shall not, at the most, exceed 7 centimes per ton per kilometre."

The last Commission of general inquiry on the working of railways (1863) decided "that the clause relative to the "conveyance of cereals should continue to be inserted in "the Conditions of Contract, mention of a special regu- "lating market being in all cases replaced by that of the "Paris market, and the price of wheat, beyond which the "tariff will be reduced, being uniformly fixed at 20 francs "per hectolitre."

VI.—*Tariff Proposals.*

"Companies shall prepare a table of the prices they propose to charge, within the limit of the maximum authorized by their Conditions of Contract, for the conveyance of passengers, cattle, goods, and different objects, and send at the same time copies to the Minister of Public Works, to the prefects of the departments through which the railway runs, and to the chief engineers and inspectors of government supervision."

Companies shall, moreover, as speedily as possible, and in the forms prescribed in the preceding article, submit their propositions to the Minister of Public Works for charges not determined by their conditions of contract, and concerning which the minister is called upon to enact.

Placarding Tariff Propositions.—(See *Affichage*, Posting.)

Communicating with the Chambers of Commerce.—(See farther on.)

Examination.—As a rule the opinions of the service of Supervision should reach the minister at the latest a fortnight after the tariffs have been sent in by the railway company.

Provisory Approval.—If the examination of the proposals of the company appear likely to take up time, the Engineer-in-Chief of Government supervision should, in company with the superintendent of the traffic, make a summary or superficial study of them, and transmit to the minister, at the expiration of the allotted fortnight, dating from the placarding, an intermediate or provisory decision, informing him if it be advisable to allow the new tariffs to be applied *provisorily*, subject to a definitive decision, or to call upon the company to defer the new levy. It must be clearly understood that this mode of proceeding is to be resorted to with the least possible frequency.

Definitive official Confirmation and Publication.—(V. *Homologation* and *Publication*.)

New Formalities of Confirmation.—(V. *Homologation* in the Appendix; v. also the present article.)

VII.—*Reduction of Rates.*

"In cases where companies should judge fit either on the total length, or on parts of the railroad, to reduce, conditionally or otherwise, below the limits determined by the tariff, the charges which they are authorized to levy, such reduced charges shall only be raised again after a lapse of of at least three months with regard to passengers and of a year for goods.

"In cases of reduction in the tariffs, the reduction shall bear proportionately on the toll and on the transport.

"Every tariff modification proposed by the company shall be announced a month previously by placards."

The company will give notice of these modifications to the Minister of Public Works, to the prefects of the departments traversed, and to the chief engineers and inspectors of supervision. The formalities mentioned are obligatory either as to reducing or raising the rates,

Augmenting the Tariffs.—The last Commission of general inquiry on the working of railways declared "that it would "be useful, on principle, to diminish the time allowed by "the Conditions of Contract for augmenting the tariffs for "increasing the tariffs for goods."

Levying the Charges.—"At the expiration of the month from the day of posting up the alterations, the said charges may be levied, if, in the interval, the Minister of Public Works have confirmed them.

"The collection of the charges shall take place indiscriminately and without favour.

Mistakes in applying the Rates.—(V. *Taxes*.)

Publishing the Ministerial Alterations.—"If modifications in some of the prices published are ordered by the Minister, the rates, as altered, will have to be republished, and can only be brought into operation in a month's time from the date of their being published."

The provisions of Art. 49 of the Ordinance of the 15th November 1846, just mentioned, are general and absolute both as regards the public and as concerns private undertakings. Contravention of this article renders a railway company liable to penalties awarded as per Art. 21 of the law of 1845.

VIII.—*Proving Publicity.*

In order that the spirit of the law may be complied with it is necessary—

"(1.) That the publicity afforded to the tariff proposals be sufficient.

"(2.) That the placarding during one month be regularly proved.

"(3.) That the superior authorities should have been put in a condition, in the interval, to form their decisions and notify them to the companies."

Communication with the Chambers of Commerce and various Formalities.—The aforenamed circular of the 31st October 1855 invited the "ingénieurs en chef du contrôl to show "if each locality receives posters, and in what number, at "what points the placarding is done, and how the preser- "vation or renewal of the bills is provided for; if there be "occasion for instructing the companies to post one at the "town-hall, and to have direct communication with the "Chambers of Commerce." Consequent on the inquiry made on the subject, the minister instructed the prefects to communicate regularly to the Chambers of Commerce:— "1, the tariff proposals presented by the companies;" "2, "the prefectorial decrees pronounced in the execution of "the decisions respecting these tariffs."

As for the interval of a month from the publishing of the tariffs and the putting of them into force, it is important to be strict in the matter, the directors being, however, free to judge whether the public are interested in the new rates coming into force before the expiration of the interval prescribed by law.

Account was also rendered to the minister of the material fact of the placarding, and when it took place, by attaching to the papers a copy of the bill.

Visa affixed to the Bills.—To conform to a ministerial decision of the 2nd December 1853, "station masters were "required to get verified, either by the commissioners of "supervision or by the mayors of the communes where "are situate the stations, which have no special agent of "supervision, the bills intended to notify to the public the "tariffs or their modifications put forward by the company "for official confirmation."

Neglecting to publish Tariff Alterations.—A company having reduced their tariffs, and not fulfilled the require-

* Not founded on a kilometrical basis.

ments of their conditions of contract, *i.e.*, not having placarded the alterations a month previously, is liable for damages towards a carrier whom this competition may have injured.

Expenses of Publishing.—The formalities of publishing the tariffs are gone through at the company's expense.

IX.—*Binding nature of the Tariffs.*

"As soon as they have been approved and published in the legalised form, the tariffs, fixed or modified by the superior administrative authorities, become binding for and against the railway company, just as the Conditions of Contract annexed to the laws of concession, and it behoves neither the civil jurisdiction nor the tribunals of commerce to criticize or trammel their execution."

"It is not, for instance, allowed that a tribunal should impose on a company a shorter allotment of time and a reduced charge under the pretext, that, by the very nature of the thing, a contract modifying the tariffs must be regarded as having intervened between the sender and the railway company." (Court of Appeal, 19/1/58.)

But the judicial authority is qualified to consider whether, for instance, the approved rates and the prescribed conditions have been properly applied.

Claims.—It follows from what has been said, that the minister alone is competent to take cognizance of motions for the establishment and modification of tariffs. "Prefects "are not qualified to examine such claims; they must refer "such matters to the minister, adding thereto, if need be, "their remarks."

"Ordinary tribunals may, on the other hand, be appealed "to for the restoration of money charged by a railway "company on the strength of tariffs not authorized and "published in the regular way." Such a claim is appropriately made before the tribunal of the place where the goods where handed to the railway company.

X.—*General Cartage and Porterage Tariffs (Collection, &c. of Goods and Parcels).*—(V. these words).

XI.—*Formalities applicable to all Tariffs.*

The general rules respecting placarding, official confirmation, and publicity, just indicated, for general goods and parcels tariffs apply equally to the different tariffs hereafter to be treated of, excepting, however, *international tariffs* regulated by special provisions.

XII.—*Differential and Subscription Tariffs (i.e., Guaranteed or Contract Tariffs).*

The tariffs submitted for approval to the superior authorities are generally without anomalies, *i.e.*, contain no conditions rendering, to give an example, the rate for a longer distance lower than that for a shorter; but the administration is sometime invited to authorize the application of rates which do not present for all intermediate or fractional distances a uniform kilometrical basis; hence the origin of differential tariffs, not to be confounded with "subscrip- "tion tariffs (suppressed by ministerial decree of the 25th "January 1860), in accordance with which senders under- "took to send all their consignments by the railway to the "exclusion of all other modes of transport."

"It concerns the administrative authorities alone to appreciate the various matters which may decide the rejection or confirmation *of a differential tariff establishing between the extreme points of a railway rates proportionally lower than those for intermediate points.*"

"It is of the sovereign power of the judge to decide if an entire run between two extreme points has been performed in one distinct journey or two, and if, consequently, a single tariff should be applied or two."

Stations not specified.—"Consignments from intermediate stations have the right to profit by the differential tariffs made by railway companies between their extreme limits."

The ministerial approval generally respects this latter principle in all reduced tariffs, the benefit of which reduction is not enjoyed *by some of the intermediate stations*, especially as regards the greater part of the special tariffs to be treated of hereafter. (§ 13.)

Ordinary tribunals are, moreover, competent to consider whether the advantages of the altered tariffs of a railway company extend to such and such a station of the railway.

In the absence of a special clause in the tariffs and in the case of claims respecting stations not specified, "the reduc- "tion is only available for the space of time involved "between the moment the claims have been recognized as "having foundation and the moment when the epoch "during which the reduction existed expires."

XIII.—*Special reduced Tariffs.*

On all railways companies have adopted, with authorization, special tariffs for different objects of transport by *grande et petite vitesse* already comprised in the general tariffs derived from Art. 42 of the Conditions of Contract. We shall now give a summary of some of the conditions governing these special reduced tariffs:—

Grande Vitesse (Passenger Train Speed).—Reductions in the tariff are ordinarily granted for certain lines or parts by *grande vitesse*, as regards travellers, milk, and market provisions; but every latitude is allowed the companies in these reductions, which cannot be imposed on them, as they are beyond the terms of the Conditions of Contract. (V. *Billets* (Tickets), *Denrées* (Provisions), *Huitres* (Oysters), *Lait, etc.* (Milk, &c.)).

The same remarks apply to the various articles of conveyance by *petite vitesse*, to be treated of hereafter.

Petite Vitesse.—Among the special reduced tariffs, applicable chiefly to consignments (by goods trains) of the most ordinary description of goods, we will cite, as figuring in the tariff books of the different companies, those referring to the transport of cattle, race-horses, cotton, manure, stallions, iron and brass, fodder, flour, grain, &c., crockery, coal, coke, oil, agricultural instruments, wool, liquids, building materials, rolling-stock, furniture (loose), ore, stone for macadamizing, plaster stone, free-stone, paving ditto, granite, &c., apples and pears, salt, sugar, tallow, &c. We have indicated, at least compendiously, in the course of this report the different rates for the objects named.

Certain exceptional operations are equally the subject of special tariffs. Such are, the passing of goods through the customs, weighing at certain stations, unloading from railroads and transferring to canals, &c. Tariffs for goods carried on private branches should also find a place in the collection of special tariffs of each company. Finally, the special tariffs should give a list of the goods of a less weight than 200 kilogrammes per cubic metre, subjected to the augmentation of 50 per cent.

Various Conditions in special Tariffs.—We have now to recapitulate the chief conditions attaching generally in entirety or in part to the special tariffs in use on the different lines of railway.

Non-guarantee Clause.—The words "without responsibility" in the classification annexed to the general tariffs with regard to certain articles conveyed at reduced rates apply to deterioration and loss in transit. Consequently, railway companies in their special tariffs declare themselves exempt from all responsibility for waste or loss and deterioration in transit. (It has, however, been laid down in cases tried that they are responsible for damage in transit attributable to negligence on the part of the servants of the company, and with the following quotation we conclude the references we have already given on the subject under the article *Avaries*, Damage):—

"One of the conditions (nearly invariable) of the application of special tariffs is *that* by which companies declare themselves not responsible for damage or loss in transit. This stipulation does not make them irresponsible when the damage, the subject of the claim, must be attributed, on the face of the documents from which the judges have had to form their decision, to the negligence or want of precaution of those charged with the conveyance of the goods."

(2.) Manipulation.—The loading and unloading of the waggons are generally done under the care and at the expense of the consignees; the companies then levy only the station charges. (See *Frais*, Expenses.)

Senders of loaded waggons should give railway companies a preliminary notice of 24 or 48 hours; and, on their arrival, goods should be taken away by the consignees within the periods allotted in the tariffs, in default of which demurrage charges will be levied.

(3.) Prolonging the Time allowed for Transit.—Companies reserve, moreover, the right of prolonging up to a certain limit the delays allowed by the Conditions of Contract.

(4.) Tonnage Conditions.—The greater part of consignments anticipated by special tariffs are charged for per waggon-load of 4,000, 5,000, and even 10,000 kilogrammes, or by paying by weight if advantageous to the sender.

(5.) Minimum Charge.—Companies, when they apply a special tariff for certain distances, stipulate sometimes for a minimum charge, varying according to the distance divided into zones: (1) up to 100 or 150 kilometres; (2) from 100 or 150 to 200 or 300 kilometres; (3) upwards of 300 kilometres, &c.

(6.) Minimum Distance.—Of some goods consignments at reduced rates for less distances than 50 kilometres, 100 kilometres, &c., are not admitted.

(7.) Advantage conferred on intermediate Stations.—(V. above.)

(8.) Obligatory Choice between the general and special Tariffs.—We have pointed out hereunder (§ 14) the formalities to be fulfilled concerning the preliminary declaration to be made by the sender, and the rejection of claims arising out of this measure.

(9.) Tariff applying by Weight (and not by the Number of Articles).—(V. *Expédition* Consignments.)

(10.) Empty Packing Cases, &c. returned free.—Empty bottles, vases, bags, frames, cases, baskets, &c. are returned free on showing the *lettre de voiture* or the stamped *récépissé* which accompanied the consignment; but we do not think that this allowance is made on all lines, nor, especially, is it applied to all kinds of goods.

(11.) Maintaining of certain Conditions in the general Tariffs.—Finally, it is expressly repeated that the terms of the general tariffs which are not modified by the special, are preserved in force.

The Propositions of the special Tariffs.—"Companies, instead of limiting themselves to one single despatch, should accompany each proposition with an explanatory report, allowing the motives of the propositions to be judged with a thorough knowledge of the case. These proposals should be recapitulated in a bill to serve as a basis for the prefectoral decision. Finally, the alterations or additions suggested will be indicated in red ink on a copy of the tariff annexed to the papers."

Plurality of Special Tariffs.—In combining to the profit of a consignor the advantages of two special tariffs have no connexion with or dependence on each other; the first judges interpreted them wrongly, and extended the advantages of each of the two tariffs beyond the case for which it was made, and in the eye of which each tariff had imposed a correlative charge; but when it is a question of conveyance partly over a main line and partly over one of its branches, and when different tariffs are applied to the different parts of the journey, the tribunals are not to decide upon the lowest tariff alone; they must combine these different tariffs in order to fix the total price of transport.

XIV.—*Joint Tariffs and combined Tariffs.*

In law distinction is made between joint tariffs concerted between two or more companies, and considered as *maximum charge*, for the conveyance of merchandise from one point of one line to some point of another, and combined tariffs which simply constitute the union of two special reduced tariffs. But this distinction has not been made in the examination by the superior authorities quoted below.

Examination of joint Tariffs.—"Every time joint tariffs or treaties between two lines having termini in Paris are presented to the administration, the inspectors in chief of the interested lines will assemble and make a joint study of them. The examination thus completed, each inspector will commit his conclusions to writing in a special report, which then bearing no longer on details particular to one line, but upon the entirety of the project, will be more calculated to enlighten the administration, to aid them in the examination of the question, and to hasten the solution of the matter submitted to them."

Obligatory Nature.—Combined tariffs by which two railways undertake to convey at reduced rates goods coming from one point of the one line to some point of the other are legal and obligatory after they have been submitted for approval conformably to the provisions of the Conditions of Contract.

"Consequently, a sender at an intermediate point of the distance cannot demand for the partial journey the advantages of the combined tariff for the total distance."

"The principle of radical and absolute equality among senders only exists for tariffs 'considered as maximum 'rate.'"

"But when it becomes a question of reduction by treaties of favour upon the joint tariff, the right of extending the advantages thereof to the public belongs solely to the administration, and senders cannot individually claim the benefit of the treaty without accepting at the same time all the conditions."

Judicial fixing of the Total Charge for Conveyance.—We quoted at the end of paragraph 13 a judicial decision by which tribunals are not to take, in order to estimate the charge for conveyance upon a main line and its branches, the lowest of the tariffs involved, but should combine the different tariffs. This decision applies particularly to the plurality of differing tariffs in force on a single system, and we merely call attention to it here.

Responsibility in the matter of joint Tariffs.—"The engagement by a company undertaking the conveyance of goods from one of their stations to a station on another line binds them, as regards the sender, for the whole distance, without his having to concern himself about the part of the journey on the other company's line."

It has been decided, moreover, "that when two railway "companies have substituted for the joint tariffs (considered "as maximum charge) a combined tariff (union of two re- "duced tariffs), they are not justified in exercising control "over the destination of the goods, provided that consignors, "availing themselves of the advantages of the combined "tariff, conform to the conditions specified."

Various Formalities and Conditions.—In principle, the conditions of the general tariffs not modified by joint tariffs are preserved in force as regards each of the companies.

Preliminary Declaration by the Sender.—The application of reduced special or joint tariffs takes place only upon the express demand of the sender; the tariffs contain on this subject the following clause (approved by Ministerial Circular of the 29th June 1861):—

"The tariff rates will only be applied upon the sender's making the express demand on his declaration. Failing this preliminary demand, the consignment will be rated upon the charges and conditions of the general tariff of each company."

Claims, Competency.—Claims have been addressed to the minister upon this last clause, but the superior administration gave the information by a circular of the 25th November 1861, "That the preliminary declaration has for "its sole object that of proving the accord existing be- "tween the companies and the sender. It therefore "presents in that respect a utility which commerce cannot "disregard."

"An action for a reduction of the rate agreed upon for the conveyance of goods and for damages brought against a railway company and grounded on the transport charges having been paid upon a joint tariff, whereas they should have been paid upon a tariff of reduced rates, is appropriately carried before the tribunal of the place where the goods conveyed were handed to the company."

XV.—*International Tariffs.*

These apply, on one hand, to goods in transit (*i.e.*, traversing France from one frontier to another under Customs' seal), and, on the other hand, to goods for exportation (*i.e.*, sent abroad from a place on French territory).

An imperial decree of the 26th April 1862 made considerable changes in the conditions of official confirmation of transit and export tariffs, and exempted companies from certain preliminary formalities in force for ordinary tariffs. The chief provisions of this decree are the following:—

Transit Tariffs.—"Art. 2. Companies making the application may be authorized by the minister of public works to levy the charges and apply the conditions they may think *best calculated to combat the competition offered by foreign routes.* They will not in this case be tied to any formalities of preliminary placarding or to the observance of any delay either in applying the reduced rates or in augmenting the reduced rates within the limits of the time prescribed by their conditions of contract.

"Art. 3. The companies to whom this authorization shall have been given will communicate to the minister the rates and conditions applied to consignments in transit the day before they are put into force.

"Each tariff of this category should be produced under the form of prices charged, *i.e.*, should show for each kind of goods one complete sum per ton, comprising toll, transport, and accessory charges of all kinds from the frontier of entry to the frontier of exit.

"This total amount will be the same for all sea-ports of the same railway and situated on the same stretch of coast.

"Art. 4. Every transit tariff will be made public before being put into force by placards at all the stations named in the tariff.

"Art. 5. At any moment the minister may prohibit the application of transit tariffs.

Export Tariffs.—"Art. 6. Companies will be *exempted*, as regards reduced export tariffs, from the preliminary *formalities of placarding* prescribed by Art. 49 of the Royal Ordinance of the 15th November 1846.

"They will too be exempted from the obligation imposed by the Conditions of the Contract of not re-raising the rates before the expiration of a year.

"They will have, for tariffs of the kind, to conform to the following regulations:—

"Art. 7. Companies will submit *to the minister* all proposals either for reducing the rates for goods for exportation or for modifying the general conditions (of applying the tariffs) relative to these consignments.

"Art. 8. The proposals of which we are now treating should point out the parts of the line on which the tariffs will be applied (at the departure station) and the duration of time fixed for applying them. This period should not in any case be less than three months.

"Art. 9. If in an interval of five days from the registration of these proposals (in the offices of the administration) the minister does not notify to the companies his objection, the proposed tariffs may be applied provisionally. These tariffs will be immediately made known to the public by placards at all the stations named in the tariff.

"Art. 10. Every time when, after the minimum interval of

three months, fixed by Art. 8, companies wish to re-raise the export tariffs reduced by them, they shall be bound to conform to all the provisions of their Conditions of Contract and of the Royal Ordinance of the 15th November 1846.

"Art. 11. Annexed to every statement of receipts and expenditure each company will transmit to the minister a general table showing the tonnage, the origin, the nature, and the destination of the goods conveyed over their system, as well as the rates and conditions subject to which the conveyance shall have been performed," &c.

XVI.—*Infraction of the Provisions the Tariffs.* (V. above, §§ 8 and 9; v. also *Affichage* and *Pénalté.*

TAXES (Contributions, French).

I.—*Division of the Expense of forming a Railway.*

A law of the 19th July 1845 abrogated the provision of the law of the 11th June 1842, by the terms of which departments and communes contributed towards the formation and construction of railways two-thirds the amount required for the acquisition of land.

II.—*Land Tax.*

On some railways the station masters are authorized to pay out of their traffic cash taxes due by the company in the communes where the stations are situated, or else in the neighbouring communes. The taxes to be paid are determined, moreover, in the following manner.

Railway Land.—"The land tax will be fixed according to the area of land occupied by the railway and its dependencies; the quota will be calculated for the railway, like for canals, conformably to the law of the 25th April 1803. The buildings and warehouses dependent on the working of a railway will be rated similarly with other buildings in the neighbourhood. All the taxes to which these buildings may be subjected will be, like the land tax, at the company's charge." (Article 63 of the Conditions of Contract.)

Apartments for the Company's Servants, &c.—"Lodgings "occupied in the buildings of a railway station are regarded "in the light of a 'locale where a profession or calling is "'exercised,' and are subjected to the proportional duty of "one-twentieth." The company is also charged the proportional duty for their gate-houses and wharves adjacent to their goods stations, as constituting railway dependencies.

Annual Assessment.—"When, in a railway company's deeds of concession, the land tax is decreed to be charged to the company, and to date from the month of July or August only, it is, nevertheless, dating from the 1st of the preceding January that the company should have been taxed."

III.—*Duty on Goods.*

We hold it useless to report here the wording of the instructions and circulars addressed by the Minister of Finances to the excise and custom-house officials superintending railways regarding the collection of the duties on goods. As the formalities customary in such matters are foreign to the properly so-called working of the railway, we shall do no more than quote the following extract from a circular destined to put an end to difficulties which had arisen between the tax collectors and the companies' servants in respect of the insufficiency of the time (*délais*) allowed by the control for the conveyance of beverages:—

"From the year 1858 (Circular of the Finance Minister of the 6th May, No. 536) instructions have been issued to the excise officers that note should be made on the permits, &c., delivered by them of the supplementary *délais* which may be required by the reduced tariffs applicable to the conveyance of goods on which duty, &c., is paid. If difficulties have arisen they are attributable only to the insufficiency of the information furnished to the excise officials by the consignors or by the company's servants concerning the particular conditions under which beverages are conveyed on railways.

"Referring to this despatch, a circular of the Minister of Public Works, dated the 9th of April 1861, requested railway companies to inform the excise officers precisely of the time (*délais*) allowed by the tariffs for the conveyance of beverages. Those delays will be from that time specified on the permits, &c., delivered by the Excise, and thus a recurrence of the difficulties named will be prevented.

Various Duties or Dues.—See *Octroi* (Town Dues), *Patents* (License).

TAXES (Impôts).

I.—*Land Tax.* See *Contributions.*

II.—*Taxes or Duty on Securities.*

Shares and bonds are not subjected to the tax created by the law of the 27th June 1857; but they pay a transfer duty of 20 centimes per 100 francs (4*s.* per cent.) According to the same law this duty, on documents called "bearer" (*au porteur*) and on securities which may be transferred without a transfer deed (? scrip), is converted into an annual and obligatory tax of 12 centimes per 100 francs capital, rated at the medium currency of the preceding year.

"This last tax is payable quarterly, and advanced by the company, who, however, may have recourse against the holders of deeds.

"The duty on securities which can only be transferred by means of a transfer deed is levied at the moment of transfer, on account of the treasury, by the railway companies, who thus, by the act of transfer, become the treasury's debtors.

"At the end of each quarter the said companies are bound to transmit to the registrar a statement of the transfers and conversions effected by them, as well as the state (in the market) of the shares and bonds subjected to the annual tax.

"In companies having securities '*au porteur*' (? scrip), any proprietor of shares and bonds, &c. may at any time convert his scrip into stock, and *vice versâ.*

"In each case the conversion gives occasion for the transfer due." (Law above named, 27th June 1857, ext.)

Foreign Securities.—"Shares and bonds issued by foreign undertakings are subjected in France to duties equivalent to those above-named." (Extract from law of 1857.)

III.—*Duty on Passenger Trains.*

Extract from the law of the 14th July 1855:—"Art. 3. Dating from the 1st August 1855 the tithe of the fares for railway passengers due to the Treasury will be calculated on the total price of the tickets.

"Moreover, there will be levied for the public Treasury a tithe of the charges for conveying goods and all other objects by passenger or fast trains.

"The companies tariffs will be augmented by the amount of the new taxes resulting from the present article."

Provisions.—A ministerial despatch of the 14th of August 1855 notified to the companies concerning the levy of the tax established by the above-mentioned law of the 14th July 1855:—

"1. That no exception should be made for provisions conveyed by passenger trains.

"2. That the tithe should be levied on the total and aggregate price received by the companies, and this without distinction and without reduction in respect of expenses or charges called 'accessory.'"

Conveyance by fast Trains, with Time allotted for Delivery —Finally, "the question whether the new impost should "apply to consignments specified as 'consignments by "'passenger train with time allotted' has likewise been re-"solved in the affirmative." (Annotated Code, L. Fleury.)

Diligences (Vehicles) conveyed on Carriage Trucks.—"The conveyance of diligences by rail on carriage trucks is "not subjected to the payment of duty." (T. Seine, 20th August 1846.)

IV.— *Double Décime.*

The décime (1*d.*), levied in addition to the fiscal dues, originated in Art. 1 (as follows) of the law of the 6th Prairial (26th May) of the year 7 (of the French Republic).

"Art. 1. Dating from the enactment of the present law, there will be levied by and for the Republic and designated as 'war subsidy extraordinary for the year 7' one décime per franc over and above the duty . . . . on public vehicles . . . ."

This duty, temporary in principle, has become definitive.

A second provisory décime even has been imposed and maintained during these latter years, and we do not think it has yet been taken off.

TOWN DUES (Octroi).

III.—*Duties payable by Railway Companies.*

"Companies having obtained grants of railways are sub-"jected, as regards town dues, to duty on fuel consumed "not only in their offices or by the engine which feeds or "supplies the station tanks (*machine d'alimentation*), but "also by the locomotives."

By a recent decree of the Court of Appeal, town dues extend to the fuel consumed in the workshops situated within the limits of the town dues where the rolling stock is repaired. Companies cannot lay claim for such combustibles to the exemption allowed in the case of fuel used in the production of articles intended for general and public commerce. This last decree, specially applicable to fuel consumed by railway companies in their workshops located in the suburban zone annexed to Paris, seems to invalidate, at least partially, a previous decision of the Supreme Court of the 8th July 1861, which exonerated in a general manner from town dues fuel used by railway companies in the construction and maintenance of their necessary utensils and also in repairing their rolling stock.

Dues on Wrought and Cast Iron.—"Liable to town dues

" are only articles of wrought and cast iron used in build-
" ings (*ville de Paris*). Exempt therefore from all dues are
" articles of manufacture to be used in the construction of
" machines."

IV.—*Dues on Goods conveyed.*

"Failing instructions contrary to the parcels ticket (*lettre
" de voiture*), railway companies may consider themselves
" authorized to pay the town dues on 'goods to be de-
" 'livered.'" But on goods to be "left at the station," the payment of town dues appears subject to the following rules laid down in a decree of the Court of Nimes:—

"In opposition to what the 'correctional tribunal' of Orange had decided, the 'correctional chamber' of the Court of Nimes declared that the provision of a law respecting town dues which obliges inhabitants residing beyond the excise offices or toll-houses, but within the limits to which town dues extend, to certify their goods and pay the dues (if any) before housing them, is not applicable to railway companies whose stations, situated within the town due limits, accept articles liable to town dues; it is incumbent on the consignee alone, who causes them to be delivered up to him, and who takes them into the town, to declare the goods and pay the dues."

"Railway companies are likewise not bound to make any declaration or even to fulfil the transit formalities relative to objects of conveyance which are only delayed at their stations to be sent to another destination, even though they should traverse a district where town dues are payable."

Paris, April 28, 1866.

Railways in France pay neither poor nor any local rates.

The Government impose a tax of 10 per cent. upon all grande-vitesse traffic, besides a duty of 20 centimes upon all parcels forwarded or received, and a stamp duty of 50 centimes upon each invoice per petite-vitesse, commonly called "timbre de lettre de voiture."

This immense revenue is collected by the Government every 10 days.

The following sums are paid per annum by the Northern of France:

	Frs.
Traffic duty 10 per cent. - - -	4,000,000
Stamps on shares and bonds - -	265,000
Transfer stamps - - -	658,000
Government duty of 20 centimes per parcel - - - -	730,000
Salaries of the Government inspectors (commissionaires administratifs) -	163,000
Conveyance of Government rural tax collectors and Government officials -	80,000
	5,896,000 frs.

= 235,840*l.*

(Signed) P. T. Bingley.

To C. W. Eborall, Esq.

Appendix CL.

Copy of Contract for Working the North Staffordshire Railway.

Mentioned by Mr. G. P. Bidder in his Answer to Question 16,794.

NORTH STAFFORDSHIRE RAILWAY. — Tender and Contract for the Maintenance of the Rolling Stock and Working of the Traffic of the North Staffordshire Railway.

[a] Here insert "I" or "we." and name or names, with residence and description at length.

[a] do hereby tender for the Contract for the Maintenance of the Rolling Stock and Working of the Traffic on the North Staffordshire Railway upon the terms and conditions hereinafter specified; and, in case the same tender shall be accepted by the said company under their common seal, then in consideration of the monies which according to such terms and conditions will become payable to [b] executors or administrators, by the said company and their successors, and of the several other terms and conditions by which the said company and their successors will then be bound, [c] do, for [d] heirs, executors, and administrators, hereby covenant and agree with the said company and their successors that [e] executors or administrators, shall and will at all times during the continuance of this contract maintain the rolling stock and other property, of which under this contract [f] shall have the care and use, in good repair and condition and efficient working order, and work and conduct the traffic of the said company on and over the line of the said railway, or any part thereof, and on and over the line of any other railway company, with regularity and safety, and in as advantageous a manner to the profit and for the welfare of the said company as might or could be done by the said company if working or conducting such traffic not under contract, but through or by means of efficient servants engaged by them for that purpose, and shall and will well and truly observe, perform, fulfil, do, submit to, and keep all the stipulations, agreements, acts, and regulations hereafter mentioned and set forth, as to be observed, performed, fulfilled, done, submitted to, and kept by the contractor.

[b] Here insert "me, my," or "us, our."

[c] Here insert "I" or "we."

[d] Here insert "myself, my," or "ourselves, our."

[e] Here insert "I, my," or "we, our."

[f] Here insert "I" or "we."

Interpretation clause.

1. The following words and expressions throughout this contract shall have the several meanings hereby assigned to them, unless there be something either in the subject or context repugnant to such construction: that is to say,

Words importing the singular number only shall include the plural number, and words importing the plural number only shall include the singular number.

The words "the company" shall mean the North Staffordshire Railway Company.

The words "the railway" shall mean the main lines and branches of the North Staffordshire Railway.

The words "the rolling stock" shall include all the locomotive engines, tenders, passenger carriages, horse boxes, carriage trucks, luggage vans, goods, cattle, and mineral waggons, and all other vehicles of every kind and description for the conveyance of persons, cattle, animals, goods, wares, minerals, merchandise, or other articles, matters, or things whatsoever on the railway.

The word "vehicles" shall comprise all the carriages included in the definition of rolling stock, with lamps, cushions, mats, fittings, and appurtenances, except engines and tenders.

The words "the mile run" shall apply to the actual mileage traversed by the trains on the main line of rails of any railway or branch railway, so as to exclude all shunting and backing of engines and vehicles.

The word "stores" shall include all coke, grease, iron, water, timber, and other goods, articles, wares, and things requisite for the working and repairs of the engines, tenders, and vehicles of the company.

The word "sheds" shall include all buildings for housing and repairing the rolling stock, with the necessary rails, chairs, sleepers, turntables, sidings, works, and appurtenances thereto.

The words "the traffic" shall include all passengers, cattle, animals, goods, wares, merchandise, minerals, articles, matters, and things conveyed or to be conveyed over the railway, or any portion thereof.

The words "the engineer" shall mean the principal engineer for the time being of the railway company, and recognized as such for the purposes of this contract by the signature of the secretary of the company.

The words "the traffic manager" shall mean the principal agent for the time being of the company for superintending the managing the traffic of the company, and recognized as such for the purposes of this contract by the signature of the secretary of the company.

Term, 10 years.—Determinable by bankruptcy or default of contractor.—Penalty 10,000l.—By company without cause assigned.—Contractor to have compensation.

2. The contract to continue for the term of ten years from the date hereof, subject nevertheless to determination, as follows (that is to say): if the contractor shall become bankrupt or insolvent, within the meaning of any Act for the Relief of Insolvent Debtors, or compound with his creditors, the contract shall immediately cease and determine; or if he shall not duly perform, observe, and keep all and every of the stipulations herein contained, and shall not within the space of 24 hours after notice in writing from the company, signed by the secretary, shall either have been delivered to him or left at his office at Stoke-upon-Trent, repair, alter, amend, observe, perform, or omit,

the default, direction, stipulation, omission, or commission, complained of or referred to in such notice, it shall be lawful for the company forthwith, by another notice in writing, signed by the secretary, and delivered to the contractor, or left at his office at Stoke-upon-Trent, to determine the contract; and immediately to assume the custody of all the sheds, cottages, and other buildings, the rolling stock, engines, water-cranes, tools, implements, plant, machinery, and all other the property and effects of the company which may have been entrusted to the care or charge of the contractor, under and in pursuance and in consequence of this contract, and its maintenance, and the working of the traffic on the railway; and the contractor and his sureties shall, in either of the last-mentioned cases, become liable to pay the company, in addition to any other sums which may be due or recoverable from the contractor, under the contract or otherwise, or by reason of any breach or non-performance of the stipulations herein contained, as liquidated damages, the sum of ten thousand pounds, and that without regard to any difference in degree of loss or damage which can or may be sustained by the company by reason of the different nature of the acts, matters, or things, by which the contract is so made determinable, or authorized to be determined; or if the company shall deliver to the contractor, or leave at his office at Stoke-upon-Trent, a notice in writing, signed by the secretary, stating their desire to terminate the contract, the same shall, on a day to be specified in such notice, being not earlier than one calendar month from the delivery or leaving thereof, cease and determine, and the contractor in that event to be entitled to reasonable compensation, not exceeding the sum of ten thousand pounds, to be agreed upon or settled by arbitration, in the manner herein-after prescribed for the settlement of all matters in dispute.

Contractor on termination of contract to deliver up rolling stock, &c. in good repair; or company may repair, and charge contractor with cost thereof.

3. Upon the expiration, or sooner determination by notice or otherwise, of the contract, the contractor shall deliver up to the company or to such person as they may, under the hand of the secretary, appoint to take charge of the same, all the sheds, cottages, and other buildings, the rolling stock, engines, tanks, water-cranes, tools, implements, plant, and machinery, and all other the property and effects of the company entrusted to the care or charge of the contractor under, or in pursuance, or in consequence of this contract, in good and substantial repair and in perfect and efficient working order and condition; and if the same shall not be in such repair, order, and condition in the judgment of the engineer, certified in writing, the company shall be at liberty to repair the same, and put them in such repair, order, and condition, according to the true intent and meaning of the contract, and charge and deduct the cost thereof from any monies which may be in their hands of, or which would be otherwise due and payable to, the contractor under this contract, or otherwise.

Contract not to interfere with traffic arrangements with other companies.

4. The contract to be subject to and not to preclude any arrangements which may become necessary or convenient by reason of any contract which the company may have entered into or may hereafter enter into with any other railway company for the passage over or along the railway of any engines, coaches, waggons, or other carriages of any other company, or for the passage over any other line of railway of any engines, coaches, waggons, or other carriages of the company.

Rolling stock to be entrusted to contractor.

5. The contractor to have the custody and, for the purposes of this contract, the use of all the rolling stock belonging to the company.

May be increased.

6. The company, on the request of the contractor and the certificate of their engineer as to its expediency, to increase from time to time their rolling stock.

Old may be sold and new purchased.

7. The company, on like request and certificate, to sell any portion of the rolling stock and purchase new stock in lieu thereof, to be denominated, for the purposes of the contract, substituted stock.

To be kept in good condition.

8. The contractor to keep the rolling stock in good and perfect condition and efficient working order to the satisfaction of the engineer, who shall be the sole judge thereof.

Provision for its depreciation.

9. The contractor, nevertheless, to be subject to a charge or deduction to be made quarterly for depreciation of the rolling stock at and after the following rate:—

Three halfpence per mile run for each locomotive engine, or ten shillings per diem when it shall have been used and no mileage account kept.

One-sixth of a penny per mile run for each first-class or composite carriage.

One-eighth of a penny per mile run for each second-class carriage.

One-tenth of a penny per mile run for each third-class carriage.

One-twelfth of a penny per mile run for each horse-box, luggage-van, waggon, or other vehicle.

Contractor to have use of stationary engines, &c. at 15l. per cent. on cost price for use; 10l. per cent. for depreciation.

10. The contractor to have the use, for the purposes of this contract, of the engines, tanks, water-cranes, tools, implements, plant, and machinery belonging to the company, and requisite for the purposes of this contract, and to pay for the use thereof at the rate of fifteen pounds per centum per annum; and for depreciation a further amount, at the rate of ten pounds per centum per annum on the cost price thereof, as shown by the company's books, and certified by their engineer.

Contractor to have use of the gas works at Stoke at 5l. per cent. on cost for use; 5l. per cent. for depreciation; and supply company with gas.

11. The contractor, for the purposes of this contract, to have the use of the works of the company at Stoke-upon-Trent, for the manufacture of gas, and to pay as rent for the use thereof at the rate of five pounds per centum per annum, and for depreciation a further amount at the rate of five pounds per centum per annum on the capital expended in their construction, as shown by the company's books, and certified by their engineer; and to supply the company with gas at their station and premises at Stoke-upon-Trent, in such manner as the engineer may from time to time direct, at the rate of three shillings and sixpence per one thousand cubic feet.

Contractor to have use of the sheds, &c. at 1l. per cent. on cost.

12. The contractor to have the use, for the purposes of this contract, of the sheds, and other buildings, as now erected by the company, for the housing or repairing of the rolling stock; and to pay for the use thereof at the rate of one pound per centum per annum on the capital expended in their construction, as shown by the company's books and certified by their engineer.

Contractor to have occupation of the labourers' cottages.

13. The contractor to have the use and occupation, for the purposes of this contract, of the twenty cottages erected by the company for their workmen at Stoke-upon-Trent, and to pay for the use thereof at the rate of two hundred and twenty pounds per annum.

Company to erect additional buildings if required.—Contractor to pay 6l. per cent. on their cost.

14. The company, on the request of the contractor and the certificate of their engineer as to their expediency, to erect additional buildings; and the contractor to pay for the use thereof at the rate of six pounds per centum per annum on the capital expended in their construction, as shown by the company's books and certified by their engineer.

Contractor to keep plant, &c. in repair.

15. The contractor to keep all the engines, water-cranes, tools, implements, plant, and machinery, in perfect condition and good working order, and maintain the gas-works, sheds, workshops, cottages, and other buildings in good and substantial repair, to the satisfaction of the company's engineer, who shall be the sole judge thereof.

The contractor to purchase stores.

16. The contractor to purchase all stores applicable to the purposes of this contract now belonging to the company, at their cost price, as shown in the company's books, and certified by their engineer.

Contractor to employ sufficient workmen, and do all needful acts.

17. The contractor at all times to keep employed and paid a sufficient number of competent foremen, mechanics, engine-drivers, firemen, cleaners, and other workmen and labourers, and also provide at his own cost all stores and implements, and do all other acts and things necessary

and convenient for the working of the traffic of the railway in the most efficient manner, and for the due performance of all the works, repairs, matters, and things to be done under and in pursuance of this contract.

Company may employ men, &c. to work line if contractor fail.

18. In the event of the contractor failing, in the opinion of the engineer, to be certified in writing, at any time, to keep employed a sufficient number of foreman, mechanics, engine-drivers, fireman, cleaners, and other workmen, or to provide proper stores, or implements, or to do any act or thing necessary or convenient for the working of the traffic, and due performance of all the works, repairs, matters, and things to be done and performed under and in pursuance of this contract, according to the true intent and meaning thereof, the company shall be at liberty immediately to employ and pay such and so many foremen, mechanics, engine-drivers, firemen, cleaners, or other workmen, and to provide proper stores, and implements, and to do any other act or deed necessary or convenient for the working of the traffic and due performance of all the works, repairs, matters, and things to be done and performed under and in pursuance of this contract, and to charge the contractor with all monies which they may pay in and about or in consequence of the same.

Contractor to have use of electric telegraph.

19. The company to transmit by the electric telegraph all messages directly connected with the working of the traffic under this contract free of expense from or to all stations where their instruments may be established, provided such trasmission shall not interfere with the ordinary business of the company.

Contractor to be liable for damage from defective stock or negligence and to penalties.

20. The contractor to be responsible for, and to pay to, and the company to be at liberty to deduct from any monies which may be due, or which would otherwise be or become due and payable to him, all damage, loss, compensation, costs, and expenses which may be occasioned, or which they may have paid, incurred, or suffered, or which they may have become liable to pay, incur, or suffer, by, or by reason of, or in consequence, whether directly or indirectly, of any defect or deficiency in the rolling stock, or of the engines, plant, machinery, or other effects entrusted to his care, or of the negligence or misconduct of the persons employed by him, except any damages' losses, compensation, costs, and expenses, by reason of loss of life of or personal injury to any passenger travelling on the railway, and to forfeit and pay in addition two shillings and sixpence for every train which shall arrive at its terminal station five minutes after the time specified for its arrival, and the further sum of one shilling for each minute which shall elapse after such five minutes and before its arrival, unless the engineer shall certify that the delay was occasioned by unavoidable accident or other reasonable excuse.

And to pay 50l. for delays in starting trains.

21. The contractor also to forfeit and pay a sum not exceeding fifty pounds, to be settled by the engineer, for each train which shall be prevented from, or delayed in, starting at the appointed time by the neglect or default of the contractor, or of any person employed by him.

Persons employed by contractor to observe rules of company.

22. All foremen, mechanics, engine-drivers, firemen, cleaners, and other persons employed by the contractor, to observe and be subject to the rules, regulations, and byelaws of the company for the time being in force, and to be liable to immediate suspension by the traffic manager or the engineer, and to immediate dismissal by an order of a board of directors.

Contractor to observe rules of company.

23. The contractor to observe all the said byelaws, rules, and regulations, and especially those having reference to the number of trains, the number and description of vehicles for each train, the stations at which the trains shall stop, their times of starting and arrival, and their rate of speed.

Notice of alteration in trains to be given to contractor.

24. The company to give to, or leave for the contractor at his office at Stoke-upon-Trent, two clear days' notice in writing of every alteration in the number of trains, their times of starting and arrival, and rate of speed; and two clear hours' notice of every special train.

Contractor to obey special directions of engineer or traffic manager.—If extra expenses incurred by him thereby to be compensated.

25. The contractor at all times to obey the special directions, whether verbal or written, of either the engineer or the traffic manager, touching the starting or non-starting of any train, the usage or non-usage of any engine or vehicle, the rate of speed of any train, either over the whole or any portion of the railway, the stopping or not stopping at any station, and generally touching any matter involving the working of the railway with greater safety and convenience, although such special directions may be contrary to the time-bills and the general instructions of the company, or to the rules and regulations for the time being in force; provided that if such special directions shall, in the opinion of the engineer, certified by him in writing, entail on the contractor any extra expense not fairly covered by the stipulated sums to be paid to him, he shall receive such sum in respect thereof as the engineer shall in writing certify to be reasonable.

Contractor to have office at Stoke.

26. The contractor to have during the continuance of the contract an office within the distance of a quarter of a mile from the booking office of the company at Stoke-upon-Trent, and to notify in writing its position and every change in its position to the secretary of the company.

Contractor to pay tolls, &c. for his stores.

27. The contractor to pay such rates and tolls for the conveyance of stores on the railway as would be payable to the company by any other party for the conveyance of the like articles in the waggons of the company.

Contractor to supply engines for ballasting, &c.

28. The contractor to supply, when and in manner required by the engineer, locomotive power for repairing the railway and for ballasting and maintaining the permanent way at per engine per day of eight hours.

And to have benefit and assume liabilities of existing contracts.

29. The contractor, for the purposes of this contract, to have the benefit and assume the liabilites of all subsisting contracts with the company in respect of supply of water and engine-sheds for the traffic on the railway, or in respect of any other matters connected with such traffic.

Remuneration in respect of locomotive power, &c.—Ordinary speed for mail or express trains 40 *miles per hour, and for stopping trains* 30 *miles.—Goods and minerals at* 18 *miles per hour, and also at* 12 *miles per hour.*

30. In consideration of the agreements on the part of the contractor the company to pay the several sums following; that is to say, for each passenger train propelled by locomotive power of the company consisting of eight vehicles, exclusive of engine and tender, and which shall not be timed at an average rate of running speed between station and station, including the starting from the one and the stopping at the other, if an express or mail train, of forty miles per hour, or if a third class or stopping train, of thirty miles per hour, for each mile so propelled the sum of , and for each vehicle in such train exceeding eight, an addition of one halfpenny per mile run and propelled by such power, and a reduction of one halfpenny per mile in like manner for each carriage less than eight in any such train; and for each goods, cattle, on mineral train propelled by locomotive power of the company of the gross weight, exclusive of engine and tender, of one hundred and twenty-five tons, whether conveyed in the vehicles of the company or otherwise, and which shall be timed at an average rate of running speed between station and station, including the starting from the one and the stopping at the other, of eighteen miles per hour, for each mile so propelled the sum of , and for each ton exceeding the said gross weight an addition of one-sixteenth of a penny per mile, with a reduction of the like amount for each ton less than the said gross weight; and for each such goods, cattle, or mineral train which shall be timed to an average rate of running speed between and station, including the starting from the one and the stopping at the other, of twelve miles per hour, for each mile so propelled the sum of , with a like addition or reduction of one-sixteenth of a penny per mile for every ton exceeding, or less than, the said gross weight.

Increased or diminished speed matter of arrangement.

31. The company to pay such an addition to or reduction from the preceding rates as shall be agreed on or settled by arbitration, for each train which may be timed at an average rate of running speed between station and station greater

or smaller than the average rate of running speed between station and station before specified.

Remuneration in respect of carriages.

32. The company to pay in addition the several sums following; that is to say, for or in respect of each vehicle of the company run in trains, whether on the line of the company or on the line of any other railway company,—

per mile run for each first-class carriage.
per mile run for each composite carriage.
per mile run for each second-class carriage.
per mile run for each third-class carriage, break, or luggage-van.
per mile run for each horse-box or carriage-van, truck, waggon, or other vehicle, when *loaded*.
per mile run for each horse-box or carriage-van, truck, waggon, or other vehicle, when *empty*.

If stock of greater value than its estimated depreciation, contractor to have difference.

33. The contractor shall be entitled at any time during the continuance of this contract, or at the termination thereof, to have valued all or any part of the rolling stock which, by the engineer, shall be certified to be in good and efficient order and working condition; and if the value of all such stock, with its debited depreciation, or if the part valued with its debited depreciation shall exceed the cost price respectively credited to the same, the difference shall be paid by the company to the contractor.

Accounts to be adjusted quarterly.—Principle of computation as to substituted stock.

34. The accounts between the company and the contractor shall be adjusted quarterly, and in such quarterly accounts provision shall be made for debiting or crediting, as the case may be, the contractor on each sale of rolling stock and purchase of substituted stock, upon the following principle:—

Each engine and vehicle of the rolling stock shall be credited with its cost price, and debited with its proper amount of depreciation according to the prescribed rate; and if the credited cost price of the stock sold shall exceed its debited depreciation and the net proceeds of its sale, the balance shall be carried to the debit of the contractor; if, on the other hand, the cost price shall be less than the depreciation and net proceeds, the balance shall be carried to his credit.

Company to retain one quarter's amount in hand.

35. The company to retain as part security for the due performance of the contract the first quarterly amount which shall be payable to the contractor, until the second quarterly amount shall have become payable, and then to retain the second quarterly amount until the third shall have become payable, and so throughout the duration of the contract, always retaining the last preceding quarterly amount which shall have become due and payable.

Security for due performance of contract.

36. The due performance of the contract in all respects according to the stipulations herein-before referred to shall be further secured by the joint and several bond or obligation of the contractor, and of [a] of [a], and of [a] of [a] as his sureties in the penal sum of twenty thousand pounds.

[a] Here insert names and residences and description of sureties at full length.

Arbitration clause.

37. In case any dispute or difference shall at any time hereafter arise between the contractor, his executors or administrators, and the company, touching or concerning any matters or things contained in this contract, or the true intent and meaning of all or any of the stipulations herein contained, and which are not referred to the determination of the engineer, and for the settlement of the several matters herein-before contained and mentioned to be settled by arbitration, the same shall be referred to arbitration, in manner prescribed by "The Companies Clauses Consolidation Act, 1845," in relation to the arbitration of matters or differences contemplated by such Act.

Dated this ninth day of June, in the year of our Lord One thousand eight hundred and forty-nine.

[a] Here to be signed by contractor or contractors. [a]

Accepted by the NORTH STAFFORDSHIRE RAILWAY COMPANY, who hereby covenant and agree with the above-named executors, and administrators, to observe, perform, fulfil, and keep all the foregoing stipulations and agreements, so far as, on their acceptance of the foregoing tender, they ought to be observed, performed, fulfilled, and kept by the said company. As witness their common seal hereto affixed.

APPENDIX CM.

FURTHER OBSERVATIONS by the WINGERWORTH COAL COMPANY in reply to Mr. ALLPORT'S additional Evidence.

Mr. Allport explains, in a note at page 5, that the difference of 1*s*. per ton in the rate for carriage of coals to Grantham from Swinton and Clay Cross in favour of the former point, though 24 miles further off than Clay Cross, arises from the Great Northern route being shorter. Now the distance from Swinton to Grantham by the Midland is 75 miles, and by the Great Northern 60 miles, while the distance from Clay Cross to Grantham by the Midland is only 51 miles. If the Great Northern rates to Grantham are so low as to prevent the Midland charging ordinary rates in all cases, it is most unreasonable that we should be shut out of that market by being required to pay 1*s*. per ton above the rate paid by more distant collieries.

With reference to the note at page 7, Mr. Allport admits that we are charged for signalmen and sidings put in at our own expense at Avenue Colliery, but he has not satisfactorily explained why we are debited with the whole of this claim, when the Midland Company have, since our siding was constructed, spent very large sums in making special sidings exclusively for other collieries, and have also provided signalmen without charge.

Referring to the observations at page 27, we repeat that the 16 waggons were delayed as mentioned in the list, and that these waggons were merely a few selected at random as instances of the loss we sustain by innumerable delays to the same or greater extent, rendering it necessary for us to expend at least one-fourth more capital in waggons than we otherwise should require. The Midland Company take the account of loaded waggons at Clay Cross, and also of the arrival and departure of waggons at Derby Wharf, so that it would have been easy for Mr. Allport to have referred to these books and shown that our statement was incorrect if it were so, as he at first so freely asserted.

Mr. Allport says we are allowed siding room at Derby for 10 waggons. This is the first time we have heard of being limited to this number. The written agreement for the siding does not name any limit, and moreover we have frequently had a larger number and no objection has been made thereto.

The coals for Derby Wharf were ordinarily sent in November and December last by only one train per day, and not six as named by Mr. Allport, and this train was generally so loaded when it reached Clay Cross as to be unable to take our coals, which were then delayed in the sidings at the company's pleasure. We are charged 1*s*. per day if we detain loaded waggons in the Derby Wharf, but nothing was paid or claimed in November or December, nor was any complaint made to us in those months of our occupying the sidings with too many loaded waggons, but on the contrary the wharf has been many times quite clear of trucks when we have had a supply of coals on the railway two or three days, and our agents have been unemployed until the coals were delivered in the proper sidings.

The coal trade at Derby as at all other places is necessarily fluctuating according to the demand, which is invariably greater in the winter months.

Our waggons are delivered to the company at the top of the incline, and are liable to several hours' delay before being run down. The working of this incline by the railway company, to whom it belongs, is, as before stated, very unsatisfactory to us, much time being lost and damage done to the stock by the inefficient system of getting waggons up and down.

The empty waggons are generally cleared out of the Derby Wharf every evening, but they are very often delayed in other sidings before reaching Clay Cross.

We have many times made complaints of delays to our waggons without obtaining a remedy, and even during the month of March last several of our trucks were two days and three days in going from Clay Cross to Derby.

Wingerworth Collieries,
April 28, 1866.

Appendix CN.

ENGLISH AND CONTINENTAL RAILWAYS.

Comparison of the Rates charged for Passengers, Goods, Passengers' Luggage; Speed of Trains; Number of Passengers carried; Receipts per Mile; Dividends, &c., &c.

(*Furnished by Mr. C. W. Eborall, and referred to by him in his Answer to Question* 16,150.)

Receipts.	Northern of France.			South-eastern Railway.		
Principle of Charge.*	In France, Belgium, and Germany:—Per Kilometre.			In England:—Per Mile.		
	Class.	Passengers.	Soldiers and Sailors.	Express Passengers.	Ordinary Passengers.	Soldiers and Sailors.
Rates for Passengers of each Class, per mile	1st	*d.* 1·72032	*d.* 0·43008	*d.* 2·75	*d.* 2·50	Officers, 2*d.*
	2nd	1·29024	0·32256	2·00	1·75	Soldiers, 1*d.*
	3rd	0·946176	0·236544	—	0·95	—
	Minimum Distance charged as 3¾ Miles.			Minimum Distance charged as 1 Mile.		
Exceptions for Short Distances	1st	*d.* 9·984		Say 1st	*d.* 3	
	2nd	7·68		„ 2nd	2	
	3rd	5·376		„ 3rd	1	
				For distances under 10 miles only ordinary fares charged.		
Return Tickets	Are not issued to and from all Stations; only from Paris, Lille, Amiens, St. Quentin, Arras, Valenciennes, and other large towns; but no return tickets for distances over 62½ miles. This principle applies generally to other railways in France.			Are issued to and from all stations, with some few exceptions.		
Excursion and Cheap Tickets	On fête days, 2nd and 3rd class only are issued. And in the *summer season* to the sea side			On special occasions return tickets are issued at a single fare for the double journey. During the summer months fixed and occasional excursion trains are run at rates less than the single fare for the double journey; for example, between London and Dover, 2nd class, 5*s.* 6*d.*; 3rd class, 3*s.* 6*d.*		
Return Ticket Fares *How calculated.*	1st	25 per cent.	Reduction on the double single fares.	A single fare and a half for the double journey, or a reduction of 25 per cent., with certain trifling exceptions.		
	2nd	25 „				
	3rd	15 „				
Return Tickets *Time available.*	For the same day on the *Nord* and *Ouest*. The ticket taken in the morning is only available for the last train that night. The *Lyons* and *Est* for 24 hours. The *Orleans* allow two days, say Saturday to Monday; and if the Monday happens to be a fête, the ticket is available for the Tuesday.			Under 40 miles for the same day; over 40 miles, two days; and all return tickets are available from Friday to Monday.		

* For the purposes of comparison, the French kilometres, kilogrammes, and francs are reduced to the English standard of miles, tons, and £ *s. d.*

Luggage.

In France 30 kilo. or 60 lbs. of Luggage are allowed free to each Passenger, and all above that weight is charged for; although the Rate per Mile for the conveyance of Passengers is less on the Continent than in England, when the charge for Luggage is taken into consideration, it will be found that the Traveller pays very nearly the same for similar distances in both Countries.

In Belgium and Germany all Luggage is charged for, none being allowed free.

The following are a few Examples for various Distances :—

	Charge for Distances under 40 Miles on South-eastern Railway, and for similar Distances in France and Belgium.			Charge for Distances over 40 Miles on South-eastern Railway, and for similar Distances in France and Belgium.

Appendix CO.

Statement from the Board of Trade on Railway Charges for Conveying Rockets for Saving Life from Shipwreck,

Board of Trade, Whitehall,
My Lord Duke, 11th May 1866.

I am directed by the Board of Trade to call the attention of your Grace and of the other members of the Commission now sitting to inquire into the charges on railways to the following statement on the subject of rates charged by railway companies for the conveyance of rockets and stores supplied by this Department for the use of the apparatus for saving life from shipwreck on the coasts of the United Kingdom.

On a recent occasion the Board of Trade sent a box of fuses, &c., weighing 16 lbs., of the estimated value of 15*s.*, from Woolwich to Banff, and the cost of conveyance by the Great Northern Railway was 20*l.* 4*s.*

On other occasions the sums of 19*l.* 9*s.* 11*d.* and 21*l.* 8*s.* 8*d.* have been paid for conveying rockets and property of small value from Camden to Aberdeen, and 3*l.* 15*s.* 4*d.* for the conveyance of a few rockets to Aldborough in Suffolk from Woolwich.

These charges are so large as seriously to interfere with the service, and it seems to deserve consideration whether some reduction should not be made, so as to secure the conveyance of these important stores in cases of emergency at a moderate rate.

A copy of a letter addressed to this Board by direction of the Under Secretary of State for War is enclosed.

I have, &c.
(Signed) T. H. Farrer.

His Grace the Duke of Devonshire, Chairman of the Royal Commission on Railways, House of Lords.

Sir, War Office, 2nd October 1865.

I am desired by Earl de Grey and Ripon to forward herewith a bill from the North of Scotland Railway, amounting to 20*l.* 4*s.* for the carriage of a box of long lights from Woolwich to the Portsoy station, Banff, Coast Guard Division.

As these stores were forwarded by rail in consequence of communications received from your Department *pressing* for their early supply, I am to request that the necessary instructions may be given for the payment of the amount in question.

Messrs. Pickford, the contract carriers for this Department, have been written to, and every effort will be made to arrange for a cheaper mode of conveyance in future. Owing, however, to the remote and isolated character of the stations to which these long lights are to be forwarded, great difficulty exists in forwarding these stores, and Earl de Grey and Ripon would be glad if the service could be undertaken by your Department.

I have, &c.
The Secretary, (Signed) J. Crawford Caffin.
Marine Department,
Board of Trade.

Forwarding Railway Advice Note.

Sir, Banff, 22nd September 1865.

I have to-day received the enclosed demand for 20*l.* 4*s.*, being railway charge for a powder van containing small box of portfires and long lights for this division. I beg to request that you take the necessary steps to have the bill settled with the company, so as to enable me to receive the box, as they refuse to give it up until the above charge is paid, which I am not authorized to do.

I have, &c.
(Signed) John Gell Cundy,
The Military Store Keeper, Inspecting Commander.
Military Store Office,
Woolwich.

Appendix CP.

Railway Clearing House.—January 1865.—General Classification of Goods by Merchandise Trains upon Railways.

All Goods (except Grain and Timber) to be charged at 2,240 lbs. to the ton.—(*Goods Man. Min., April* 1864.)

Each consignment to be separately charged in Invoices, but when several consignments of Station to Station traffic of less than *two tons* weight each, weigh collectively more than *two tons*, and are forwarded from one Station to any other Station in the same Train, by a consignor who pays the carriage, he will not be liable to be charged more than the Station to Station Rate for similar articles when carried in lots of *two tons* or upwards.

MINERAL CLASS.—[Station to Station only.]

Being loaded and unloaded by owners, conveyed at their risk, and carried in quantities of not less than four tons, otherwise chargeable at Special Class Rates, or as for four tons at Mineral Class Rate.

Bricks, common.
Chromate Ores.
Cinders.
Clay.
Compost.
Coprolites, for manure.
Draining Pipes and Tiles (common for agricultural draining).
Dross.
Fire Bricks and Clay.
Flagstones.
Granite, undressed.
Gravel.
Iron Ore.
Iron, Pig.
Ironstone.
Lime and Limestone.
Manure, in bulk.
Ores:—
Chromate.
Iron.
Sulphur.
Zinc..
Peat.
Pig Iron.
Potters' Earth.
Pyrites.
Salt, rock and unmanufactured.
Salt, in bulk, including manufactured Salt, when so carried. Not carried except in owner's waggons.
Sand.
Scoria.
Slag.
Slates, common.
Stone, in the rough state, building, pitching, paving, kerb, or flag. The weight of Stone is calculated at 20 cwt. of 112 lbs. to the ton.—Gen. Man. Min., May 1857.
Sulphur Ore.
Tiles, roofing and draining (common).
Turf.
Zinc Ore.

SPECIAL CLASS.—[Station to Station only.]

Carried in quantities of not less than two tons, otherwise chargeable at First Class Rates, or as for two tons at Special Class Rate.

The two tons minimum weight applies to all Goods (excluding Goods in the Mineral Class of the Classification) when carried at S. to S. Rates, less than First Class Rates, except when a higher minimum weight is specially fixed by the Companies interested in the Traffic.—(*Goods Man. Min., 24th April* 1862.)

Alabaster.
Alkali.
Alum and Alum Cake.
Anchors.
Armour Plates, Bessemer made, as undamageable iron.
Asphalte Apparatus, when sent with Asphalte.
Asphaltum.
Axles, Bessemer made.
Axles, Wheels, and Tyres, railway.
Axles, Wheels, and Tyres, steel, at owner's risk.
Baggage, Military, 2*d.* per ton per mile S. to S.

SPECIAL CLASS—*cont.*

Bark, packed.
Barley.
Bars, iron.
Bar Wood.
Barytes.
Baywood.
Beans.
Bessemer made Goods:—
Armour Plates, Ingots, Rails } as undamageable iron.
Axles.
Rough Forgings.
Shot.
Steel Points and Crossings.
Tyres.
Bleaching Powder.
Blocks, rough cast steel horn.
Boiler Plates, iron.
Bone Ash.
Bone and Horn Waste, in truck loads of not less than 3 tons.
Bones, common, for size or manure.
Bones, calcined.
Borings, iron.
Bran.
Brimstone.
Builders' Implements, such as Ladders, Planks, Scaffold Poles, &c.
No less charge than as for 1 ton per waggon.
Burr Stones.

Cabbages (see Vegetables).
Cannon Balls.
Carrots (see Vegetables).
Cement.
Cement Stone.
Chains, large, loose.
Chairs and Rails, iron.
Chalk.
Charcoal, packed.
Charcoal, Animal.
Charubs or Locusts, actual weight.
Chimney Pots, earthenware, at owner's risk.
China Clay.
Clay Retorts, at owner's risk.
Clog Blocks, rough.
Coal Dust, in bags and casks.
Coal Tar, and Creosote.
Not to be carried except in owner's trucks.
Cocoa Nut Refuse for Manure.
Copperas.
Copper Ore.
Cordwood, machine weight.
Corn.
Creosote and Coal Tar.
Not to be carried except in owner's trucks.
Crossings & Points, railway.
Crossings and Points, steel, railway.
Crossings and Points, steel, Bessemer made.
Cullet, in casks.
Not to be carried loose or in bags.

Dari.
Deals, 2½ tons per standard.
Dills.
Disinfecting Powder.
Draff, or Brewers' and Distillers' Grains.
Drain Pipes.
Dried Peas.
Dyewoods:—
Barwood.
Fustic.
Logwood, in logs.

Earth Nuts.
Emery Stone.

Farina
Felloes, Naves, and Spokes.
Fire-clay Ware:—
Chimney Cans, at owner's risk.
Vent Linings, at owner's risk.
Fire-clay Ware, not otherwise specified, at owner's risk.
Firewood, prepared, and Fire-lighters, in truck loads of 3 tons and upwards.
Flax Seed.
Flints.
Flint, ground, packed, not carried loose, in truck loads of not less than 3 tons.
Flooring Boards.
Flour.
Flour, Sago.
Forgings, rough, Bessemer made.
Founders' Dust, packed, not carried loose.
Fuel, patent.
Fullers' Earth.
Fustic.

Gas and Coal Tar.
Not to be carried except in owner's trucks.
Gas and Water Pipes, iron, except Water Pipes for spoutings and their connexions.
Gas Water.
Glue Pieces, wet.
Grain, Flour, &c.:—
Barley.
Beans.
Bran.
Dari.
Dills.
Flour.
Gurdgeons.
Hominy.
Indian Corn.
Malt.
Meal.
Millet.
Oats.
Peas.
Pollard.
Rye.
Sharps.
Shelling.
Tares.
Vetches.
Wheat.
Grains, Brewers' and Distillers'.
Grindstones, at owner's risk.
Guano and packed Manures.
Gurdgeons.
Gypsum.

Hominy.
Hoopwood, rough, in bundles.
Horn and Bone Waste, in truck loads of not less than 3 tons.
Horn Blocks, rough cast steel.

SPECIAL CLASS—*cont.*

Ice, in 4 ton lots and upwards.
N.B.—Weight in all cases to be taken at starting point.
Indian Corn.
Ingots, Bessemer made, as undamageable iron.
Iron:—
Boiler Plates, Bars, and other undamageable Iron.
Borings.
Forgings, in the rough, not otherwise provided for.
N.B.—Any single piece, weighing more than 6 tons, or from its shape requiring a specially constructed waggon for its conveyance, to be matter of special arrangement.
Gas and Water Pipes, except Water Pipes for spoutings and their connexions.
Rails and Chairs.
Retorts.
Scrap.
Spikes.
Tip, over ⅝ of an inch (as undamageable iron).

Lathwood.
Lead Ore.
Do. Pig.
Leather Shavings, for manure.
Linseed.
Locusts or Charubs (actual weight).
Logwood (in logs).

Mahogany.
Malt and Meal.
Malt Culms, to be charged actual weight.
Manganese.
Mangel Wurzel (see Vegetables).
Manures, packed.
Manures, Shoddy.
Millet.
Muriate of Potash.

Naves, Felloes, and Spokes.
Nitrate of Soda.

Oats.
Ochre.
Oil Cake.
Oil Cake, ground.
Onions (see Vegetables).

Ores:—
Copper.
Lead.

Paddy, or Rice, in the husk.
Patent Fuel.
Peas, dried.
Peas, green (see Vegetables).
Pelts, wet.
Pipe Clay.
Plaster.
Points and Crossings, railway.
Points and Crossings, steel, railway.
Pollard.
Posts and Rails, for fencing.
Postwood, machine weight.
Potash, Muriate of.
Potatoes (see Vegetables).
Powder, disinfecting.
Pozzolano.
Prepared Firewood and Fire-lighters, in truck loads of 3 tons and upwards.
Propwood, machine weight.

Rails, Bessemer made, as undamageable iron.
Rails and Posts, for fencing.
Railway:—
Iron Rails and Chairs.
Points and Crossings.
Points and Crossings, steel.
Points and Crossings, steel, Bessemer made.
Sleepers, machine weight.
Wheels, Axles, & Tyres.
Rape Seed.
Retorts, clay, at owner's risk.
Retorts, iron.
Rice in the husk, or Paddy.
Rice, Flour and Meal.
Ridges, at owner's risk.
Ropes, old, including Wire Ropes.
Rough Forgings, Bessemer made.
Rye.

Sago, Flour.
Salt, in bags.
Salt, manufactured.
Salt Cake.
Sanitary Tubes.
Sash Weights.
Satin White.
Sawdust.
Scrap Iron.
Seeds:—
Flax.
Linseed.
Rape.
Seeds, for crushing for oil.
Sharps.
Shelling.
Shoddy Manure.
Shot, cannon.
Sleepers, railway, machine weight.
Soda.
Soda Ash.
Soot.
Spelter.
Spetches, wet.
Spikes, iron.
Spokes, Felloes, and Naves.
Staves.
Steeel Plates, for shipbuilding.
Steel Points and Crossings, railway.
Steel Points and Crossings, Bessemer made.
Steel Wheels, Tyres and Axles, at owner's risk.
Steel Horn Blocks, rough cast.
Stones:—
Burr.
Emery.
Grindstones, at owner's risk.
Stone, roughly wrought up, as troughs, sinks, &c.
The weight of Stone is calculated at 20 cwt. of 112 lbs. to the ton.—Gen. Man. Min., May 1857.

Tares.
Tiles, roofing, ridge, paving, (quarries) at owner's risk.
Timber, round.
Timber, logs or baulks. For measurement.
Tubes, sanitary.
Turnips (see Vegetables).

SPECIAL CLASS—*cont.*

Tyres, Wheels, and Axles, railway.
Tyres, Wheels, and Axles, steel, at owner's risk.
Tyres, Bessemer made.

Umber.
Undamageable Iron (boiler, plates, bars, &c.)

Vegetables, in lots of 3 tons and above.
NOTE.—The term Vegetables includes Cabbages, Green Peas, New Potatoes, Water Cress, and all others, except the undermentioned :—
Carrots, Mangel Wurzel, Onions, Potatoes (Old), and Turnips, loose, in lots of 3 tons & above.
Do. in packages, in lots of 2 tons and above.
Vent Linings, at owner's risk.
Vetches.

Water Cress (see Vegetables).
Water and Gas Pipes, iron, except Water Pipes for spoutings and their connexions.
Wheat.
Wheels, Axles, and Tyres, railway.
Wheels, Tyres, and Axles, steel, at owner's risk.
Whiting.
WOODS :—
Bar Wood.
Baywood.
Cordwood (machine weight).
Firewood, prepared (in truck loads of 3 tons and upwards).
Hoopwood, rough, in bundles.
Logwood (in logs).
Lathwood.
Mahogany.
Post Wood, machine weight.
Propwood, machine weight.
Sleepers (Railway), machine weight.
Staves.

FIRST CLASS.

The rates for this Class include collection and delivery at the Stations only where the Companies have a staff for that service.

No rate including Cartage to be quoted by any Company for any article weighing more than THREE tons, without first ascertaining that the other Terminal Company is prepared to perform such Cartage.

N.B.—*It is not competent, without consent, for any Company to convert a Carted rate into a Station to Station rate, by deducting an amount for Cartage, but all Goods should be invoiced at the rates which have been agreed to.*—(Goods Man. Min., April 1863.)

Acetate of Lime, in casks.
Acetate of Soda.
Acetic Acid, in casks.
Ale and Porter, in casks.
Ammonia, in casks or iron drums.
Antimony Ore.
Anvils.
Apples.
Argols.
Arm and Share Moulds.
Ashes, pot and pearl.
Asphalte Apparatus, when not sent with Asphalte.

Bagging, Surat.
Barilla.
Barley, Pot.
Bars, Capstan.
Biscuit, Dog.
Blocks, Bobbin.
Blubber.
Bobbin Blocks.
Boilers under 30 feet long S. to S.
Boilers requiring more than one waggon, to be charged not less than as for 2 tons per waggon; to be loaded by sender, and unloaded by consignee, and carried at owner's risk.
Boilers of a peculiar shape, or extraordinary dimensions, requiring alterations to be made in waggons, to be carried only by special agreement.
Bolts, iron.
Bomb Shells (not loaded).
Bone and Horn Waste, if in less quantities than 3 tons, S. to S.
Bones, packed.
Bottles, Black and Green, or Common Glass.
Boxwood.
Bridge Work of iron plates, made up in parts not exceeding 30 feet, girders excepted.
Bridge Work of iron plates made up in parts above 30 feet (as girders).
Broom and Brush Blocks.
Buckets, iron.
Buffers, railway.
Buoys, iron.

Cabbages (see Vegetables).
Cam Wood.
Canada Plates.
Cannon.
Capstan Bars.
Carrots (see Vegetables).
*Castings, light or heavy, not otherwise enumerated, at owner's risk.
N.B.—Any single piece, weighing more than 6 tons, or from its shape requiring a specially constructed waggon for its conveyance, to be matter of special arrangement.
Cattle Food, prepared.
Cedar.
Chicory Root.
China Grass, in bales same as Esparto or Spanish Grass.
Cider, in casks.

* Castings, when carried at owner's risk and damaged in transit, to be returned free, if sent back within one month.

FIRST CLASS—*cont.*

Cisterns, iron.
Clay Retorts, if not declared at owner's risk.
Clog Soles, dressed.
Clothes' Pegs (packed).
Cobalt Ore.
Cocoa-nut Fibre, or Husk.
Cocoa-nut Matting.
Cocoa-nut Oil, in casks or iron drums.
Cod Oil, in casks or iron drums.
Corrugated Iron.
Cotton Seed Oil, in casks or iron drums.
Cotton Wool.
Crane Work of iron plates, made up in parts not exceeding 30 feet.
Crane Work of iron plates, made up in parts above 30 feet (as girders).
Crowbars.
Cutch.

Damageable Iron (hoop, sheet, &c.)
Divi Divi.
Doors, in cases.
DYEWOODS :—
Camwood.
Fustic, ground or chipped.
Lima Wood.
Logwood, ground or chipped.
Nicaragua Wood.
Sapan Wood.
Dyewoods, not elsewhere specified.
Dyewoods, ground.

Earthenware, loose at owner's risk, S. to S. Not to be carried at Company's risk. Minimum 1 ton.
Earthenware Bottles.
Ebony.
Engines, Fire, steam or otherwise (see Fire Engines).
Epsom Salts, in casks.
Esparto, or Spanish Grass, minimum 2 tons per waggon.

Farina, calcined.
Firewood, prepared, and Firelighters, in less quantities than 3 tons.
FISH :—
Thoroughly cured White Herrings, in brine.
Flint, ground, packed, not carried loose, under 3 tons.
Furniture Woods, not elsewhere specified.
Fustic, ground or chipped.

Galvanized Iron.
Galvanized Iron Wire.
Gambier.
Gasometer Sheets.
Girders, iron, not exceeding 15 feet in length.
Gooseberries, unripe.
GRAIN, FLOUR, &c. :—
Groats.
Pearl Barley.
Pot Barley.
Shudes.
Granite, polished and dressed, in blocks.
Grease.
Greaves.
Grindstones, if not declared at owner's risk.
Groats.
Gunny Bags, old.
Gun Stocks, rough.

Hammers, steam, consisting of heavy castings and forgings under 6 tons.
Hides, Kips, and Sheep Skins (foreign) salted or in bales.
Hoofs and Horns, Cow and Ox, packed.
Hoop, Sheet, or other damageable iron.
Hoops, Wood and Iron.
Horn and Bone Waste, if in less quantities than 3 tons, S. to S.
Horn Tips, packed.
Horse Shoes and Horse Shoe Bars.

Ice, packed.
Ink, in crates or casks.
IRON :—
Bolts.
Bridge Work of iron plates, made up in parts not exceeding 30 feet, girders excepted.
Bridge Work of iron plates, made up in parts above 30 feet (as girders).
Buoys, Buckets, and Cisterns.
Corrugated.
Crane Work of iron plates, made up in parts not exceeding 30 feet.
Crane Work of iron plates, made up in parts above 30 feet (as girders).
Galvanized.
Girders, not exceeding 15 feet in length.
Hoop, Sheet, or other damageable iron.
Horse Shoes and Horse Shoe Bars.
Masts, ships', iron or wood, S. to S. minimum charge as for 1 ton per waggon.
Muriate of, in casks.
Nails.
Nuts.
Rivets.
Rolls, cast or wrought in the rough, turned or unturned, at owner's risk, as damageable iron.
Rolls, cast or wrought, polished, packed, or in bags, at owner's risk.
Shoe Tips.
Spoutings and connexions, at owner's risk.
Staples.
Studs.
Tubing.
Turntables, in parts.
Washers.
Weights, for weighing.
Wire, not damageable.
Wire, galvanized.

Jute.

Keys, Railway, wooden.
Kips, Hides, and Sheep Skins (foreign), salted or in bales.

FIRST CLASS—*cont.*

Lancewood Spars.
Lard Oil, in casks or iron drums.
Laths, in bundles.
Lead Ashes, in bags.
Lead, sheet and piping.
Lead, red and white.
Lignum Vitæ.
Lima Wood.
Lime Salt.
Linseed Meal.
Linseed Oil, in casks or iron drums.
Litharge.
Logwood, ground or chipped.

Mangel Wurzel (see Vegetables).
Maple.
Marble, in blocks.
Masts, ships', iron or wood, S. to S. minimum charge as for 1 ton per waggon.
Metal, sheathing, new or old.
Millboards.
Molasses.
Muriate of Iron, in casks.
Mustard Seed, for grinding.
Myrobalons.

Nails, Iron.
Nicaragua Wood.
Nickel Ore.
Nitrate of Lead.
Nuts, Iron.

OILS, in casks or iron drums:—
- Cocoa Nut.
- Cod.
- Cotton Seed.
- Lard.
- Linseed.
- Palm.
- Pine.
- Rape Seed.
- Seal.
- Train.
- Whale.

Onions (see Vegetables).
Onions, in brine in ton lots.
Ores, Cobalt.
Ores, Nickel.
Osiers and Twigs, green and wet.
Oxide of Zinc, or Zinc White.

Palm Oil, in casks or iron drums.
Paper, coarse, intended for wrapping goods or printing newspapers.
Paper, waste.
Paraffin (wax).
Pasteboard.
Pearl Barley.
Pears, common.
Peas, green (see Vegetables).
Pegs, clothes, packed.
Perry, in casks.
Pine Oil, in casks or iron drums.
Pipes, rain water, for spoutings and their connexions at owner's risk.
Pitch.
Porter and Ale, in casks.
Potatoes (see Vegetables).
Pot Barley.
Prepared Cattle Food.
Prepared Firewood and Firelighters, in less quantities than 3 tons.
Pumicestone.
Putty.

Quercitron Bark.

Rags.
RAILWAY:—
- Buffers.
- Keys, wooden.
- Springs.
- Turntables, in parts.

Rain Water Pipes for spoutings and their connexions, at owner's risk.
Rape Seed Oil, in casks or iron drums.
Retorts, Clay, if not declared at owner's risk.
Rice.
Rivets.
Rolls, iron, cast or wrought in the rough, turned or unturned, at owner's risk. as damageable iron.
Rolls, iron, cast or wrought, polished, packed, or in bags, at owner's risk.
Rosewood.
Rosin.
Rottenstone.

Saltpetre.
Sapan Wood.
Satin Wood.
Scrap Steel.
Seal Oil, in casks or iron drums.
Seal Skins, wet and salted.
Seeds, Mustard, for grinding.
Sheathing.
Sheathing Metal, new and old.
Sheep Skins, in casks.
Sheep Skins, Hides, and Kips (foreign), salted or in bales.
Sheep Wash, in casks.
Sheet, Hoop, or other damageable iron.
Shells, Bomb (not loaded).
Shoe Tips, iron.
Shovel Moulds.
Shudes.
Shumac.
Silicate of Soda.
Size, in casks.
Skins, in casks.
Skins, Seal, wet and salted.
Skins, Sheep (see Sheep Skins).
Slate Slabs, in cases.
Slate Slabs, not in cases, at owner's risk.
Snakewood.
Soap.
Spade Trees.
Spanish Grass, or Esparto, minimum, 2 tons per waggon.
Split Peas.
Springs, railway.
Stannite of Soda.
Staples, iron.
Steam Hammers, consisting of heavy castings and forgings, under
Stearine.
Steel, blistered.
Steel, scrap.
STONES:—
- Grindstones, if not declared at owner's risk.
- Rottenstone.

Stone, carved for building purposes, at owner's risk.
The weight of Stone is calculated at 20 cwt. of 112 lbs. to the ton.—Gen Man. Min., 7th May 1857.
Studs, iron.

FIRST CLASS—*cont.*

Sugar (raw and refined) in casks and bags.
Sulphate of Alumina.
Sulphate of Copper.
Sulphate of Soda.
Sulphate of Zinc.
Surat Bagging.
Syrup.

Tallow
Tar.
Terra Japonica.
Tiles, ornamental, encaustic, and tesselated.
Tiles, roofing, ridge, paving, (quarries), if not declared at owner's risk.
Tin, in blocks, ingots, and boxes.
Train Oil, in casks or iron drums.
Treacle.
Tubing, iron.
Tulip Wood.
Turnips (see Vegetables).
Turntables, in parts.
Twigs and Osiers, green and wet.

Valonia.
Vegetables, in lots of 1 ton and under 3 tons. Lots under 2 tons not to be carried loose.
NOTE.—The term Vegetables includes Cabbages, Green Peas, New Potatoes, Water Cress, and all others, except the undermentioned:—
Carrots, Mangel Wurzel, Onions, Potatoes (Old), and Turnips loose, in less quantities than 3 tons.
Do. in packages, in less quantities than 2 tons. Lots under 2 tons not to be carried loose.
Verjuice, in casks.
Vinegar, in casks.
Vitriol Stone.

Walnut Wood.
Wash, Sheep, in casks.
Washers, iron.
Washing Powder and Paste.
Waste Paper.
Water Cress (see Vegetables).
Water Pipes, rain, for spoutings and their connexions, at owner's risk.
Weights, iron, for weighing.
Whale Oil, in casks or iron drums.
Wire, iron, galvanized.
Wire, iron, not damageable.
Woad.
Wood, Acid, in casks.
WOODS:—
- Boxwood.
- Camwood.
- Cedar.
- Ebony.
- Firewood, prepared, in less quantities than 3 tons.
- Furniture Woods not elsewhere specified:—
  - Lignum Vitæ.
  - Lima Wood.
  - Maple.
  - Nicaragua.
  - Rosewood.
  - Sapan Wood.
  - Satin Wood.
  - Snake Wood.
  - Tulip Wood.
  - Walnut Wood.
  - Zebra Wood.
- Wooden Railway Keys.

Zebra Wood.
Zinc, ingots, &c.
Zinc-white, or Oxide of Zinc.

SECOND CLASS.

The rates for this Class include collection and delivery at the Stations only where the Companies have a staff for that service.

No rate including Cartage to be quoted by the Company for any article weighing more than THREE tons, without first ascertaining that the other Terminal Company is prepared to perform such Cartage.

N.B.—*It is not competent, without consent, for any Company to convert a Carted rate into a Station to Station Rate by deducting an amount for Cartage, but all goods should be invoiced at the Rates which have been agreed to.*—(Goods Man. Min., April 1863.)

Agricultural Machines and Implements, in cases, at owner's risk.
Agricultural Seeds.
Air Stoves.
Albumen.
Ale and Porter, bottled, in cases, casks, or hampers.
Alkanet Root.
Alizaine.
Aloes, in casks.
Alva Marina, or Dry Sea Weed, for upholsterers' purposes.
Annatto.
Archil.
Arrow Root.
Arsenic.

Bacon and Hams, packed.
Bagging.
Baking Powder.
Bark, Tanners', loose.
Bass Mats.
Bedsteads, common wood.
Bedsteads, Iron, in cases or bundles.
Bedsteads when carried along with other furniture, to be charged as furniture.
Beef, in casks.
Berries, Yellow.
Besoms, Birch.
Bichrome.
Biscuit.
Blacking.
Black Lead.
Bladders, in casks.
Boilers, weighing less than a ton, occupying only one waggon.
Boilers, 30 feet and under 45 feet S. to S.
Boilers requiring more than one waggon, to be charged not less than as for 2 tons per waggon; to be loaded by sender, and unloaded

SECOND CLASS—*cont.*

Boilers—*cont.*
by consignee, and carried at owner's risk. Boilers of a peculiar shape, or extraordinary dimensions, requiring alterations to be made in waggons, to be carried only by special agreement.
Bone flats.
Bones, loose, other than for size or manure.
Boracid Acid.
Borax.
Brass.
Brass, scrap.
Brass wire.
Bread.
Bricks, Bath or Flanders.
Broom and Mop Handles.
Buckles, iron or brass.
Bump.
Butter, in casks and boxes.

Cabbages (see Vegetables).
Camata.
Camatina.
Canary Seed.
Candles, except wax.
Candlewick.
Canvas.
Cardamoms, in casks.
Carpeting.
Carraway Seed.
Carriage and Cart Springs, Axles and Steps.
Catsup, in casks.
Carrots (see Vegetables).
Chain Harrows.
Chains and Traces, in casks.
Chains, small, not exceeding 5-8ths of an inch, loose.
Cheese, packed.
Chicory, prepared.
Chimney Pots (earthenware), if not declared at owner's risk.
*China, in casks or crates.
Chocolate.
Cider, bottled, in cases, casks, or hampers.
Clod Crushers.
Clover Seed.
Cockles (see Fish).
Cocoa.
Cocoa Nuts.
Codilla.
Coffee.
Coir Yarn.
Colours and Paints, in casks.
Confectionery, in hogsheads.
Copper.
Copper Coin.
Copper, Scrap.
Cordage.
Coriander Seed.
Cotton Twist.
Cotton Waste.
Cotton and Linen Yarn, packed.
Cranberries.
Crane Work of wood and damageable iron made up in parts.
Crematine.
Crucibles, at owner's risk.
Cudbear.
Currants, grocers'.
Dates.
Disinfecting Fluid, in casks or tins.
Drugs, in casks or bales.
Drysalteries, not elsewhere specified, in casks.
Dyes, liquid, in casks.

Earthenware, in casks and crates.
Edge Tools.
Eggs, in crates and boxes.
Emery.
Emery Paper.
Empties.
Engines, Steam (Portable), weighing 3 tons and upwards.

Felspar.
Felt.
Field Seeds.
Figs.
Files.
Filters, Stoneware.
FIRE-CLAY WARE:—
Chimney Cans, if not declared at owner's risk.
Vent Linings, if not declared at owner's risk.
Fire-clay Ware not otherwise specified, if not declared at owner's risk.
Fire Engines, steam or otherwise, 3 tons and above.
FISH:—
Thoroughly cured Red Herrings.
Fish, thoroughly salted or dried, not otherwise named.
Shell Fish, &c.:— (At owner's risk.)
Cockles.
Limpets.
Mussels.
Periwinkles.
Whelks.
Fishing and Garden Netting, in bales.
Flax.
Flax Straw, at owner's risk, S. to S., with a minimum charge per waggon of 30 cwt.
Flax Waste.
Flocks.
Flour of Sulphur (as Drugs).
Fluid (disinfecting), in casks or tins.
Forges, portable.
Frying Pans.

Garancine.
Garden and Fishing Netting, in bales.
Ginger.
Ginger Beer.
Glass Beads, in casks or cases.
*Glass, crown, in boxes and crates. (At sender's risk.)
*Glass, flint.
*Glass, window, and rough plate.
Glue.
Glue Pieces, dry.
Goats' Hair.
Granilla.
Granite, polished and dressed, in cases.
Grapes, Foreign, as imported, packed in sawdust in cases or casks, at owner's risk.
Gums of all sorts.
Gun Barrels, rough.
Gutta Percha, unmanufactured.

Hair, plasterers'.
Hammer Heads.

SECOND CLASS—*cont.*

Hammer Shafts.
Hams and Bacon, packed.
Hardware.
Harrows, Chain.
Hay, hydraulic pressed, S. to S.
Hay, at owner's risk, S. to S. With no less charge than as for 1½ tons per waggon.
Hearth Rugs.
Hemp.
Hemp Seed.
Hemp Warps, packed.
Hemp Yarn.
Herrings (see Fish).
Hides, Kips, and Sheep Skins, green or market, at owner's risk.
Hinges, iron.
Hoes.
Hogsheads, not returned Empties.
Holloware, iron, in hogsheads.
Hoofs and Horns, Cow and Ox, loose.
Horn Tips, loose.
Hurdles, iron or wood.

Ice, loose.
India Rubber.
IRON:—
Bedsteads, in cases or bundles.
And when carried along with other Furniture, to be charged as Furniture.
Buckles.
Carriage and Cart Springs, Axles, and Steps.
Crane Work of wood and damageable iron made up in parts.
Hinges.
Holloware, in hogsheads.
Liquor.
Palisades.
Safes.
Screws.
Spades and Shovels.
Spoons.
Wire, bright.
Ivory Black.

Japan and Tin Ware, in casks or cases.

Kelp.
Ketchup, in casks.
Kips, Hides, and Sheep Skins, green or market, at owner's risk.

Lac, of all sorts.
Lard, in casks, boxes, and tins.
Lasts, packed.
Leather, undressed.
Lemonade.
Lemons.
Lemon Juice.
Lemon Peel, in casks.
Limpets (see Fish).
Linen and Cotton Yarn, packed.
Liquor, Iron.
Locks.
Locomotive Tubes.

Machinery, heavy.
Machines, printing, at owner's risk.
*Machines, Weighing, small, at owner's risk.
†Machines, Weighing, large.
Madders.
Malt Crushers.
Marble, in cases.
Marble, sawn into Slabs, but cemented together.
Mastic.
Matches, wood splints for, packed.
Matchetts.
Mats and Matting, except Cocoa Nut Matting.
Methylated Spirits (as Naphtha).
Mexican Fibre.
Millstones.
Mineral Water, in casks.
Mohair.
Mop and Broom Handles.
Moss, in bales.
Mungo.
Munjeet.
Mussels (see Fish).

Naphtha, in casks or iron drums.
Netting, Fishing and Garden, in bales.
Nickel.
Nuts.

Oakum.
Oils, in casks or iron drums, except those 1st and 3rd Class.
Old Clothes.
Onions, in brine, in lots of less than 1 ton.
Oranges.
Orchilla Weed.
Osiers and Twigs, brown.
Osnaburgs.
Oxalic Acid.

Paints and Colours, in casks.
Palisades, iron.
Palm Leaves.
Paper Hangings.
Pearl Shells.
Peas, green (see Vegetables).
Pegs, Shoe.
Pelts, dry.
Pencils, Slate.
Periwinkles (see Fish).
Perry, bottled, in cases, casks, or hampers.
Piassava.
Picker Bends.
Pins, metal, in boxes.
Pipes, Empty, not returned Empties.
Pork, in casks.
Portable Forges.
Porter and Ale, bottled, in cases, casks, or hampers.
Posts, signal, and materials belonging thereto, not less than 1 ton per waggon.
Potatoes, preserved.
Potatoes, new and old (see Vegetables).
Powder Blue.
Printing Machines, at owner's risk.
Provisions, salt.
Prunes.
Prussiate of Potash.
Puncheons, new, empty.

Quicks, Shrubs, and Trees.

Rabbit Skins, undressed.
Raisins.

* Included in the Carriers' Act.

* Those used for weighing Packages or Goods.
† Those used for weighing Railway or other Vehicles, and also Cattle.

SECOND CLASS—*cont.*

Ridges, if not declared at owner's risk.
Ropes, new, including Wire Ropes.

Sad Irons.
Safes, iron.
Safety Boxes.
Safflower.
Sago.
Salammoniac.
Sand Paper.
Sarsaparilla.
Sassafras.
Saws.
Scrap, brass.
Scrap, copper.
Scrap, tin.
Screw Jacks.
Screws, iron.
Screws.
Scythe Stones, loose, at owner's risk.
Scythe Stones, packed.
Seaweed (dry), or Alva Marina, for Upholsterers' purposes.
SEEDS :—
Agricultural.
Canary.
Carraway.
Clover.
Coriander.
Field.
Hemp.
Shafts, Hammer.
Sheep's Guts, in casks.
Sheepskins, Kips, and Hides, green or market, at owner's risk.
Shell Lac.
Shells, Pearl.
Shoddy.
Shoe Pegs.
Shot, small, in bags.
Shovels.
Shrubs, Quicks, and Trees.
Signal Posts and materials belonging thereto. Not less than 1 ton per waggon.
*Silk Waste, undressed.
Sink Traps.
Sizing.
Skins, Rabbit, undressed.
Slates, writing.
Slate Pencils.
Smalts.
Soda Water.
Soldiers' Clothing.
Spades and Shovels, iron.
Spetches, dry.
Sprit of Tar, in casks or iron drums.
Spirits, Methylated (as Naphtha).
Splints, wood, for Matches, packed.
Spoons, iron.
Starch.
Steam Engines, portable, (see Engines, Steam).
Steam Ploughs.
When Steam Ploughs and the Machinery belonging thereto, weighing in the whole over 3 tons are sent, the whole weight must be charged at 2nd Class rate.
Steel, bars and bundles.
Stone Blue.
STONES :—
Millstones.
Scythe, loose, at owner's risk.
STONES—*cont.*
Scythe, packed.
Whetstones.
Stone carved for building purposes, if not declared at owner's risk.
The weight of Stone is calculated at 20 cwt. of 112 lbs. to the ton. —(Gen. Man. Min., 7th May 1857.)
Stoneware Filters.
Sugar (lump), loose.
Sugar of Lead.
Sugar Mills.
Sugar Moulds and Pans.
Sulphur, Flour of (as Drugs).

Tar, Spirits of, in casks or iron drums.
Tarpaulings,
Tartaric Acid.
Terra-cotta Casts.
Tincal.
Tinfoil.
Tin, Scrap.
Tin Ware, in casks or cases.
Tobacco, leaf.
Tow.
Traps, Sink.
Trees, Quicks, and Shrubs.
Treenails.
Turmeric.
Turpentine, in casks.
Twigs and Osiers, brown.
Twine.
Twist, cotton.
Type, old.

Umbrella Stretchers.

Varnish, in casks or iron drums.
Vegetables, in lots above 3 cwt. and under 20 cwt. Lots under 2 tons not to be carried loose. But no quantity of Vegetables weighing more than 3 cwt. be charged less than as for 3 cwt.—(Goods Man. Min., July 1862.)
NOTE. — The term Vegetables includes Cabbages, Green Peas, New Potatoes, Water Cress, and all others, except the under-mentioned :— Carrots, Mangel Wurzel, Onions, Potatoes (old), and Turnips.
Vegetable Ivory.
Vegetable Wax.
Vent Linings, if not declared at owner's risk.
Verdigris.
Vices.

Warps, Hemp, packed.
Washers.
Waste, cotton and woollen.
Waste, Flax.
*Waste, silk, undressed.
Water Cress (see Vegetables).
Weft, cotton.
†Weighing Machines, small, at owner's risk.
‡Weighing Machines, large.
Whelks (see Fish).
Whetstones.
Window Sashes and Mouldings, at owner's risk.
Wire, bright.
Wood Splints, for Matches, packed.
Wool.
YARN :—
Coir.
Hemp.
YARN—*cont.*
Linen and Cotton, packed.
Yeast, in casks, ton lots.
Yellow Berries.
Zinc, sheets, &c.

* Included in the Carriers' Act.
† Those used for weighing Packages or Goods.
‡ Those used for weighing Railway or other Vehicles, and also Cattle.

SECOND CLASS—*cont.*

Bags, carpet.
Bales, Boxes, Cases, Packs, and Trusses of Manchester and Barnsley Manufactures, Scotch Cotton Goods, and Irish Linens.
Bark, Peruvian.
Bees' Wax.
Bellows.
Bells of all kinds.
Black Beer.
Blankets.
Blocks, Ships'.
Blowing Engines.
Boats or Cobles. Minimum charge, 1 ton per waggon.
Bobbins.
Boilers, 45 feet and above, S. to S.
Boilers requiring more than one waggon, to be charged not less than as for 2 tons per waggon ; to be loaded by sender, and unloaded by consignee, and carried at owner's risk. Boilers of a peculiar shape, or extraordinary dimensions, requiring alterations to be made in waggons, to be carried only by special agreement.
Boilers, copper.
Books.
Boots and Shoes (including Goloshes), in casks, cases, and boxes.
Bridge Work of iron plates, made up in parts above 30 feet (as girders).
Bristles.
British Wines, in casks or hampers.
Brooms, Broomheads, and Brushes.
Buckets and Pails.
Buckram.
Butter, in cools and tubs.
Buttons.

Calicoes.
Canada Stoves.
Candied Peel.
Candy Sugar.
Canes and Rattans, packed.
Cardamoms, in boxes or hampers.
Cards and Tickets, Railway.
Carpet Bags.
Carriage and Coach Wheels, at owner's risk.
Cases, Bales, Boxes, Packs, and Trusses of Manchester and Barnsley Manufactures, Scotch Cotton Goods, and Irish Linens.
Cassia Lignea.
*Castings, light or heavy, not otherwise enumerated, at Company's risk.
N.B.–Any single piece weighing more than 6 tons, or from its shape requiring a specially constructed waggon for its conveyance, to be matter of special arrangement.
Castor Oil, in boxes, casks, or iron drums.
Cast Iron Pots, loose.
Cheese, loose.
†Clocks, American and Dutch.
Clogs, in casks, cases, and boxes.
Coach and Carriage Wheels, at owner's risk.
Cobles or Boats. Minimum charge 1 ton per waggon.
Cockles (see Fish).
Colours and Paints, in hampers or boxes.
Combs.
Confectionery, in boxes or cases.
Conservatories and Hothouses, in parts at owner's risk. Minimum charge as for 1 ton per truck.
Copper Boilers.
Copper Rollers.
Cordials and Sweets, in casks and hampers.

* Castings, when carried at owner's risk, and damaged in transit, to be returned free, if sent back within one month.
† Included in the Carrier's Act.

THIRD CLASS—*cont.*

Cork Wood.
Cotton and Linen Thread.
Cotton and Linen Yarn, loose.
Cotton Slops, in bales.
Cotton Stays, in cases.
Cotton Warps, in bundles.
Cowries.
Crane Work of iron plates, made up in parts above 30 feet (as girders).
Crinoline Steel.
Crucibles.
Cutlery.

Drugs, in boxes or hampers.
Drysalteries, not elsewhere specified, in boxes or hampers.

Engines, Fire (see Fire Engines).
Engines, Steam (Portable), weighing less than 3 tons.

Fencing, iron wire.
Fenders, at sender's risk.
Fire Engines, steam or otherwise, under 3 tons. Minimum weight 1 ton.
Fire Escapes. Minimum of 1 ton per waggon.
Fire Irons.
Fish :—
Herrings and Sprats, in any state not otherwise named, including Bloaters and Kippered Herrings.
Kippered Salmon.

Watch Glasses.
Water Cress (see Vegetables).
Water and Gas Meters.
Water Pipes, rain, for spoutings and their connexions, if not declared at owner's risk.
Whalebone.
Wheels, coach and carriage at owner's risk.
Whelks (see Fish).
White Herrings (see Fish).
Window Frames, cast iron.
Wines and Spirits, in casks and cases.
Wines, British, in casks and and hampers.
WOOD :—
Cork Wood.

Yarn, cotton and linen, loose.
Yarn, woollen and worsted.
Yarn, when packed in cans.

FOURTH CLASS.

The rates for this Class include collection and delivery at the Stations only where the Companies have a staff for that service.

No rate including Cartage to be quoted by any Company for any article weighing more than THREE tons, without first ascertaining that the other Terminal Company is prepared to perform such cartage.

N.B.—*It is not competent, without consent, for any Company to convert a Carted Rate into a Station to Station Rate, by deducting an amount for Cartage, but all Goods should be invoiced at the rates which have been agreed to.*—(Goods Man. Min., April 1863.)

Acetic Acid, in carboys.
Agricultural Machines and Implements, except Clod Crushers and Steam Ploughs, if not declared at owner's risk.
When Agricultural Machines or Implements are carried under special arrangements, to or from Shows, they must be invoiced S. to S.
Agricultural Stock and Implements to and from the Royal Agricultural Society's Shows. See Regulations.
Alabaster Ornaments and Figures, packed, at owner's risk.
Almonds, not in shell.
Anchovies.

Balloons, at owner's risk.
Barèges.
Baskets.
Bent Wood and Gig Shafts.
Berries, Juniper.
Bonnet Fronts, at owner's risk.
Book Muslin.
Boothing or Stalling.
Boots and Shoes (including Goloshes), in hampers.
Bottles, Glass, white.
Bradford Stuff Goods.
Brass and Copper Tubing, except locomotive tubes.
Brass Pipes.
Britannia Metal Goods.
Bronze Powder.
Bulbous Flower Roots.
Bungs and Corks.
Busks, Wooden.
Butter, in crocks.

Calenders.
Candles, wax.
Canes and Rattans, loose.
Carboys, New, empty, Glass.
Cards for Carding Machines, carried in boxes only.
Carriage Bodies, unfinished. No less charge than as for 5 cwt.
Carriages, Railway, new, in cases.
Ditto, on their own wheels, 6*d.* per carriage per mile. Minimum charge 20*s.*
Carriage and Coach Wheels, at company's risk.
Carrots (see Vegetables).
Carts and Waggons (as Agricultural Implements).
Catsup, in bottles.
Cheese Presses.
Chimney Tops, Zinc.
Churns.
Clogs, in hampers.
Cloth Caps.
Coach and Carriage Wheels.
Coach and Upholsterers' Trimmings.
Cobalt.
Cochineal.
Coffins, metallic.
Conservatories and Hothouses, in parts, minimum charge as for 1 ton per truck.
Copper and Brass Tubing, except locomotive tubes.
Copper Pipes.
Copying Presses.
Corks and Bungs.

Drapery.
Dyes, liquid, in hampers or boxes.

FOURTH CLASS—*cont.*

Fenders, if not declared at sender's risk.
Figures and Ornaments, Alabaster, packed, at owner's risk.
Figures, Stucco, packed, at
Fire-clay Ware :—
Vases and other Ornamental Productions.
FISH :—
Salmon, in boxes.
Shell Fish :—
Prawns and Shrimps.
Floor Cloth, exceeding 10 feet long, not carried uncased.

Garden Plants, in baskets, mats, or pots.
Garden Seats.
Garden Seeds.
German Yeast.
Gig Shafts and Bent Wood.
Gilt Mouldings, in cases.
Ginger, preserved.
*Glass, Crown and Window.
Goods, light, not specified.
Granite, polished and dressed, in slabs.
Grapes.
†Grates, polished, if not declared at owner's risk.
Gravestones.

Handmills.
Hay, if not declared at owner's risk S. to S. With no less charge than as for 1½ tons per waggon.
Hay Rakes and Forks, in bundles.
Hothouses and Conservatories, in parts. Minimum charge as for 1 ton per truck.
Household Linen and Wearing Apparel.

Indigo, Extract of.
Ink, in jars or bottles loose.
Isinglass.

Juniper Berries.

Ketchup, in bottles.

Lamps.
Lard, in crocks.
Light Goods, not specified.
Linen (household) and Wearing Apparel.
Lint.
Lithographic Stones, at company's risk.
Looms, if not declared at owner's risk.
Luggage, trunks, &c.

Maccaroni.
Machinery, light.
Machines, Printing, if not declared at owner's risk.
Mangles, Washing and Wringing Machines, if not declared at owner's risk.
Marble, in slabs.
Meats, fresh.
Merinoes.
Methylated Spirits (as Naphtha).
Mistletoe.

Naphtha, in tins.
Needles, in boxes.
Nutmegs.

Oils, in cans, jars, and boxes, except Castor Oil.
‡Organs and Organ Work, packed in cases.
Ornaments and Figures, Alabaster, packed, at owner's risk.

Panoramas and Theatrical Scenery, at owner's risk, not in cases.
Paper Trays.
Patterns, Travellers'.
Picture Frames.
Pipes, brass.
Pipes, copper.
Pipes, smoking.
*Plated Goods.
Poppyheads.
Poultry, dead.
Prawns (see Fish).
Printing Machines, if not declared at owner's risk.

Quicksilver.
Quills.

Rabbits.
Railway Carriages, new, in cases.
Railway Carriages, new, on their own wheels, 6*d.* per carriage per mile, with a minimum charge of 20*s.*
Rattans and Canes, loose.
Reeds and Rushes, loose.

Salmon (see Fish).
Seeds, Garden.
Shafts, Gig.
Shrimps (see Fish).
Shoes and Boots (including Goloshes), in hampers.
Shovels and Spades, wooden.
*Silk Waste, dressed or spun.
Spindles.
Spirit of Tar, in tins.
Spirits of Wine (as Wines and Spirits).
Spirits, Methylated, as Naphtha.
Sponge, in Bales.
Stalling or Boothing.
Sticks.
STONES :—
Grave.
Lithographic, at company's risk.
Tomb.
The weight of Stone is calculated at 20 cwt. of 112 lbs. to the ton. — Gen. Man. Min., May 1857.
§Stoves and Grates, polished, if not declared at owner's risk.
Straw, S. to S. minimum charge per waggon of 20 cwt.
Straw Plait.
Stucco Figures, packed, at owner's risk.

Tamarinds.
Tar, Spirit of, in tins.
Tarlatans.

* Included in the Carriers' Act.
† Grates, when carried at owner's risk and damaged in transit, to be returned free, if sent back within one month.
‡ Pianos, Organs, and similar musical instruments to be charged as Furniture, when carried with Furniture.
§ Stoves, when carried at owner's risk and damaged in transit, to be returned free if sent back within one month.

FOURTH CLASS—*cont.*

Teazles, imported, packed.
Theatrical Scenery, at owner's risk, not in cases.
Tombstones.
Tongues, animal.
Travellers' Patterns.
Trays, paper.
Tubing, Copper and Brass, except locomotive tubes.
Turpentine, in cans, jars, and boxes.
Type, new.

Upholsterers' and Coach Trimmings.

Varnish, in tins.
Vermicelli.
Vinegar, in carboys.

Washing and Wringing Machines, if not declared at owner's risk.
*Waste Silk, dressed or spun.
Wearing Apparel and Household Linen.
Wheels, Coach and Carriage, at company's risk.
Window Sashes and Mouldings, if not declared at owner's risk.
Wines and Spirits, in hampers.
Wines and Spirits, in jars or bottles containing 2 gallons or under.
Jars and Bottles only to be carried when protected by basket work.
Wood Acid, in carboys.
Wood Patterns, for castings
Wooden Busks.
Woollen and Worsted Goods, not elsewhere specified.
Yeast, German.
Yeast, small lots.
Zaffers.

FIFTH CLASS.

The rates for this Class include collection and delivery at the Stations only where the Companies have a staff for that service.

No rate including cartage to be quoted by any Company for any article weighing more than THREE tons, without first ascertaining that the other Terminal Company is prepared to perform such cartage.

N.B.—*It is not competent, without consent, for any Company to convert a Carted rate into a Station to Station rate, by deducting an amount for Cartage, but all Goods should be invoiced at the rates which have been agreed to.*—(Goods Man. Min., April 1863.)

Alabaster Ornaments and Figures, packed, at company's risk.
Aluminium.
Amber.
Animals and Birds, stuffed, in cases (as Furniture).
Basket Carriage and Gig Bodies, finished, in cases or matting, if not declared at owner's risk, 20 per cent. more than 5th Class Rate.
Do. at owner's risk. } Minimum 1 cwt.
Basket Carriage and Gig Bodies, unfinished, whether sent simply or in bundles, minimum 1 cwt.
Bath Chairs, at owner's risk. If not so declared 20 per cent. over 5th class, minimum 3 cwts. Only to be carried in cases or matting.
Beds and Bedding (as Furniture).
Bedsteads, iron, fitted up (as Furniture).
Bedsteads when carried along with other Furniture to be charged as Furniture.
Billiard & Bagatelle Tables (as Furniture).
Billiard Tables, Slatebeds of.
Birds and Animals, stuffed, in cases (as Furniture).
Bonnets.
Bonnet Fronts, at company's risk.
Bonnet Shapes.

Cabinet Ware (as Furniture).
Chairs, Bath (see Bath Chairs).
Chairs, Windsor and Common, new.
Chairs, other than above (as Furniture).
Chandeliers and Gasaliers (as Furniture).
*China, in boxes.
Cigars.
Cinnamon.
*Clocks, English & French.
Cornice Poles, as Furniture.
Crabs (see Fish).

* Included in the Carriers' Act.

FIFTH CLASS—*cont.*

Crape.
Crinolines.

Elephants' Teeth.
Embroidery.
*Engravings.

Feathers.
Figures and Ornaments, Alabaster, packed, at company's risk.
Figures, Stucco, packed, at company's risk.
Fish:—
All Fresh Fish (not including Shell Fish), except Herrings, Sprats, and Salmon, in boxes.
Shell Fish—
Crabs.
Lobsters.
Furniture, when packed in cases and frames.
Furniture, when packed in mats or sent loose, 20 per cent. extra, unless the owners undertake in writing, or by special consignment note, to relieve the Companies from all damage, in which case the Fifth Class Rate to be charged.
Furniture, in vans, carts, or frames, for gross weight of the furniture, and van, cart, or frame, including collection and delivery, the van, cart, or frame to be returned free, Station to Station.
"Empty Furniture Vans when sent to be filled are to be charged, but the charge is to be remitted upon proof being given of their having returned laden by the same route." — (Goods Man. Min., July 1863).
*Furs.

Game.
Gasiliers and Chandeliers (as Furniture).
*Glass, stained, plate, and shades, at owner's risk.
Gloves.

Hats of all kinds.

Iron Bedsteads, fitted up (as Furniture).
Bedsteads, when carried along with other Furniture, to be charged as Furniture.
Ivory.

*Lace.
Lobsters (see Fish).

Machines, sewing.
Mattresses (as Bedsteads).
Millinery.
*Mirrors, at owner's risk.
Mushrooms.
†Musical Instruments.

†Organs and Organ Work, loose at company's risk.
Ornaments and Figures, Alabaster, packed at company's risk.

Papier Maché Goods, except Trays.
Parchment.
Perambulators, packed in cases, crates, or boxes.
Perambulators, not packed.
Perfumery.
†Pianos.
Pianos, not packed in any way, when tendered for conveyance, to be refused, unless senders relieve the companies from all liability.
*Pictures.
Poultry, alive.

Ribbons.

Sewing machines.
*Silk, manufactured.
*Silk, raw.
*Silk, Velvet.
Skeleton Sofas (as Furniture).
Slate Beds of Billiard Tables.
Spirits of Wine (as Wine and Spirits).
Sponge, Turkey, in cases.
Stucco Figures, packed, at company's risk.
Stuffed Animals and Birds, in cases (as Furniture).

Teazles.
Tin Ware, loose.
Tortoiseshell.
Turtle.

*Velvet, silk.
Ventilators.

Wines and Spirits, in jars and bottles, containing above 2 gallons, and not more than 4.
Exceeding 4 gallons 20 per cent. above 5th class.
Jars and Bottles only to be carried when protected by basket work.

* Included in the Carriers' Act.
† Pianos, Organs, and similar musical instruments to be charged as Furniture, when carried with Furniture.

APPENDIX CQ.

TO THE CHAIRMAN AND DIRECTORS OF RAILWAY COMPANIES CONNECTED WITH THE METROPOLIS.

The MEMORIAL of the undersigned Merchants, Brokers, Sugar Refiners, Wholesale Grocers, and others interested in the Commerce of London.

THE Memorialists, in addressing the Railway Boards of lines connected with this City on the subject of the Tariff of Charges, beg to represent that London is placed in a very unfavourable position in comparison with some of the outports in reference to the carriage of sugar—the facilities given by the railways leaving London not being equal to those offered to the outports by other railway companies; from which cause the trade in sugar in the metropolis has materially suffered.

The Memorialists have been led to investigate the subject by observing that the London sugar trade has been for a series of years gradually decreasing, simultaneously with an

increasing commerce in the article at the outports. The raw sugar entered for home consumption in London, which in 1860 reached upwards of 222,450 tons, fell last year to 178,600 tons, showing a decrease of 44,000 tons, whilst the quantity for Liverpool during the same period presents an increase of 28,000 tons; and by means of special rates made to Birmingham and the great centres of consumption by the northern lines, the sugar trade of Glasgow has in the same time increased 51,000 tons.

These facts are important in themselves, the cost of conveyance entering so materially into the calculations of the buyer; but when regarded with a view to the future, they become eminently worthy of attention. It is evident that the lower rate of carriage, when added to the other advantages possessed by the provinces in cheaper coal, labour and water, than the London refiner can command, are considerations which render it essential to the development of fair competion that a ton of sugar should, *ceteris paribus* be carried from London as cheaply as from Glasgow: and it is submitted that perfect equality in dealing with the scale of charges as between London and the outports is what the Memorialists are entitled to by the very policy of our railway legislation, as well as by sound principles of political economy.

It is therefore earnestly requested that,—

1st.—The Directors of the various Companies to whom this Memorial is addressed will forthwith each appoint a competent officer of their establishments respectively, to confer together in the view of equalizing the mileage rates for the conveyance of sugars, and granting an equitable reduction in favour of the London sugar trade.

2nd.—The Conference will afford the Memorialists opportunities of attending their deliberations, and more fully stating the details of their case.

MEMORIAL of the COMMITTEE of SUGAR REFINERS and WHOLESALE GROCERS of LONDON on the RAILWAY TARIFF of CHARGES for the CONVEYANCE of SUGAR, and other Papers connected therewith.

ALTHOUGH the Memoralists, in their general character as merchants and traders, have a deep interest in the whole economy of the railway transit of the United Kingdom, and are materially affected by any obstructions presented by railway management to the free distribution of commodities, they desire at this time to confine their strictures upon the subject of goods traffic, entirely to that branch of commerce which concerns the trade in sugar.

London, as the seat of government, and of a population that may be regarded as almost a nation in itself—the place to which a very large proportion of the whole income of this kingdom is drawn—and the centre of the trade, the shipping, and the financial operations of the world, enjoys advantages for the pursuit of commerce peculiar to itself. It is not only the largest market in reference to consumption, but also in the power of purchase. Both foreign and home vendors of every description of commodity know that in London they can command an immediate sale upon which they cannot rely elsewhere. Shippers and supercargoes naturally turn a preferential attention to a port where they are always certain of customers at a price. To such a mart the trade in an article of such universal consumption, and applicable to such a variety of uses, as sugar, should be especially attracted. An extensive foreign demand is incident to the very fact that London is by far the largest shipping port and market for money in the world. If the different classes in this city concerned in promoting the trade in sugar could only understand their own interests and co-operate with each other in their common and mutual advantage, London should entirely outstrip provincial competition in reference to this commodity.

A new feature has of recent years characterized this department of enterprise. Raw sugar has rapidly given place to refined in domestic use. A comparatively insignificant proportion of the whole supply passes into consumption in an unmanufactured condition. The tastes and habits of society have combined with other causes to supersede in a great measure the consumption of the article in its raw state—and, to meet the wants of the public, the processes of conversion have become very largely extended.

Yet, with all these means and appliances for the promotion of an extended business, and in the face of the fact that the general commerce of London is in progressive development, it is very certain that the *trade in sugar in the metropolis has steadily decreased*, in strict coincidence with a proportionate advance in the demand for the commodity in the provinces. While the quantity entered for home consumption in London in 1860 reached 222,400 tons, it fell last year to 178,600, equal to a progressive decrement of 44,000 tons. The quantity entered for Glasgow has advanced in the same period 51,000 tons, and for Liverpool 28,000, presenting a contemporaneous increase of 79,000 tons. The London consumer is served with at least as good an article, and certainly at as low a price, as the provincial buyer can command. Yet one refinery after another has been closed in London, simultaneously with the opening up of new establishments at the outports. It is in the competition for the custom of neutral markets that the London refiner finds he is losing ground; and after a careful analysis of the whole incidence of the trade, the Memorialists are persuaded that the *result is attributable to the preferential traffic rates of carriage given by the northern lines of railway to the refiners at Liverpool and Glasgow*, as contrasted with the exorbitant rates charged by the traffic managers of the lines radiating from London. Had the trade at the outports suffered in sympathy with that of London—had it only maintained its normal condition while that of the metropolis retrograded, the Memorialists might have looked to other causes to account for the decline; but where it is obvious that the business done in the north increases even in a greater ratio than the decrement in the metropolis, the result must be attributable to the sympathy of a mutual relation common to both. From a tabulated statement of such returns as the Memorialists could procure, they extract the figures which follow:—

RATES OF CARRIAGE for Cask Sugar between the undermentioned Places—

From	Distance.	Rate per ton per mile.	Rate per ton per 100 miles. £	s.	d.
Glasgow to Birmingham	302	1*d.*	0	8	3
Bristol to Birmingham	92	1 6-10ths.	0	13	3
Liverpool to Birmingham	98	2 2-10ths.	0	18	0
London to Birmingham	113	2 3-10ths.	0	19	2
Glasgow to Dudley	286	1	8	8	9
Bristol to Dudley	94	2	0	16	10
Liverpool to Dudley	97	2	0	16	4
London to Dudley	121	2 3-10ths.	0	19	3
Glasgow to Worcester	292	1 2-10ths.	0	10	3
Bristol to Worcester	66	1 8-10ths.	0	15	2
Liverpool to Worcester	100	2	0	16	8
London to Worcester	115	2 4-10ths.	1	0	3
Glasgow to Derby	310	1 4-10ths.	0	12	1
Bristol to Derby	136½	1 8-10ths.	0	15	3
Liverpool to Derby	92	2 5-10ths.	1	0	10
London to Derby	127	2 2-10ths.	0	18	4

From	Distance.	Rate per ton per mile.	Rate per ton per 100 miles. £	s.	d.
Glasgow to Gloucester	400	0 7-10ths.	0	6	1
Bristol to Gloucester	37½	2 2-10ths.	0	18	10
Liverpool to Gloucester	147	1 3-10ths.	0	10	10
London to Gloucester	114	2 1-10th.	0	17	6
Glasgow to Nottingham	298	1 3-10ths.	0	10	10
Bristol to Nottingham	152	1 7-10ths.	0	14	6
Liverpool to Nottingham	101	2 4-10ths.	1	0	2
London to Nottingham	125	2 4-10ths.	1	0	0
Glasgow to Oxford	413	1 1-10th.	0	8	10
Bristol to Oxford	65	3 1-10th.	1	5	7
Liverpool to Oxford	201	1 6-10ths.	0	13	2
London to Oxford	63	3 2-10ths.	1	6	5
Glasgow to Manchester	233	0 8-10ths.	0	7	2
Bristol to Manchester	178	1 5-10ths.	0	12	6
Liverpool to Manchester	35	3	1	5	6
London to Manchester	186	1 7-10ths.	0	14	7

The Memorialists are perfectly aware that unless they can make the redress of their grievances compatible with the promotion of the interests of the railway proprietors, to whom they make this appeal, they are merely wasting the time of all parties. It is therefore to this consideration that they would chiefly confine what more they have to say on the subject.

Coal is an article which enters largely into the manufacture of sugar. The distance from Glasgow and Liverpool to the coal-fields is short, and in that respect the custom of the refiners of those ports is not very profitable to the railways in the shape of carriage. The farther coal has to be carried, the more lucrative must be the process of manufacture to the railway interest. If the coal which costs 6*s.* per ton to the Glasgow refiner is charged 16*s.* or 17*s.* to his metropolitan competitor, the difference must represent the profit of each respectively to the carrier. It is obviously greatly to the interest of the railways to encourage the manufacture at the greatest remunerative distance from the seat of the coal supply. It is equally to their advantage to sustain the London refiner in his competition for the custom of distant markets. The farther the sugar has to be sent from London, the greater must be the traffic secured to the Metropolitan railways. In the keen struggle for business, and the precision to which the calculations of the retail dealers are now reduced, the mere "turn of the market" makes the whole difference between a large as well as progressive trade, and no trade at all. A liberal reduction in the charge for carriage may open many refineries that have been closed, and encourage the erection of many more. London ought to be the cheapest market from the very fact of its being the largest—and to the cheapest will be attracted not only the most extensive demand for all the heavy materials that enter into the manufacture of the article, but the greatest number of traders—railway travellers—from all parts to the common market—the distribution of whose purchases will form another source of increased goods traffic to the London lines.

The district of the metropolis produces none of the elements of which the manufacture of sugar is composed. Every requisite of the refinery must be brought from a distance; and when the process of conversion has been completed, the area of distribution extends over the whole kingdom. The consumption of the article is limited practically only by the price; the slightest fractional increase or reduction is instantly felt by a market peculiarly responsive to the oscillations in the cost. It is not too much to say that, could the charge on the carriage of sugar be materially reduced, not only would the decreasing delivery of 44,000 tons be arrested in its declining course, but a considerable increase of the traffic would immediately take place, and by proper arrangements on the part of the railway boards, London might again take the position it formerly held as the best and cheapest market in the kingdom. That any of that traffic should be water-borne is a reproach to the management of the railways, in reference to an article which the distributers would always prefer to convey by rail if the tariffs of the companies would reasonably admit of it. The alteration in the sugar duties adopted by Mr. Gladstone in 1864 has materially stimulated the import of foreign refined sugars by sea direct to Hull and other outports, and greatly superseded railway traffic, both in the conveyance of the elements of the refining process, and of the manufactured article; so that any unreasonable treatment of the London dealers which would drive them to have recourse to water-carriage, by which the shipping trade is even now extending its connexion with lines from the coast to the interior, might lose to the metropolitan lines a valuable traffic, which, once established in other districts, might prove wholly irrecoverable.

The difficulties with which the Memorialists have to contend in sustaining a competition in neutral markets with the outports are not the less real that they are local and natural. Labour, water, fuel, are all dearer on the Thames than on the Clyde and the Mersey; and the elements of the manufacture are therefore more expensive. Against these disadvantages the Memoralists are willing to bear up, and, as they believe, able to contend; but as it is the last straw that breaks the camel's back, so the Memoralists find themselves overweighted, when, in addition to these formidable drawbacks, they have further to struggle against differential traffic rates in favour of those competitors who are already armed for the contest with superior local and natural facilities. The scope and spirit of the policy of Parliament in reference to railways have assumed that these institutions are legalized in the public interest; that their proprietors shall not be suffered to abuse their great powers to the effect of interfering with the natural laws which regulate commerce, and the ordinary course and operations of trade; and that all subjects of the Crown shall be dealt with on the same conditions, under equal circumstances. Without such precautionary stipulations it is obvious that those who have practically a monopoly of the carrying trade, by exclusive powers of railway construction conferred by statute, could really dictate the locality and conditions of business throughout the country.

Whilst the Memorialists seek no peculiar immunities for their own special interest, they ask at least equal rates and a liberal spirit of co-operation on the part of the railway companies in the pursuit of a branch of trade in the success of which they are mutually interested. They desire but that these companies shall assist in that which is a common interest to both, and in an undertaking which is virtually joint adventure. With an increasing trade, the Memorialists would add to the profits of conveyance; by moderating and equalizing the charges of conveyance, the railways permit the sugar importers, refiners, and dealers to extend their trade—while by exacting from the Memorialists larger freight charges for equal distances than prevail elsewhere, the railway companies put it out of the power of the Memorialists to sustain the competition with districts at once more highly favoured by natural position and by artificial advantages in the way of preferential freight rates. The districts northwards enjoy these advantages just in the ratio in which they cease to contribute to the revenue of railways,—the manufacturers going to the fuel in place of employing the railways to bring the fuel and others materials of manufacture to them. That sugar should be carried per ton per mile from London as cheaply as from Glasgow is what the Memorialists are entitled to claim by the avowed policy of railway legislation, as well as by sound principles of political economy. They ask no more than this, and they very confidently contend that they ought not to rest satisfied with less. While opinions may vary and even differ as to the causes for the depression of the London sugar trade, there is no difference whatever of opinion among wholesale dealers that a reasonable reduction of traffic rates would provide an efficient remedy, and create a complete revival. A reasonable reduction upon the carriage would afford a sensible relief to the suffering interests of the Memoralists—who now appeal with confidence to the directors of the metropolitan lines to co-operate with their constituents in sustaining a competition in which their profits are identified with the lucrative promotion of railway traffic.

London, October 31, 1865.

Sir,

I am instructed by the Committee of sugar refiners and wholesale grocers of London to subjoin for your information copies of a letter from the Great Western Railway Company on the subject of their tariff of rates for the carriage of sugar, and of their answer.

I am further to state, as the Committee are given to understand the chief lines from London act in this matter in concert, and have arrived at a decision as to their course virtually for the same reasons, that the Committee take the liberty to request, you will regard their answer, in so far as it is applicable to the circumstances of your position, as being also addressed to you, and formally to repeat the proposals made to you in their original memorial.

I remain, &c.

Great Western Railway,
General Manager's Office, Paddington Station,
London, September 28, 1865.

Sir,

Since the receipt of your circular on the subject of the tariff of charges for the conveyance of sugar, and enclosing a memorial from the sugar refiners, brokers, &c. of London, I have been making inquiries with reference to the rates charged for the same descriptions of traffic sent from the other ports.

A great many of the statements contained in the circular and the memorial, which are put forth as facts, are incorrect, because they are based on incorrect data; the rates on which the calculations are based having been divided on an erroneous basis without reference to the extra cost of cartage in London as compared with that at the other places.

The matter has been very fully gone into, and it has been shown conclusively that the London rates are perfectly fair as compared with those in force from Bristol, Hull, Glasgow, &c., and in course of the inquiry it was elicited that the decrease in the London manufacture was not attributable to any inequality in the rates, but to the superior article supplied, the increased credit given, and the greater facilities afforded at the other ports as compared with London.

Under these circumstances, therefore, I beg to state that, as far as this company is concerned, we are unable to comply with your request.

I am, &c.

31, Bush Lane, Cannon Street,
London, October 31, 1865.

Sir,

I am instructed by the Committee of sugar refiners and wholesale grocers of London to acknowledge receipt of your letter of 28th ultimo in reference to railway charges on the carriage of sugars, the answer to which has been delayed until the Memorialists had an opportunity of fully considering it in conjunction with the replies of other companies.

The Committee desire me to express a well-founded dissatisfaction that the railway companies should have come to a decision on the subject of their memorial without adverting to its second and concluding request, that the Conference would afford the Memorialists opportunities of attending their deliberations, and more fully stating the details of their case. Representing an important commercial interest, and an extensive body of customers to your traffic, they were entitled to expect that, as men of business, you would have seen it to be your interest as well as your duty to meet face to face those who form a not unimportant body of that public upon whose enterprise you must depend for your dividends, to confer upon concerns which are in the strictest sense mutual, and in which you and they stand in the purely mercantile relation of buyer and seller. The Memorialists have the greater reason to

complain of this course because you have disputed their statements, in point of fact, without affording them an opportunity of testing their correctness in verbal discussion. The only instance of inaccuracy you particularize is the allegation that the memorialists have calculated the rates of carriage "without reference to the extra cost of cartage in London," and on that point they have to state, that on one of their number, Mr. George Startin, of Fenchurch Street, proposing to the manager of the London and North-western Railway Company, who acts in this matter in concert with yours, to find his own cartage on being allowed a deduction from the whole charge for conveyance, of the extra cost of collection; he was informed that extra cost for cartage was so small that no allowance could be made on that account, and the Memorialists have reason to believe that the arrangements made with the carriers for the companies have in view the provisions of the Act of Parliament for compelling railways to charge all persons alike under similar circumstances, by mixing up and thereby confounding the question of cartage with that of the tariff of rates for carriage on the line.

The tariff which came into operation on the 1st ultimo, can be said not to be an alteration for the mere sake of change only because the memorialists can see scarcely any appreciable difference between the new scale and that which it supersedes.

You are pleased to express the opinion that the depression in the London sugar trade is not to be attributed to railway rates, but, as is alleged, to the better description of sugar produced in Scotland against that produced in London, and the lower price and more liberal terms of credit and discount allowed on Scotch refined sugar. The expression of that opinion involves the admission that the London sugar trade *is* depressed; it also, by evading entirely, admits by implication the charge against your system, preferred by the Memorialists, that it deals out one measure to Scotland and a much harder one to London, and it tacitly concedes that the prosperity of the Scotch sugar trade results from the article being supplied to the purchaser on cheaper terms than he can realize by dealing with the metropolis. It is quite clear that it can make no difference to his inducements in the selection of a market whether his saving is in discount or in carriage. The Memorialists do not admit that they either supply an inferior article or trade on less liberal terms than their competitors. If they do, they are perfectly prepared to suffer the consequences of all self-imposed disadvantages, and to accommodate their terms to the requisitions of their business. But whether they do or not is entirely beside the question they have raised. They complain that your charge per mile for carriage is higher from London than from Scotland. You do not answer that charge, and the Memorialists maintain that your treatment is a violation of the general policy enforced by Parliament in reference to railway traffic, and involves the assertion of a principle which, if carried out, would place it in the power of the railway interest to dictate the whole course of the commerce of the country.

All that the Memorialists contend for is, "that a ton of "sugar should *cæteris paribus* be carried from London as "cheaply as from Glasgow, and for perfect equality in "dealing with the scale of charges as between London and "the outports." They do not request this concession as a favour, but demand it as a right. They applied to yourselves in the first instance to do them justice. In the hope that you may yet consider it consistent not only with your duty but your interest, to comply with a solicitation so obviously founded on fairness and sound policy, they now beg leave formally to repeat the proposals embodied in their memorial, and they have only to conclude with the expression of a hope that they may not be driven to an appeal to the Royal Commission to redress a grievance which your own good sense ought to meet by a reasonable and timely concession.

(By order.)
I remain, &c.

Secretary.

A. B. Beasley, Esq.
General Manager,
Great Western Railway, Paddington.

To the Chairman and Members of Committee of Railway Companies on the Tariff of Rates for conveyance of Sugar.

Gentlemen,

The London Committee of Sugar Refiners and Wholesale Grocers, whom you favoured with a conference on the 12th December last, retired from that meeting under the impression that you would, after privately consulting together, oblige them with the communication of your determination on the subject of a modification of your current tariff. I am to express the hope that their anticipation in this respect will in due time be verified, and, in the meantime, they beg leave to submit the following suggestions for your candid consideration.

You cannot, I think, expect my constituents to acquiesce in the doctrine which seemed to be implied in your argument, that you could not listen to any requisition based upon the principle of a mileage rate. The idea that the limit to your exactions is not that of cost and of a reasonable profit on the actual service performed, but simply that of the ability of your customers to pay, is a proposition to which they must entirely demur. They do not regulate the price of their sugar by the income of the purchaser. They do not think of contending that, as the cost of the carriage of their sugar to Croydon or Staines will be less than to Derby, therefore they should be entitled to add the saving thereby effected by the buyer to the price to be charged by the producer, nor do they charge more to the retailer or confectioner who makes a profit out of the distribution or manufacture of the commodity than to the private consumer. The postulate that you are justified in exacting as much for carriage from London to Birmingham as from Glasgow to Birmingham, because the whole cost of the article when delivered is not more in the one case than in the other, proves too much. It implies that you would be warranted in charging as much for five miles as for 500, and it would perfectly justify the Glasgow produce in arguing, by parity of reason, that you should carry his goods 500 miles as cheaply as you carry those of the London refiner 50, because they both pay the same price for the raw material, and both purchase in the same market, while he can get no more from the Birmingham consumer to make up for the greater distance. The notion that public carriers or ordinary traders are to regulate their prices, not by their own costs of production and profit, but by the circumstances of their customers, is a novelty in economical science, in the soundness of which the Memorialists can by no means acquiesce. They do not regulate their bargains by any consideration of the profits of the respective purchasers. They sell as cheaply to the retailer, who buys much, does a ready money business, gets quick returns, and retails in a great thoroughfare, as to the smallest dealer with the slowest trade. If the Memorialists are nearer Birmingham than their Glasgow competitors, they are very much farther removed from coal fields, from cheap water, from low-priced labour, and, probably, from cheap money. To regulate your tariff by the circumstances of your various customers is really to assume the power of confiscating their respective natural advantages. It is to tell them that you, not they, are to reap the profits, either of their superior skill, their greater capital, or their better local position. In fact, it is to proclaim the principle that railways, the statutory highways of the country, deriving their powers entirely from considerations of public policy, bound by the legislation applied to them to treat all subjects under similar circumstances alike, are to be entitled to look into every merchant's profits, to make one man pay for the disadvantages under which another labours, to say where business shall be fostered and where it shall be discouraged; in fact, to regulate the trade of the nation, not by its own exigencies, but in subserviency entirely to railway competition and dividends, or to the traffic arrangements by which the advantages of competition have been lost to the public.

The Memorialists must take leave to deny that railway companies are to be placed in the same economical category as other traders. "Any man," observes the Committee of London Merchants on Railway Goods Traffic, in their report of 1850, "may place their own boat on a canal, his own "vehicle on a road, or his own ship or steamer on a navigable river, choosing his own time, loading and unloading "at his own pleasure, regulating his load or his classification of goods as his interest or convenience prompts him. "The fullest and freest competition is open to all. If the "public are dissatisfied with the punctuality, the carefulness, the charges of one carrier, lighterman, or shipowner, "it is open to them to employ another and to choose one "line of road, river, or canal, to arrive at a common destination in place of another. But railway companies have "acquired the exclusive privilege of the carriage on their "lines, the rapidity of locomotion attained by the railways "induces an universal preference by passengers for that "method of conveyance, and as goods without passengers "will not support any other medium of transit, roads cease "to be kept up, steam boats stop plying, barges and "lighters fail to maintain the struggle against their powerful adversary, and at last the public are left without any "other means of transit than railways, and become gradually the subject of an unavoidable monopoly." The Railway Commissioners, in their Report of 1848, pages 50, 51, and 52, justify the interference of the Legislature with

the management of railways or the express ground, "that "they form an exception to the rule of ordinary commer- "cial enterprise, that in coming to Parliament for exclusive "powers, they give Parliament the right of stipulating the "conditions on which such powers shall be cancelled, and "that, as it has been found that the original supposition "that a railway might be the property of one company, "and the traffic on it might be carried on by other com- "panies or by private individuals is wholly impracticable, "the principle of competition is not applicable to such an "undertaking." The House of Commons, in its own report of 1846, observes that "in return for their monopoly "companies ought to submit to an efficient system of "control with a view to the security of the public against "extravagant fares and charges and the adoption of uni- "formity on the different lines in the scales and in the "mode of charging." The Memorialists need scarcely add that both by private and the general Railway Acts, the companies are bound to uniformity in their rates of charge. Chief Justice Wilde observed, in determining this very point, "By law, they (the companies) have no right to "charge any person more than the ordinary and usual "rate." They must charge all alike; they cannot say to one trader, "I shall charge you one farthing," and to the next "one penny." That would interfere with and contract trade in a strong degree, and would enable one man to undersell another. Therefore, the Legislature has said, "you are in a situation by which you excite competition, "and you shall charge all the public equally for the same duty."

It is very clear that the unequal treatment to which the Memorialists have been subjected, and the line of observation adopted by your board meeting at the conference are utterly ignored by the authorities above cited and by the rudimentary principles of political economy. It cannot fail also to occur equally to the Memorialists and to your board as a striking verification of the preceding quotations from the most eminent mercantile, judicial, and parliamentary authorities, that in place of free trade and healthy competition being the result of leaving railways to the management of private enterprise, the very conference which has been the occasion of this representation is really a combination of railway companies to agree upon a common course of action to secure themselves against mutual rivalry in favour of the public. The Memorialists, however, not representing the general interest of commerce, and having presented their case as that only of a class of merchants who are desirous to confine themselves to the particular merits of their own concerns and to arrive at some practical conclusion in reference to their special grievance rather than to discuss the general question.

Referring to their former statement, the Memorialists will shortly add the few following considerations:—

1st. The charge for collection and delivery fixed at the railway clearing house for 1865 is for London 8*s.* 6*d.*, and for the country towns 4*s.* 6*d.* per ton.

2nd. While the deliveries of sugar for London amount to one-third of that for the whole kingdom, an increase of the trade in refined sugar of 200,000 tons has only yielded 20,000 tons or one-tenth, as the share of the general progress enjoyed by the metropolis.

3rd. The carriage per ton per 100 miles from the Clyde, to eight leading English towns is 9*s.* 2*d.* from Bristol, 16*s.* 5*d.*; from Liverpool, 7*s.* 8*d.*, and from London 19*s.* 5*d.*, or 111 per cent. above the Glasgow rate.

The operation of this is very palpable in the relative position of the sugar trade on the Thames and on the Clyde. While for the year 1864 the stock in London amounted to - - - 110,214 tons
Landings - - - - 227,932 „
Duty paid for home use - - 180,444 „

518,590 „

And in Glasgow to stocks - 24,306
Landings - - - 129,075
Home use - - 127,275

280,656 „

Difference 237,934 „

For 1865, the quantities
in London were - 505,364
In Glasgow - - 309,324

196,040 „

41,894 „

Reducing to the prejudice of the Thames the difference between the trade of the two ports by tons in a single year.

4th. The inequalities of charge from the same town are quite as unaccountable. From Liverpool to Glos'ter the charge is 10*s.* 10*d.*, to Dudley 16*s.* 4*d.*, to Derby 20*s.* 10*d.*; the difference in mean distance being just five miles and a half.

5th. The falling off in the deliveries from London has been most felt in those towns where the railway charges have been the most unequal, to the prejudice of the metropolis, while in those districts where the freight from London has not been unduly raised above that from the outports, the metropolis still fairly holds its ground.

In compliance with the invitation of the conference, the Memorialists beg leave to say that the districts in reference to which they were, urgently stand in need of relief from the inequalities of the present tariff, are the Midland, Staffordshire, and Yorkshire, and that especially they solicit a material reduction in the charges to Birmingham, Dudley, Nottingham, and Derby.

The Memorialists would venture to enter their protest against the excess of charge for collection and delivery to which London is subjected in comparison to the outports, to advert to the growing competition of the continental refineries encouraged by large Government bounties, and to the fact illustrative of the argument based on the difference between the mileage rate and the gross charge that the cost of manufacture and distribution in London is much greater than it is or need be at the northern outports.

In conclusion the Memorialists would add that their chief reason for founding their calculations upon mileage rate was this, that they maintain the proposition is entirely inexpugnable, that the cost of the railway company per mile of carriage from Glasgow is the measure of the cost per mile to the company from London. That if a railway can realize a fair profit upon conveying sugar from Glasgow to Birmingham at one penny per ton per mile, which is not denied, it can perfectly well afford, with its heavy additional charge of cent. per cent. for collection, to carry sugar from London at the same rate, and that the excess of 125 per cent. in the rate from London is wholly without reasonable excuse.

I remain, &c.
(By order)
(Signed) SIDNEY SMITH, Secretary.

London, February 1866.

APPENDIX CR.

LETTER from the BOARD OF TRADE on the subject of TERMINAL CHARGES.

SIR, Whitehall, 25th May 1866.

THE Lords of the Committee of Privy Council for Trade direct me to request that you will lay before the Royal Commission on Railways the following reply to your letters of the 11th and the 23rd instant, on the subject of *Terminal Charges*.

In your letter of the 11th you observe that in many of the later Acts of Parliament for railways a proviso has been introduced into the toll clause having reference to what are generally denominated *terminal charges*, and the Board of Trade are asked to give to the Commission information in regard to the introduction of that proviso into railway Acts, and as to any other proceedings that may have taken place in reference to legislation on the subject generally.

Your letter is accompanied by an extract from clause 39 of the Special Act 24 & 25 Vict. c. cxcix. (1861) which is in the following terms, viz.:—"And with respect to the convey- "ance of horses, cattle, carriages, and goods, the maximum "rates of charges to be made by the company, including "the tolls for the use of the railway, and waggons or trucks, "and locomotive power, and every expense incidental to "such conveyance, *except a reasonable sum for loading, "covering, and unloading of goods at any terminal station "of such goods, and for delivery and collection and any other*

"*services incidental to the business or duty of a carrier where* "*such services or any of them are or is performed by the* "*company*, shall not exceed the following sums;" and the excepting part of that clause was underlined as being the proviso to which you allude in your letter.

In your letter of the 23rd instant it is asked that the inquiry may include the subject of legislation as to specifying the terminal charges in accounts delivered by the company, and reference is made to the following words in clause 76 of the Act 22 & 23 Vict. c. cx.:—

"Distinguishing how much of such charge is for loading and unloading, covering, collection, delivery, and for other expenses, but without particularizing the separate items of which the last-mentioned portion of the charge may consist."

The excepting proviso referred to in your letter of the 11th appears to have become settled in its present form in the session of 1861. Railway legislation (if it may be so called) on this subject may be traced through various changes prior to the adoption of that form.

In the Act for making a railway or tramroad from Liverpool to Manchester (7 George 4. c. xlix.) (1826) is a clause (s. 138) limiting the rates which the company may charge for "carriage and conveyance" of goods, &c., including the rates to be charged as tolls, which is followed by a proviso (s. 139) to the effect that in all cases where anything shall be carried for so short a distance that the authorized rate for carriage shall not amount to 2*s.* per ton the company may demand 2*s.* per ton.

Similar provisions (though differing in the amount of the "short distance" charge) are contained in various railway or tramroad Acts down to the year 1833.

In the Act for making the "Grand Junction Railway," 3 Will. 4. c. xxxiv. (1833) the company were authorized (s. 154) to demand certain limited rates or tolls "for the "tonnage of all articles, matters, and things which shall be "carried or conveyed upon or along the said railway, or any "part thereof;" and further (s. 156) to make for carriage and conveyance by the company "such *reasonable* charges "as they may from time to time determine upon, in addition "to the several tonnages and tolls herein-before authorized "to be charged and received." Those clauses being followed by a proviso (s. 160) that—

"In all cases where any of the above-mentioned articles, matters, persons, or things shall be carried or conveyed by the said company or any other person on the said railway for a less distance than six miles the said company are hereby empowered to demand and receive the afore-mentioned rates or tolls for six miles, together with a reasonable charge for the expense of loading and unloading the same in cases where loading and unloading shall be done by the company."

Similar provisions limiting the rates of toll for the use of the railway, and authorizing any "*reasonable* charges" for *carriage by the company*, with a six or four miles "short distance" clause, appear to have been adopted in the several railway Acts down to the session of 1841.

In that session the Acts not only limited the tolls for the use of the railway, but also limited the charges which the company might make for supplying carriages and locomotive power. About the same time the "short distance" clause took the following form, viz.:—

"For articles and persons conveyed a less distance than (six) miles, the company may demand in addition to the tolls and charges a reasonable charge for the expense of stopping, loading, and unloading."

Down to the year 1846 the special Acts continued for the most part to limit *separately* the tolls for the use of the railway and the charges for the supply of carriages and of locomotive power, but it had not been the practice of Parliament to fix the maximum rate of single charge which might be made for all those matters; and the right to make "terminal charges" seems to have been recognized in the case only of articles and persons conveyed for short distances.

The Select Committee of the House of Commons on the Railway Bills of the Session of 1846, by the 27th resolution in their Second Report (dated 10th February 1846), recommended that—

"The committee on every railway Bill shall fix the tolls and shall determine the maximum rates of charge for the conveyance of passengers with a due amount of luggage and of goods on such railway, and such rates of charge shall include the tolls and the cost of locomotive power, and every other expense connected with the conveyance of passengers with a due amount of luggage and of goods upon such railway; but if the committee shall not deem it expedient to determine such maximum rates of charge, a special report, explanatory of the grounds of their omitting so to do, shall be made to the House, which special report shall accompany the report of the Bill."

On the 2nd April 1846 the House of Commons passed a resolution in those terms, which has ever since been a standing order of that House. It is No. 156 in the present series.

Nevertheless, in the first Act of the session of 1846, which fixed the charges for a railway (9 Vict. c. lii., R. A. 18th June 1846), the clause which fixed the maximum charges was in the following terms:—

"It shall not be lawful for the company to charge in respect of the several articles, matters, and things, and of the several descriptions of animals herein-after mentioned, conveyed on the railway, any greater sum including the charges for the use of carriages, waggons, or trucks, and for locomotive power, and all other charges incident to such conveyance (*except a reasonable charge for the expense of loading and unloading when such service is performed by the company*) than the several sums herein-after mentioned," &c.

Some exception of that kind seems to have been generally but not universally inserted in the clause fixing the maximum charges in subsequent Acts down to 1859.

In some Acts the exceptions took the form—

"A reasonable sum for the loading, unloading, and covering, and for delivery and collection of goods, and other services incidental to the business of a carrier, and a further reasonable sum for warehousing and wharfage, and for any other extraordinary services which may be reasonably and properly performed by the company" (*e.g.* 16 & 17 Vict. c. xcix. s. 52).

Some Acts contained, in addition, a "short distance" clause in the following terms, viz.:—

"For articles or persons conveyed on the railway for a less distance than (six) miles the company may demand, in addition to the prescribed tolls for conveyance, a reasonable charge for the expense of stopping, loading, and unloading" (*e.g.* 9 & 10 Vict. c. lxxxvii. s. 30).

The variations in the form of the exceptions admitted into the clause fixing the maximum rates of charge perhaps resulted not so much from deliberation on the part of the select committees to whom the Bills were referred as from different degrees of skill in the agents of the promoters of the Bills.

The Board of Trade in their general report on the railway and canal Bills of the first session of 1859 made the following observations on the subject of "tolls":—

"In the following Bills (enumerating 22 by name) the clause limiting the maximum rates of charge for the conveyance of goods by the company along the railway will be found to contain an exception authorizing an undefined extra charge for certain matters, which appear to be so closely connected with the conveyance of the goods upon the railway as to render it doubtful whether the clause can be considered to satisfy the requirements of the 132nd standing order of the House of Commons."

"The following is a form of the clause which is here referred to, viz.: 'The maximum rates of charges to be 'made by the company for the conveyance of goods upon 'the railway, including the tolls for the use of the railway 'and waggons or trucks, and locomotive power, and every 'expense incidental to such conveyance, except a reasonable 'sum for delivery and collection, and any other services in-'cidental to the business or duty of a carrier, when such 'services, or any of them, are or is performed by the 'company, and for the use of sidings and stations, shall not 'exceed the following sums,'" &c.

"It is to be observed, that in this form of the clause the extra charge is authorized as an exception from the maximum rates of charge for the conveyance of goods upon the railway. But so far as the 'delivery and collection, 'and other services incidental to the business of a carrier,' are performed by the company on their railway or at their stations, they would appear to be matters the charge for which is within the meaning of the words 'every other 'expense connected with the conveyance of goods upon 'such railway,' as used in the 132nd standing order, and to be therefore not properly separable from the maximum rates of charge for conveyance upon the railway which are to be fixed in pursuance of that standing order.

"If, however, the 'delivery and collection and other 'services' are intended to have reference to carrying to be performed by the company, *to and from*, but not *upon* their railway, it would seem to be desirable that the power to make an extra charge in respect of these matters should, if allowed, be given in a more definite manner than by way of exception to the charge for conveyance upon the railway, a in the above-mentioned form of the clause.

"The importance of marking the distinction between collection, delivery, and other services at the railway (including stations), and collection, delivery, and other services at other places, is shown by a case determined in the Court of Common Pleas on the 15th November 1858 (Baxendale *v.* Great Western Railway Company, 4 Jurist, N.S., 1279), in which a railway company sought, but failed, to justify an

uniform gross charge for goods which they had, and for goods which they had not, carried between the railway and other places.

"An extra charge for the use of 'sidings and stations' is not usually authorized, the charge for places for the receipt and delivery of goods, with the use of which the parties interested in the goods cannot dispense, and without which the company could not carry on their business of carriers, being usually included in the general charge for carriage fixed by railway Acts."

These observations were repeated in the General Report of the Board of Trade on the Railway and Canal Bills of 1860.

Very few railway Acts of the session of 1860 (if any) contain any exception to the charges which are to be included in the authorized maximum rates of charge.

In some Acts of that session which contain no such exception, the clause limiting the maximum rates of charge is followed by a proviso authorizing the company to demand "a further reasonable sum for collection and delivery of "goods and other services incidental to the business of a "carrier, where such collection, delivery, and services respec- "tively shall be performed by the company *elsewhere than* "*within the premises of the company*" (*e. g.* 23 & 24 Vict. c. xc. s. 44.)

The Board of Trade, in their General Report on the Railway and Canal Bills of the Session of 1861, repeated the above quoted observations of 1859 and 1860, with the addition of the following, viz.:—

"By several Bills it is proposed to authorize an extra charge 'for the use of any warehouse, wharf, or other depôt, 'or other similar accommodation.'

"As it is not in all cases in the power of a railway company to stipulate for payment for the use of their premises, where goods remain in them, without default on the part of the company, for a longer time than would be reasonably sufficient for their being forwarded by the railway, or for their being removed by the consignees after the arrival of the goods, charges for the accommodation now referred to do not appear to be unreasonable; but in such cases it would seem to be proper, either that the Bill should limit the maximum amount of the extra charge to a moderate sum, to be specified, or else that a minimum time of occupation of the company's premises should be specified (say 48 hours), until the lapse of which no charge should be authorized."

In the session of 1861 the mode in which the making of terminal charges should be authorized in railway Acts received especial consideration.

Representatives of railway companies and of promoters of railways brought forward the following "maximum terminal "charge clause:"—

"It shall also be lawful for the company acting as carriers to make a reasonable terminal charge for the accommodation afforded and service rendered by them in respect of any goods or minerals other than the actual conveyance thereof along the railway; provided always, that such charge shall in no case exceed the rate of two shillings per ton for goods and ninepence per ton for minerals at each terminal station of such traffic, unless the matters to which such charge relates shall remain on the premises of the company more than 24 hours, by the desire or default of the consignor thereof, or shall so remain by the desire or default of the consignee thereof, for 24 hours (Sunday, Christmas Day, and Good Friday excepted) after notice of the arrival of the same shall have been despatched to the consignee, in either of which cases it shall be lawful for the company to charge an additional reasonable sum for such occupation of their premises and for services performed by them in consequence of such delay; and when the company performs any service with respect to traffic outside their premises they may charge a further reasonable sum for such service.

"For a fraction of a ton the company may demand the aforesaid terminal charges according to the number of quarters of a ton in such fraction, and if there be the fraction of a quarter of a ton such fraction shall be deemed a quarter of a ton, and small parcels shall be altogether exempt from such terminal charges."

That clause was intended to follow the clause limiting the maximum rates of charge for goods and minerals.

In the course however of the session of 1861 the form of proviso which is contained in the extract annexed to your letter was settled by the concurrence (as my Lords believe) of the noble Lord the Chairman of Committees of the House of Lords and of the General Committee on Railway and Canal Bills of the House of Commons.

That form appears to have been adhered to in nearly all cases in subsequent sessions. But not in *all* cases, for in the Great Eastern Railway Act, 1862, 25 & 26 Vict. c. ccxxiii. s. 230, to the usual exceptions there is added "a "reasonable sum for warehousing and wharfage," and there may be other cases of variation in Acts of 1861 and later sessions.

In special Acts which contain the form of excepting proviso in question there is also inserted a clause defining terminal stations in the following terms, viz.:—

"No station is to be considered a terminal station in regard to any goods conveyed on the railway which have not been received thereat direct from the consignor of such traffic, or are not directed to be delivered thereat to the consignee."

It is also to be observed that Acts containing those provisions usually contain the following, viz.:—

"For articles or persons conveyed a less distance than (six) miles the company may demand tolls and charges as for (six) miles."

"Nothing herein contained shall be held to prevent the company from taking any increased charge over and above the charges herein-before limited for the conveyance of goods of any description by agreement with the owners or persons in charge of such goods, either in respect of the conveyance thereof (except small parcels) by passenger trains or by reason of any other special service performed by the company in relation thereto."

The Royal Commissioners are doubtless aware that similar provisions are contained in paragraphs 8 and 10 (under the head "(iii.) Tolls and Charges,") in the regulations in the schedule to the Railways Construction Facilities Act, 1864.

In reference to the inquiry contained in your letter of the 23rd instant, the Board of Trade have to add the following observations:—

The special Act in which the clause referred to is contained is "The Lancashire and Yorkshire and East Lancashire Railways Amalgamation Act, 1859."

A Bill for the amalgamation of those two railways was before Parliament in the session of 1858. That Bill as introduced did not propose to deal with tolls, &c.; but in Committee of the House of Commons, where the proposed amalgamation met with much opposition, clauses were inserted to repeal previous enactments and to make new provisions with respect to tolls, charges, &c. In the House of Lords, however, all provisions relating to amalgamation, tolls, &c. were struck out, and the Bill was passed for other purposes only.

In the session of 1859 a Bill for the amalgamation of those two railways was again brought before Parliament, containing, as introduced, clauses to repeal previous enactments and to make new provisions with respect to tolls, charges, &c. similar to those which had been added to the Bill of 1858 in Committee of the House of Commons.

The Bill of 1859 also contained the clause referred to in your letter, which requires the company, on the demand of any person paying their charges, to give accounts distinguishing charges for conveyance from terminal charges.

That Bill further contained a clause saving existing limitations of tolls, &c. on any portion of the Lancashire and Yorkshire and East Lancashire Railways, where such tolls, &c. were less than the amount to be authorized in the Bill.

The last-mentioned clause would have the effect of saving the operation of provisions in previous Acts, such as an enactment in the 20th section of "The Liverpool and Bury Railway Act, 1846," which, in respect of goods to be carried by the then Liverpool and Bury Railway Company between Liverpool and Bolton, or any of the intermediate stations, limited the maximum charges which that company might make for certain terminal services in respect of goods, viz., for "loading, unloading, and covering," 3*d.* per ton, for "warehousing" for any period not exceeding six weeks, 9*d.* per ton, and for "delivering" at any distance not exceeding one mile from any station, 9*d.* per ton.

With reference to the proposed provisions relating to tolls, &c. in that Bill of 1859, the Board of Trade, in their report upon the Bill, referred to the above cited observations on "Tolls" in their general report of 1859, and also called attention to the limitations of terminal charges in the Liverpool and Bury Railway Act, 1846, observing "the principle "there recognized appears to be a sound one, inasmuch as "to authorize an indefinite extra charge for 'loading, "'covering, and unloading of goods' may render the limi- "tation of the maximum rates for conveyance on the rail- "way practically useless in the majority of cases. It may, "therefore, deserve consideration whether that principle "should not on the present occasion be adopted with "respect to all the railways, the charges for which will be "regulated by this Bill, by limiting the charges which the "company may make for loading, covering, and unloading "whenever those services may be performed by the com- "pany."

In that report of the Board of Trade it was further pointed out that the provision in the Bill saving existing limitations of tolls appeared to have reference to the Liverpool and Bury Railway Act, 1846, which fixed a lower maximum rate for goods conveyed between Liverpool and Bolton than would be demandable under the provisions of the Bill for goods on other portions of the Railway; and it was mentioned that the Board of Trade had received a complaint from the manufacturers of Preston, urging that the trade of Bolton would continue to receive an undue preference over the trade of Preston by that arrangement.

The Report of the Select Committee of the House of Commons on the Bill of 1859 contained no observations on the points that have been above referred to; and as the Bill passed without alteration in those particulars, it was perhaps considered that in the case of the united Lancashire and Yorkshire and East Lancashire Railways some check was desirable upon the power to make "any reasonable "charge for loading, covering, and unloading, and for "collection and delivery" of goods; and that a provision that the company should on demand furnish accounts distinguishing between the charges for conveyance and the terminal charges would afford a sufficient check, without fixing in the Act specific limitations of such charges.

The Board of Trade are not aware that there has been adopted in the case of any other railway company a provision for the separation of charges for conveyance from terminal charges, such as that in the Lancashire and Yorkshire and East Lancashire Railways Amalgamation Act, 1859, referred to in your letter of the 23rd instant, and of which, in compliance with the request expressed in that letter, some account is above attempted to be given.

I am, Sir,

The Secretary, Your obedient Servant,
Royal Commission on Railways, W. D. Fane.
House of Lords.

APPENDIX CT.

CONDITIONS and FARES for the TRANSPORT of PASSENGERS on the STATE RAILWAYS of BELGIUM.

Translated, for the Commission, from the Official Documents issued by the Belgian Government.

NOTE.—In making this Translation it has been considered expedient to retain the money, weights, and measures in their original denominations.

The following data will serve for their conversion into English units, when required.

MONEY.

25 francs = 1*l.*
1 franc or 100 centimes = 9·6*d.*

WEIGHTS.

1 kilogramme = 2·21 lbs. avoirdupois.
100 kilogrammes = 221 lbs., or nearly 2 cwt.
1000 kilogrammes = 2206 lbs., or nearly 1 ton.

MEASURES.

1 metre = 3·28 English feet.
1 kilometre = 1,094 yards, or about 0·62 Statute miles.
1 lieue or 5 kilometres = 3·1 miles.

Extract from the "Guide Officiel des Voyageurs sur tous les Chemins-de-Fer de Belgique. Mai, 1866."

RAILWAYS OF THE STATE.—NOTICE TO PASSENGERS.

Departure.—Passengers must be at the station at least 10 minutes before the train starts. They are requested at once to present themselves at the ticket office with the exact amount of their fare, in order to avoid exchange of money, and thus to accelerate the distribution of tickets. *At intermediate stations the times of departure stated are only approximate.*

Tickets.—Passengers are not allowed to take their places in the carriages without a proper ticket, nor place themselves in a carriage of a different class than that stated on their ticket. The guards are instructed to collect *also at once the price of the ticket in the cases herein provided for.*

It is equally not permitted to enter into baggage and merchandise, or any kind of waggons, to which access is prohibited.

Police of the trains.—Jumping on a train in motion is not allowed; nor is it permitted to enter into or go from a carriage by any other door than that opposite the office of the station at which the train arrives; nor to lean out of the carriages; nor to leave them until the train has absolutely stopped. Smoking in the waiting rooms is not allowed, nor in the first and second-class carriages, except in those reserved for smokers. Loaded weapons, nor any articles of a nature to incommode the passengers, may not be carried. Neither may a passenger open the window at the side from which the wind blows, unless with the consent of all the passengers.

Passengers must obey the injunctions of the railway officers, or they may render themselves (by the law of 6th March 1818) liable to a penalty of from 10 to 100 Dutch florins or imprisonment of from 1 to 14 days.

Ladies.—A compartment is reserved in every class for ladies travelling alone or with children.

Invalids.—A special carriage, containing a bed and the principal furniture of a bedroom, is in readiness for the transport of invalids, the charge for which is according to the number of places occupied, calculating a compartment at eight first-class places.

The requisition for such carriage should be addressed to the station master at Brussels (Northern Railway).

Children.—In Belgium half-fares are charged for children under eight years of age; children in arms, under three years old, are free. Children from three to seven, with a ticket through to France, or to any station on the Rhenish railway, pay half fare. In the other international services they are not admitted except on payment of full fares.

Dogs are carried in the luggage van, and are charged third-class fare.

Baggage.—The baggage offices are closed three minutes before the departure of the trains; thus baggage ought to be taken to the offices a quarter of an hour at least before starting time. Passengers may insure baggage at the rate of 0·10 per 100 fr.

Travellers are particularly recommended to take off or erase, in black, former labels from their luggage, and only to leave their address, which should be very legible. Travellers may only retain with them articles weighing less than 25 kilos. (50 lbs.), and which can be placed under the seats without incommoding other travellers. Travellers from or to France have a right to 25 kilos. of luggage without charge. Children's tickets entitle the holder to the same quantity. The railway offices receive in keeping any baggage which may be left with them at the arrival or before the departure of trains. The charge for warehousing is fixed at 5 centimes (½*d.*) per package per day, with a minimum charge of 10 centimes.

Customs.—Parcels or packages intended to pass the frontiers must be deposited, *without any exception*, at the office of departure to be entered and inclosed in the customs' waggons. This applies even to hat boxes, bags, nécessaires, &c. Baggage kept in the carriages up to the frontier station, particularly at Verviers, are there re-inscribed (entered), and forwarded to their destination after the departure of the train by passenger train at an extra charge.

Passports.—Belgians are admitted without passport into Prussia, Austria, England, France, Holland, Sweden, Norway, Denmark, Italy, Spain, Switzerland, into the Duchies of Saxe Weimar, Coburg, and Gotha, of Anhalt Dessau, Cothen, Schleswig, Holstein, Lauenburg, Hesse, Nassau, Frankfurt-on-the-Maine, Bremen, and Hamburg. For the other German countries a passport is necessary, but it need not be viséd.

The examination of passports at the Belgian frontier is abolished.

Travellers belonging to a country into which Belgians may not go without a passport viséd, who wish to sojourn in Belgium, must be provided with a regular document for the purpose.

Merchandise.—The administration of the State railways undertakes, gratis, the delivery at domicile of all parcels of merchandise of 50 kilos., or less weight, at stations where the delivery service by road is organized.

On parcels of greater weight than 50 kilos., and on valuables, the charge for delivery is fixed at 15 centimes per 100 kilos., or fraction indivisible thereof, or per 1,000 francs value.

It is sufficient to apprise the authorities at the station, or the central office verbally, or to put in the post without franking, a form or an unsealed letter, addressed to the station master, stating the number of packages to be fetched away and the precise address (with street and number) of the sender and of the consignee. On every occasion the delivery to the domicile gratuitously must be demanded in writing by the sender.

Delivery at Domicile.—All goods forwarded by tariffs No. 2 (article messagerie), also valuables, are delivered within six hours of arrival, the hours of night not counting.

Letters and Packages in haste are forwarded and delivered at domicile by express immediately after arrival of the train on payment of a charge of 10 centimes (1*d.*) per kilogramme (2 lbs.), with minimum charge of 50 centimes.

Nevertheless, express parcels arriving after nine o'clock at night will not be delivered until the next morning between seven and eight o'clock in summer and between eight and nine o'clock in winter.

The sender may however secure the delivery after nine o'clock at night on writing a request on the way bill or address of the parcels. In this case a supplementary charge of 25 centimes will be made.

Cash and valuables deliverable at domicile by express pay 50 centimes per 1,000 francs, with minimum of 1 franc.

Letters and haste parcels are received at all the stations up to the last moment before the departure of all the trains without exception.

Addresses on the Packages.—Every package, bale, or case to be forwarded by rail must have a mark or an address very legible and detailed, with indication, particularly in large towns, of the street and number of the residence of the consignee.

Auxiliary Offices.—Offices are established in the interior of the following towns: *Brussels*—Rue Duquesnoy, near the market of the Madeleine, Rue des Chartreux, Boulevard de Waterloo, Boulevard de l'Entrepot, Rue de l'Astronomie 24, behind the Observatory, Chaussée de Wavre, Faubourg de Namur, Chaussée de Mons, Faubourg d'Anderlecht. At *Antwerp*—Place Verte. At *Liège*—Place St. Lambert and at the Post Office. At *Ghent*—at the Post Office. At *Mons* and at *Namur*—at the Post Offices. At *Verviers*—Place des Recollets.

At the auxiliary offices small parcels, cash, valuables, documents to be forwarded to any destination, inland or abroad, to which the service of the railway extends, may be left for transmission without extra charge. The auxiliary at the Rue Duquesnoy and at the Rue des Chartreux are open from six o'clock in the morning until eight o'clock in the evening.

The others are only open from seven in the morning until seven in the evening.

Except in Brussels, Rue Duquesnoy, Chaussée de Wavre, Rue de l'Astronomie, and Chaussée de Mons, merchandise by slow train is also received at the auxiliary offices, or collected from the domicile of the sender according to his convenience, at the rate of 15 c. per 100 kilos.

Small Parcels.—All the stations of the State railway are in direct correspondence with Germany, Great Britain, and Ireland, for the forwarding of small parcels and of packages of 100 kilos. and under.

The principal advantages which this service offers to the public, are—

Transmission without intermediary. Punctuality and regularity. Responsibility of the administration in case of loss or damage. Moderate prices. Power to prepay up to destination.

Cash articles.—Funds and valuables are carried at the rate of 25 centimes per indivisible fraction of 100 francs, including all charges. The charge may not be less than 50 centimes for any one parcel.

Cash articles must be enclosed in bags neither torn nor mended; sewn inside and fastened by a string, at the end of which must be a seal in wax. The seal must be impressed with a letter or a well defined and distinct mark. Parcels sealed with the impress of a coin, or with straight, circular, or crossed lines will be refused. The value must be stated on the address and on the way bill of the sender, which moreover must be sealed with the same seal as that on the parcel.

Public Laws concerning the Transport of Passengers.

Law of the 12th April 1851.

Leopold, King of the Belgians.

To all present and coming greeting.

The Chambers have adopted and we sanction what follows:

Article 1.—From and after the first day of the second month following the date of the publication of the present law, and until ulterior legislative disposition, the rates of freight and passage for travellers and merchandise on the railways of the State shall be fixed on the basis herein-after stated.

Article 2.—The lengths of line to which the tarification will be applied will be calculated according to a table to be fixed by royal decree, a kilometre being considered a unit of distance. In the compilation of this table every fraction of kilometre will be counted as an entire kilometre.

Article 3.—The classes of carriage designed for the conveyance of passengers will be three in number, viz.:—

1st class.—Diligence,
2nd class.—Char à bancs,
3rd class.—Waggon.

Still, the trains may, according to the arrangements to be determined on by the Minister of Public Works, not include in every instance all three classes of carriage.

Article 4.—The prices of these three classes will be established in the proportion respectively of numbers 4, 3, and 2.

The rate of fares by waggon is fixed for ordinary travellers at four centimes per kilometre, a price which will be applied to the distances in accordance with the stipulations of Articles 2 and 3, and with the reservations mentioned in Articles 5 and 6.

Article 5.—The unit of price for travellers' fares is fixed at five centimes, every fraction of this unit equal to three centimes will count for a unit, and every smaller fraction will be passed over.

Article 6.—The minimum fares will be for the 1st class, 80 centimes; for the 2nd class, 30 centimes; and for the 3rd class, 20 centimes.

Article 7.—No one may travel gratuitously on the railways of the State.

Functionaries or public servants travelling on service of the railway, and customs officers accompanying merchandise, will be exempt from payment of fare.

The manner and conditions of this gratuitous transport will be determined by royal decree.

Article 8.—Functionaries or servants of Belgian or foreign railways travelling for relations of service with the State railway may also enjoy the stated exemption, on terms of reciprocity. The Government will determine a list of these functionaries.

Article 9.—The following will be admitted to travel by rail at a reduction of 50 per cent. on the ordinary tariff.—

1. Troops travelling in corps or in detachments.
2. Non-commissioned officers and soldiers on active service travelling alone.
3. Prisoners, their guard, and the carriages conveying them.

Article 10.—The Minister of Public Works will have the power to reduce the tariff for passengers down to 50 per cent.—

1. For the carriage of emigrants and their effects.
2. For exceptional cases and on the occasion of solemnities, concourses, fetes, and such occasions as would appear to show an increase of revenue to the railway.

Article 11.—The Minister of Public Works will also have the power to allow special trains at prices to be determined according to circumstances.

Article 12.—The freight on luggage is fixed at six centimes per 100 kilogrammes per kilometre. The charge will be made out on 10 to 10 kilogrammes, not counting any fraction of a decade.

The minimum charge on baggage is fixed at 50 centimes.

Article 13.—It is permissible to travellers to carry gratuitously any article not exceeding 25 kilogrammes in weight which may be placed under the seats of the carriages without inconvenience to the other travellers. These articles will not be entered at the offices, and will be at the risk and peril of the travellers to whom they belong.

Article 14.—After the expiration of a full year of the application of the preceding tariffs the Government will present to the Chambers a report on the results obtained.

We promulgate the present law, and order it to be provided with the seal of the State, and published in the Moniteur.

Given at Lacken, the 12th April 1851.

Leopold.

By the King.
The Minister of Public Works,
Em van Hoorebeke.

The Minister of Justice,
Victor Tesch.

Law of the 10th March 1854.

(*See the Royal Decree of 20th March* 1866.)

Leopold, King of the Belgians.

To all present and to come, greeting:

The Chambers have adopted and we sanction what follows:

Article 1.—The rate of passage for travellers in the trains called express shall be calculated so as to show an addition of 25 per cent. on the prices of the ordinary tariff.

These trains may only be composed of first and second class carriages, or of first-class carriages exclusively.

Article 2.—The fares resulting from the calculation of distances on the basis of Article 1, also the bases fixed by the law of 12th April 1851, may be rounded, according to circumstances, by 10th or fifth of francs.

However, the fares charged for third-class places may not be rounded except by way of reduction, or taking off the fraction.

Article 3.—Children under eight years will be charged half fares, and children under three in arms are exempt from payment.

Article 4.—The dispositions of the law of 12th April 1851 remain in force so far as they are not superseded by the above.

Article 5.—The present law will come in force from the first day of the second month following the date of its publication.

We promulgate the present law, order that it may be provided with the seal of the State, and published in the Moniteur.

Given at Ardenne, 10th March 1854.

Leopold.

By the King.
The Minister of Public Works,
Em van Hoorebeke,

Seen and sealed with the Seal of the State,
the Minister of Justice,
Ch. Faider.

Rules and Regulations.

Travellers.

1. Passengers are not admitted into the carriages unless provided with a ticket.

2. The passenger who may have omitted to provide himself with a ticket, or who is in a different carriage from that indicated, must pay from station to station until arrival at the first station at which tickets are distributed.

The guards of trains may not under any pretext charge the fare of a place without giving in exchange a ticket by way of receipt.

All tickets are collected during the journey or at the destination by servants of the administration.

3. A passenger wishing to change carriages during the journey must take, by way of supplement, for the distance he has still to traverse, a waggon (third class) ticket to pass from a waggon (third class) to a char-a-bancs (second class), or from a char-a-bancs (second class) to a diligence (first class).

He must take a (second class) char-a-bancs ticket to pass from a waggon (third class) to a diligence (first class.)

4. Passengers finding themselves in an express train with a ticket only available for an ordinary train must take, in addition, a third class ticket for their entire journey.

Baggage.

5. Baggage charged for must have attached to it a very legible address, and be very strongly and safely packed.

6. No charge for baggage may be less than 50 centimes.

7. In case of the loss of any baggage registered, it will be made good to the traveller by payment of a sum calculated on the weight of the lost articles, at the rate of six francs per kilo (2*s.* 6*d.* per lb.)

8. Travellers may insure their baggage on payment of a premium of 10 centimes for every 100 francs of declared value (1 per mille) in addition to the tariff.

Baggage forwarded in this manner must be well conditioned and appear perfectly safe to the administration.

9. In case of the loss of an article of which the value has been insured, the administration will pay precisely the amount stated on the ticket.

10. Baggage delivered to the office a quarter of an hour before the departure of the train will leave at the same time as the passenger if paid for according to the tariff.

Baggage taken to the office less than a quarter of an hour before the departure may be refused, or will be forwarded in conformity with Article 12.

11. Packages of merchandise and objects of furniture offered as passengers' baggage will be refused if their weight exceeds 25 kilos, or their volume one-eighth of a cubic metre.

12. Travellers may forward their baggage as merchandise at the prices and conditions of merchandise if they do not require it sent on immediately.

No. 404.

RAILWAY.

(193.)

REGULATIONS for the POLICE of the RAILWAYS (*a*).

10th February 1857.

Leopold King of the Belgians.

To all present and to come, greeting.

In consequence of the law of 12th April 1835 (2), which authorizes the Government to establish regulations for maintaining both the police of railways and for fixing the penalties, in conformity with the law of 6th March 1818, in order to repress any breaches of the arrangements made by virtue of that authorization. In consequence of articles of the law of the law of the 6th March 1818 (2), which holds out for infractions of the kind a fine of 10 to 100 Dutch florins, or imprisonment of from 1 to 14 days, penalties which may be combined;

On the proposal of our Minister of Public Works,

We have decreed, and we decree:

ARTICLE 1. It is prohibited,—

1. To take a seat in the carriages of the railways of the State without a regular ticket.
2. To take a seat in a carriage of a different class from that indicated on the ticket.
3. To enter into or leave a carriage in any other manner than by the door at the same side as the office of the arrival station.
4. To lean out of or leave a carriage *before the train is absolutely stopped.*
5. To smoke in the waiting rooms or in the first and second-class carriages, except in those compartments which are specially reserved for that custom.
6. To take a place with a loaded weapon or with any articles of a character to incommode passengers.
7. To open the windows of a carriage on the wind side, unless with the unanimous consent of all the passengers in the compartment.
8. To enter into baggage or merchandise waggons, or into any carriages to which access is interdicted.

ARTICLE 2. Passengers are desired to obey the injunctions of the railway officials in the observation of the above rules.

ARTICLE 3. Noncompliers are liable to the penalties held out by Article 1. of the law of the 6th March 1818.

Our Minister of Public Works is charged with the execution of the present decree.

Given at Lacken, 10th February 1857.

LEOPOLD.

By the King.

The Minister of Public Works,

A. DUMON.

No. 744.

RAILWAY.

(433.)

MODIFICATION of PASSENGERS' TARIFF.

The Minister of Public Works,—

Seeing the royal decree of 2nd September 1840, authorizing the Minister of Public Works to bring under certain conditions modifications in the tariffs of the State railways:

Seeing the law of 1st July 1865 (Moniteur, No. 188):

Seeing the tariffs actually in force for the transport of passengers on the said railway of the State:

Considering that the same reasons which militated in favour of a reduction on the prices of railway carriage on various descriptions of merchandise also militate in favour of a reduction of the fares of passengers:

Considering that the equality of the kilometrical charge constitutes, actually for passengers as it did for merchandise, an overcharge for great distances, and that it will be fair in consequence to abolish the unfairness of this charge by the new application of the principle of a progressive reduction of the basis of the calculation of charge:

Considering, nevertheless, that to protect the interests of the treasury, which might be jeopardized by the immediate introduction to all the degrees of the scale of distances of the rates reduced to the lowest basis contemplated, it is important to proceed by successive application of these rates:

Considering that it would appear equally advantageous to the treasury as to the public that third-class carriages be adjoined to express trains, at least on all occasions when it may be done without hindrance to the celerity and the regularity of the service:

Seeing the ministerial decree of 9th December 1865, which reduced to 50 and 40 centimes the minima of charges for first-class travellers of respectively express and ordinary trains:

Seeing the proposals of the administration of the railways of the State:

It is ordered,—

ARTICLE 1. The present bases of the passengers' tariff, fixed respectively at 8, 6, and 4 centimes per kilometre for the 1st, 2nd, and 3rd class of ordinary trains, with the addition of 25 per cent. for the 1st and 2nd class of express trains, are altered for the following bases:—

The reckoning by league of five kilometres shall be substituted for the reckoning by kilometre, and the distances applied to the tariff on merchandise shall be adapted to that of passengers' fares.

The fares in the three classes by ordinary trains are established as follows:—

1. From 1 to 10 leagues, inclusive, there will be charged for each league—
   1st class, 0·30 francs.
   2nd „ 0·20 „
   3rd „ 0·15 „
2. From 11 to 20 leagues there will be added to the fare on the 10th league, and for every league—
   1st class, 0·15 francs.
   2nd „ 0·10 „
   3rd „ 0·07½ „
3. Beyond 20 leagues there will be added to the fare on the 20th league, and for every league—
   1st class, 0·10 francs.
   2nd „ 0·07½ „
   3rd „ 0·05 „

Third-class carriages will be added to the express trains, to be specified.

The surcharge on express trains will be reduced from 25 to 20 per cent. on the above prices.

The unity of price being fixed at 5 centimes, every fraction of less than 3 centimes will fall away, and every fraction of 3 centimes and above will be counted as 5.

Conformably with the preceding bases, the annexed Table No. 1 establishes the fares for the various distances.

ARTICLE 2.—By first application of these bases, the prices reduced as above will be introduced at their definitive figure, commencing at the 16th league.

A temporary rate will be applied to the zone embraced between the 8th and the 15th leagues, inclusive.

The completion of the reduction in this zone, as also the application of the prices reduced above in the zone embraced between 1 and 7 leagues, remain reserved.

In consequence the Table No. 2 is approved to be placed in force provisionally.

ARTICLE 3.—The reduced tariff applicable to the carriage of electors is fixed from this date at 50 per cent. of the definitive fares indicated in the supplement No. 1.

Troops travelling in corps or in detachments,
Societies,
Children of less than 8 years of age,
Emigrants,
Prisoners and their guard,

will enjoy a reduction of 25 per cent. on the same prices.

ARTICLE 4.—The present tariff for the carriage of baggage is provisionally maintained.

ARTICLE 5.—The foregoing arrangements will be applied to mixed services, which borrow the lines of the State and those of Belgian companies which may have consented

thereto, and, in cases of non-consent to the portion of the mixed journeys only extending to the lines of the State.

They will be extended to international lines, to be determined and arranged hereafter.

Article 6.—The arrangements not affected by the present decree remain in force.

Article 7.—The preceding measures will be put in force from the 1st May 1866.

Jules Vanderstichelen.

Brussels, March 20, 1866.

Approved to be annexed to our decree of this date.

Brussels, 20th March 1866.

The Minister of Public Works,

Jules Vanderstichelen.

No. 92.

Modifications in the Passenger Tariff—Fourth Direction.

Order of Service.—First Supplement.

The 22nd April 1866.

The ministerial decree of 20th March ultimo, R. No. 744, importing modifications in the passengers' tariff, is to be put in force on the 1st of May next.

I particularly call the attention of station masters to the following arrangement:—

1st. The actual fares for journeys of 35 kilometres and less are for the present not to undergo any alteration.

Beyond 35 kilometres the fares are established by leagues.

2nd. Third-class carriages will be added to those express trains to be enumerated.

Express third-class tickets will be printed on grey cards.

3rd. Passengers' fares will be fixed for distances beyond 35 kilometres by the legal distances indicated in the goods tariff, of which a new edition will be published before the 1st May.

4th. In consequence of the decision to that effect of the minister, the distances have been fixed in this new edition as though the line from Brussels to Louvain were already open for traffic. The distance between these two stations has in consequence been reduced to 30 kilometres (six leagues).

Similar reductions have also been made—

a. Between Brussels and the places beyond Louvain.
b. Between Louvain and the places beyond Brussels.
c. Between the places, the traffic of which will in future pass in transit on the line from Brussels to Louvain.

A great number of distances between stations on other lines having also been rectified, on and after the 1st of May the old editions may no longer be used of the tariff of goods in the internal service of the State.

5th. Every station will receive from the central administration, 4th direction, a table indicating the passenger fares to all the destinations to which direct through tickets may be issued.

The actual prices retained are inscribed in black ink on this table, the altered ones in red ink.

It will thus be easy to find out by inspection of this table for which stations the fares on the tickets must be corrected.

The chefs of the station must proceed *at once* to the verification of the table in question.

They will thus satisfy themselves that the fares in black ink are really the actual ones on the tariff, and the fares in red ink correspond with the provisional table, supplement II. of the decree of 20th March, applied according to the distances indicated in the new freight tariff.

They will perceive that, from the break of continuity at Brussels, this tariff cannot give them applicable distances when for the transport of goods the direction is by the stations of the north and the south at Brussels.

For instance:—

From Brussels North to Ath.

The direction is by Brussels—south—Enghien, and the distance is 11 leagues for freight.

The direction is by Denderleeuw, and the distance is 13 leagues for passengers.

In case of specie, the applicable distances must be verified by adding together the distance in metres from the arrival station and the departure station to an intermediate station on the route.

In the conversion in leagues of the distance in metres thus arrived at, fractions of 100 metres will count for 100 metres.

Example:—

From Brussels Nord to Ath.

Brussels to Denderleeuw	-	23,905 m.
Denderleeuw to Ath	- -	39,587 „
Total	-	63,492 m.

or 63,500 metres=13 leagues.

7. After verification of the table tariff of passengers in the manner indicated above the chiefs of stations will order the number of copies necessary to give one to each ticket clerk, and also one to be fixed at each ticket window for the information of the public.

The printed forms necessary for this purpose will be sent them in due time.

The minute of the table tariff must be returned in the shortest possible time to the 4th direction to serve in printing the general tariff.

Every error discovered should be marked urgent.

8. The old regulations respecting the validity of the same tickets for two directions remain in force.

Therefore in this respect the order of service, No. 182 of 1862, and the special order, No. 188 of the 10th July 1862, will be adhered to.

Passengers leaving stations on the one hand between Mons and Quiévrain, and between Ecaussines and Namur on the other, and *vice versâ*, may equally continue to take the road by Braine or by La Louvière.

9. For the above cases not provided for tickets may be issued by the longer route at the price of the shorter route when the difference of distance between the two routes does dot exceed two leagues.

Example,
From Courtray to Ninove,
By Ghent, is 17 leagues.
By Tournay and Ath, is 19 leagues.

Passengers may go from Courtray to Ninove by either of the two routes at the fare of the shorter, 17 leagues.

In case the difference of distance is more than two leagues, and the passenger requires a ticket by the longer route, a special ticket must be given him calculating the price by this distance.

Example,
From Courtray to Ath.
By Tournay, 13 leagues.

By Ghent,	Courtray to Denderleeuw	77,123 m.
	Denderleeuw to Ath	- 39,587 „
		116,710

or 23 leagues.

The passenger desiring to go from Courtray to Ath by Denderleeuw must pay his fare calculated on the distance of 23 leagues.

NOTE.—It is well understood that such demands must only be complied with when it is in the interest of the passenger to take the longer route by reason of the time of departure or of the coincidence of trains.

The prices thus composed are stated in the tariff for the principal connexions.

If a traveller has to effect his journey partly by express and partly by ordinary train an express ticket must be given him for the whole distance.

10. Children of less than eight years old, soldiers, and civic guards travelling in corps or in detachment, societies travelling in corps, will in future enjoy a reduction of 25 per cent. on the fares of the definitive table, Supplement No. I. to the decree of 20th March.

The table annexed to the present order gives the prices applicable to transports reduced by 25 per cent.

This table will be in force from 1st May, even for distances of less than 35 kilometres according to the distances in leagues of the new goods tariff, and in the manner sketched out in Articles 6 and 9 of the present order in case the passenger take another than the direct route.

In order to avoid searches at the time of distribution of tickets at reduced rates it is recommended to those whom it concerns to inscribe on the back of the lid of each box of tickets the prices to be charged for the cases in question.

The former reductions on the fares of travellers hereinafter stated are abrogated:

Officers, petty officers, and soldiers travelling alone.
Officers, petty officers, and sailors of the royal navy.
Officers of the staff of the civic guard.
Gendarmes travelling on military service.
Conductors of artillery, hospital servants, and servants of military bakeries.
Nuns and priests of all denominations.
Dramatic artists, circus entrepreneurs, and open theatres travelling in parties of less than 20.

(*Note.*)—When there are 20 persons or more, these travellers are considered as societies travelling in corps.

And, generally, travellers of every description who have not an authorization of subsequent date to that of this order.

All these travellers will pay, on and after the 1st of May, the ordinary tariff fares.

No alteration is made in the conditions for carrying the baggage, horses, and furniture of officers, or the horses and materials of managers of circuses and itinerary theatres.

These transports will continue subject to the instructions actually in force.

Prisoners and their guard will also continue to be carried according to the subscribed conditions agreed between the departments of justice and of public works.

11. Electors only, provided with their ticket of convocation, will be entitled to a reduction of 50 per cent. on the fares of the definitive table.

12. Nothing is changed in the arrangements of account in force for transport at reduced prices.

13. Seeing the impossibility of immediately replacing all the tickets in stock for journeys of 35 kilometres, the prices indicated on the tickets will be altered by hand.

Nevertheless, the station masters will receive a first supply of tickets with the new fares for the most important relations.

The 4th direction will advise them of the orders which have been given.

The bureaux will address to the Conservation du timbre (Stamp office?) orders of urgency for the other destinations.

In the meantime, and to facilitate beforehand the correction by hand of the prices, the station masters are authorized to cancel, according to circumstances, the hundreds or series of tickets not used at the date of the 30th of April instant.

As the offices shall have received the tickets bearing the new prices, they will return to the central administration, 6th direction, the tickets put out of use, accompanied with an inventory in duplicate stating the numbers commencing and finishing the cancelled tickets.

The cancelled tickets will moreover be ascertained at the monthly return of passengers.

14. The reductions granted until now on return tickets, for distances of 35 kilometres and under, are maintained.

15. Travellers having an interest in (ne pas scinder les parcours)? not dividing their journey? it is expressly recommended to give them direct tickets to their final destination, insomuch as they may arrive there by trains leaving on the same day, and composed with carriages of the class indicated on the ticket.

In fault of ordinary tickets special tickets will be delivered.

16. Travellers having to cross Brussels from the station of the North to that of the South, and *vice versâ*, will not receive in any case tickets further than Brussels.

17. The decisions of concessionary companies in what concerns mixed traffic will immediately be made known. The tables of fares to be charged for the said journeys will also be sent to the stations interested.

18. No modification is introduced in the tariff prices of international services.

19. The existing tariff of baggage is maintained as it was.

20. The tables of division in the mixed travellers' tariff, also those indicating the portions due to the concession companies, of which the lines are used by the administration of the railways of the State, will ultimately be published.

I count on the devoted assistance of the chiefs of service and of the stations to ensure the good carrying out of the measures decreed by the minister.

Any complaints of the public, or any difficulty which might accrue in the application of these measures, will immediately be submitted to me.

The Director-General.
FASSIAUX.

TABLE of Passenger Fares, with a reduction of 25 per cent. on the definitive prices.

Distance in Leagues.	Express.			Ordinary.

NOTE.—These fares apply to the legal distances indicated in the merchandise tariff.

APPENDIX CV.

LIST of ARBITRATIONS between the POST OFFICE and RAILWAY COMPANIES, showing the date of each Award, the name of the Arbitrators for the Post Office and the Railway Company respectively, and the name of the Umpire, if an Umpire has been appealed to:—

Date of Award.	Name of Railway Company.	Name of Arbitrator on the part of the Post Office.	Name of Arbitrator on the part of the Railway Company.	Name of Umpire (if any).	By whom the award was given.
Jan. 17, 1839	Grand Junction Railway	Lieut. Harness	Mr. Joseph Locke	- - - - - -	Arbitrators.
Mar. 22, „	North Union Railway	Lieut. Harness	Mr. C. Vignoles, C.E.	- - - - - -	Arbitrators.
April 6, „	London and Birmingham	Lieut. Harness	Mr. Larpent	Hon. T. F. Lewis	Umpire.
Dec. 4, 1840	Lancaster and Preston	Lieut. Harness	Mr. Joseph Locke	- - - - - -	Arbitrators.
May 4, 1841	Midland Counties	Lieut. Harness	Mr. C. Vignoles, C.E.	Lieut. Col. H. Jones, R.E.	Umpire.
June 2, „	Hull and Selby	Lieut. Harness	Mr. Locking	Professor Peter Barlow	Umpire.
	Birmingham and Derby	Lieut. Harness	Mr. Stephenson	Sir J. Burgoyne	Umpire.
Aug. 20, „	Manchester and Leeds	Lieut. Harness	Mr. J. Laws	- - - - - -	Arbitrators.
Sept. 11, „	Lancaster and Preston	Lieut. Harness	Mr. J. Locke	- - - - - -	Arbitrators.
Nov. 5, „	Birmingham and Gloucester	Lieut. Harness	Mr. J. Ellis	Sir E. Wilmot	Umpire.
Nov. 23, „	York and North Midland	Lieut. Harness	Mr Robert Stephenson	- - - - - -	Arbitrators.
Nov. 30, „	Grand Junction Railway (Chester and Crewe Services).	Lieut. Harness	Mr. J. Locke	Mr. Wilson Patten	Umpire.
Dec. 11, „	Great North of England	Lieut. Harness	Mr. R. Stephenson, C.E.	- - - - - -	Arbitrators.
Dec. 11, „	York and North Midland	Lieut. Harness	Mr. R. Stephenson, C.E.	- - - - - -	Arbitrators.

Date of Award.	Name of Railway Company.	Name of Arbitrator on the part of the Post Office.	Name of Arbitrator on the part of the Railway Company.	Name of Umpire (if any).	By whom the Award was given.
Feb. 9, 1842	North Midland	Lieut. Harness	Mr. R. Stephenson	Sir F. Smith, Lieut.-Col. R.E.	Umpire.
Feb. 19, „	North Union	Lieut. Harness	Mr. J. Chapman	Mr. D. Maude	Umpire.
Mar. 10, „	Midland Counties (Nottingham and Derby).	Lieut. Harness	Mr. J. Ellis	- - - - - -	Arbitrators.
Mar. 29, „	Glasgow and Ayr	Lieut. Harness	Mr. J. Miller	Mr. J. Wilson Patten	Umpire.
July 28, „	Newcastle and Carlisle	Lieut. Harness	Mr. Blackmore	Mr. Peter Barlow	Umpire.
Aug. 15, „	Edinburgh and Glasgow	Lieut. Harness	Mr. J. Miller	Mr. Cain Kilburn	Umpire.
Aug. 20, „	Hull and Selby	Lieut. Harness	Mr. Locking	Hon. Charles Langdale	Umpire.
Nov. 7, „	Dundee and Arbroath	Lieut. Harness	Mr. Leslie	Mr. T. Henderson	Umpire.
Jan. 16, 1843	Chester and Birkenhead	Lieut. Harness	Mr. R. Stephenson	Sir F. Smith	Umpire.
Mar. 26, „	London and South-western	Lieut. Harness	Mr. J. Locke	Mr. Wilson Patten	Umpire.
May 5, „	Glasgow and Ayr	Lieut. Harness	Mr. J. Miller	Mr. W. Gibson Craig	Umpire.
June 26, „	Edinburgh and Glasgow	Lieut. Harness	Mr. J. Miller	- - - - - -	Arbitrators.
July 4, „	Manchester and Leeds	Lieut. Harness	Mr. J. Laws	- - - - - -	Arbitrators.
July 10, „	Glasgow and Greenock	Lieut. Harness	Mr. J. E. Errington	- - - - - -	Arbitrators.
Oct. 24, „	Hull and Selby	Lieut. Harness	Mr. Locking	Mr. Bethell	Umpire.
Dec. 6, „	York and North Midland	Lieut. Harness	Mr. G. Hudson	Mr. J. Stuart Wortley	Umpire.
Mar. 23, 1844	Eastern Counties	Capt. Harness	Mr. R. Hall	- - - - - -	Arbitrators.
Sept. 17, „	Birmingham and Gloucester	Capt. Harness	Mr. J. Ellis	- - - - - -	Arbitrators.
May 7, 1845	Great Western	Mr. Maude	Mr. Brunel	Mr. G. C. Lewis	Umpire.
May 21, „	Bristol and Gloucester	Capt. Harness	Mr. W. Barlow	Mr. Wilson Patten	Umpire.
May 21, „	Norfolk	Capt. Harness	Mr. G. Bidder	Mr. Wilson Patten	Umpire.
July 26, „	Glasgow and Paisley	Capt. Harness	Mr. J. E. Errington	Mr. H. J. Robertson	Umpire.
Aug. 7, „	Edinburgh and Northern (Granton Pier and Burntisland Ferry).	Capt. Harness	Mr. Hamilton	Mr. Wilson Patten	Umpire.
Nov. 2, 1847	North Western (Blisworth and Peterboro').	Capt. Williams	Mr. G. P. Bidder	- - - - - -	Arbitrators.
Dec. 9, „	Midland	Capt. Williams	Mr. W. Barlow	Mr. Wilson Patten	Umpire.
Feb. 2, 1848	North British	Capt. Williams	Mr. Miller	The Hon. Mr. F. Scott	Umpire.
Mar. 2, „	Lancaster and Carlisle	Capt. Williams	Mr. J. Locke, M.P.	Sir J. Yarde Buller	Umpire.
Mar. 16, „	Londonderry and Enniskillen (Derry and Strabane Dublin Mail Service).	Capt. Williams	Mr. Hemming	Mr. J. Wilson Patten	Umpire.
May 15, „	Great Southern and Western	Capt. Williams	Mr. W. Harding	Mr. H. Martley	Umpire.
June 11, „	Edinburgh and Northern (Granton Pier and Burntisland Ferry).	Capt. Williams	Mr. R. W. Hamilton	Mr. Wilson Patten	Umpire.
June 20, „	Great Western	Capt. Williams	Mr. C. Saunders	Sir W. Molesworth, Bart.	Umpire.
July 1, „	Carlisle, Maryport, and Whitehaven	Capt. Williams	Mr. G. Bidder	Mr. Wilson Patten, M.P.	Umpire.
Aug. 25, „	Lancaster and Carlisle (Lancaster and Preston).	Capt. Williams	Mr. J. Locke	- - - - - -	Arbitrators.
Sept. 19, „	Lancashire and Yorkshire	Capt. Williams	Mr. Hawkshaw	- - - - - -	Arbitrators.
Oct. 9, „	Midland (Lessees of Leeds, Bradford, and Skipton Line).	Capt. Williams	Mr. W. H. Barlow	- - - - - -	Arbitrators.
Nov. 18, „	Dundee and Perth	Capt. Williams	Mr. J. Locke, M.P.	Mr. Wilson Patten	Umpire.
Dec. 4, „	Newcastle and Berwick	Capt. Williams	Mr. Bidder	- - - - - -	Arbitrators.
Dec. 6, „	London and South Western	Capt. Williams	Mr. Locke	- - - - - -	Arbitrators.
Dec. 27, „	Dublin and Drogheda	Capt. Williams	Mr. Wyndham Harding	Right Hon. F. Shaw	Umpire.
Feb. 8, 1849	Midland Great Western	Capt. Williams	Mr. Wyndham Harding	Right Hon. F. Shaw	Umpire.
Feb. 14, „	Caledonian	Capt. Williams	Mr. Locke	- - - - - -	Arbitrators.
Mar. 13, „	Gateshead, Newcastle, and Berwick	Capt. Williams	Mr. G. Bidder	- - - - - -	Arbitrators.
Apr. 26, „	Scottish Central	Capt. Williams	Mr. Locke, M.P.	Mr. Wilson Patten, M.P.	Umpire.
June 11, „	Great Northern	Capt. Williams	Mr. E. Bury	- - - - - -	Arbitrators.
Aug. 25, „	Chester and Birkenhead	Capt. Williams	Mr. F. Webster	Mr. Wilson Patten	Umpire.
Sept. 5, „	Eastern Counties (Ely and Peterborough Service).	Capt. Williams	Mr. G. P. Bidder, C.E.	- - - - - -	Arbitrators.
Oct. 5, „	Edinburgh and Glasgow	Capt. Williams	Mr. J. Monerieff Melville	Mr. Wilson Patten	Umpire.
Dec. 11, „	South Devon	Capt. Williams	Mr. I. K. Brunel, C.E.	Rt. Hon. J. Nicholl, LL.D., M.P.	Umpire.
Dec. 24, „	Great Southern and Western	Capt. Williams	Mr. Wyndham Harding	Mr. Jonathan Henn, Q.C.	Umpire.
Feb. 2, 1850	East Lancashire	Capt. Williams	Mr. J. E. Errington	Mr. Wilson Patten, M.P.	Umpire.
Mar. 5, „	Dundee and Arbroath (to Dundee, Perth, and Aberdeen Railway Junction Company).	Capt. Williams	Mr. John Shiell	Mr. Wilson Patten, M.P.	Umpire.
April 6, „	North Union	Capt. Williams	Capt. Huish	Lord Wrottesley	Umpire.
April 19, „	Belfast and Ballymena	Capt. Williams	Mr. John Godwin	Right Hon. F. Shaw	Umpire.
June 17, „	Dublin and Belfast Junction	Capt. Williams	Mr. Mounteforte Longfield, LL.D.	Mr. Jonathan Henn, Q.C.	Umpire.
Aug. 3, „	Shropshire Union	Capt. Williams	Mr. G. P. Bidder	- - - - - -	Arbitrators.
Aug. 14, „	Waterford and Limerick	Capt. Williams	Mr. Wyndham Harding	Mr. Jonathan Henn, Q.C.	Umpire.
Aug. 24, „	Aberdeen	Capt. Williams	Mr. Joseph Locke	- - - - - -	Arbitrators.
Oct. 9, „	Edinburgh, Perth, and Aberdeen	Capt. Williams	Mr. Grainger	Mr. R. Marshall	Umpire.
Oct. 24, „	Lancaster and Carlisle	Capt. Williams	Capt. Huish	Sir J. E. Graham, Bart., M.P.	Umpire.
Nov. 1, „	Maryport and Carlisle	Capt. Williams	Mr. George Cowen	Mr. H. A. Aglionby	Umpire.
Nov. 6, „	Belfast and Ballymena	Capt. Williams	Mr. John Godwin, C.E.	Right Hon. F. Shaw	Umpire.
Nov. 26, „	South-eastern Railway	Capt. Williams	Mr. W. Quilter	- - - - - -	Arbitrators.
Jan. 6, 1851	Ulster	Capt. Williams	Mr. J. W. Murland	- - - - - -	Arbitrators
	Dundalk and Enniskillen	Capt. Williams	Mr. G. W. Hemans, C.E.	Sir J. Young, Bart., M.P.	Umpire.
Jan. 30, „	Londonderry and Enniskillen	Capt. Williams	Mr. J. Godwin	Mr. S. Wensley Blackall, M.P.	Umpire.
Feb. 21, „	Whitehaven Junction	Capt. Williams	Mr. James McGregor	- - - - - -	Arbitrators.
May 20, „	Maryport and Carlisle	Capt. Williams	Mr. George Cowen	- - - - - -	Arbitrators.

Appendix CW.

Remarks by the Inspector-General of Mails on certain portions of Mr. Allport's Evidence affecting the Postal Service.

Extract from Mr. Allport's Evidence.

The following is the extract of evidence alluded to:—

I wish to make a few remarks on Mr. Frederic Hill's evidence about the Post Office. The effect of Mr. Hill's evidence is to show that if the Government were to take the railways, it would, amongst other things, do away with the difficulty they have in dealing with railways for postal purposes. That is the only point I shall allude to. He alludes to the difficulties of getting arbitrations. Perhaps, in the early history of railways, arbitrations were not so convenient, and not so satisfactory as they might have been; but I think for many years past, with all the larger companies, the Post Office has not had arbitrations to deal with. I do not remember one now for many years certainly with the Midland; and I will say with the North-western, and most of the large companies, it is all done by agreement, and so far from any difficulty being thrown in the way of the Post Office, I believe that we are only too anxious to meet the requirements of the Post Office in every possible way. Speaking on behalf of the Midland, I may state that the payments of the Midland Company are now 44,600*l.* a year, for which we run with trains under notice, that is, the Post Office fixing the times, 537,160 miles per annum; but, in addition to that they have the use of every train upon the Midland railway, goods, minerals, and passengers, to send bags wherever they please. The trains used by the Post Office have a mileage of 1,504,828 miles.

Remarks by the Inspector-General of Mails.

Mr. Allport's object appears to be to show by these figures that the Midland Railway Company were so anxious to settle the payment for mail service by agreement, that when negotiating the last contract, he consented to accept about 8,000*l.* less than the service was actually worth. In order to establish his position he appears to me to have stated the case with much unfairness. The following are the actual facts of the case:—The total payment under the former contract was 35,000*l.* per annum. Under the contract last negotiated the payment was raised to 44,000*l.* per annum. Of this last-named sum 5,000*l.* per annum was, with Mr. Allport's entire concurrence, specially set apart as representing the value of the ordinary train service, the remainder, or 39,000*l.* a year, being allotted to the service performed under legal notice. If the 5,000*l.* set apart for the ordinary train service be reduced to a mileage rate it would give (the number of miles over which mails were conveyed by ordinary trains being estimated at 1,600,000) a rate of $\frac{3}{4}d.$ a mile, whereas Mr. Allport takes the rate for such services at 2*d.* a mile. The difference between these two rates represents a sum of 8,300*l.*, which is near about the sum which Mr. Allport states the company are underpaid.

The number of miles traversed by mail trains under fixed notice is about 452,947 per annum, which gives an average rate of 1*s.* $8\frac{1}{2}d.$, being $2\frac{1}{2}d.$ a mile more than the

Extract from Mr. Allport's Evidence.

We run upwards of 2,000,000 of miles for the sum of 44,600*l.* I have divided that 44,600*l.* between the trains under notice and the ordinary trains. I should say, that the bulk of the trains under notice run during the night. We have very few mail trains running at convenient times for passengers. I find the average of the mail trains will be, including the Post Office payments, about 9*d.* per mile less than the ordinary average of our trains, so that our trains yielding 3*s.* 11*d.*, the mail trains will average about 3*s.* 2*d.*, and that including the postal payment. At 1*s.* 6*d.* per mile that would yield us 40,000*l.*, and taking the ordinary trains at 2*d.* per mile would give us 12,000*l.*, or would be 8,000*l.* more than the Post Office now pay us; but I take 2*s.* per mile, and certainly for a train only yielding 3*s.* 2*d.*, including the Post Office payments, 2*s.* is by no means an extravagant sum to charge for the service, it would then give 66,256*l.* instead of a payment of 44,600*l.*

16,944. (*Lord Stanley.*) Were those terms settled by the Midland by arbitration?—No; we settled them by arrangement; I fixed the terms myself.

16,945. Have you ever had an arbitration with the Post Office?—Not for many years past, not since I rejoined the Midland in 1852, we have had no arbitration whatever with the Post Office.

16,946. (*Capt. Galton.*) The average you receive would appear to be 5*d.* per mile, taking one train with another?—Yes; but it would not be fair to give the same by ordinary passenger and goods trains as well. For instance, we have a train starting to Leeds about two o'clock in the morning, and then one leaves Derby at five o'clock in the morning; it is perfectly clear that nobody will get up to go by that train, and the train frequently runs without passengers.

16,947. I was not intending to imply that you could have a uniform rate for every train, but I was only wishing to point out that you now only do charge on the average of your own trains 5*d.* per mile?—That is so.

16,948. And therefore you run lower than what Mr. Hill suggested should be the average?—I have taken another mode of testing this to show that the Post Office is really, as far as we are concerned, treated better than the public. I set some of our inspectors to ascertain the number of bags which are sent.

16,949. (*Mr. Glyn.*) Have you got the weight?—We could not ascertain the weight.

16,950. You do not weigh them when starting?—No; we never weigh mail bags. I find we are carrying as nearly as possible 700,000 bags a year; that divided by the money gives about 1*s.* 3*d.* per bag, without reference to distance. If a bag is carried from London to Lancaster, or from Leeds to Bristol, it would come to 1*s.* 3*d.* per bag; so that I do not think the postal service is dear. I have every reason to believe this is not a solitary case. I have no doubt that the rates of many of the larger companies are very nearly as low as ourselves.

16,951. (*Chairman.*) Do you think that packages about the same size carried for the public would be charged on the average more than what you receive from the Post Office?—I have no doubt of that, because although some of the bags are small and, perhaps, do not contain more than 200 or 300 letters, others are large sacks, as much as a man can carry on his shoulders. We have had them counted simply as bags. Some of them would contain, perhaps, several thousand letters, and still it only comes to 1*s.* 3*d.*

What the railway companies complain of on the part of the Post Office is, gradually trying to absorb the parcel traffic. The complaints of the public about the deliveries of the post are groundless, because if they like they can have as many deliveries a day as there are trains running. Taking the great bulk of the country districts, there is not more than one delivery per day.

In many of the large towns there is only one delivery per day but the Post Office have the power, if they please to exercise it, of sending bags as many times per day as we have trains running between any two places. So that it is entirely their own laches if they do not have as many deliveries as there are trains.

Remarks by the Inspector-General of Mails.

rate first referred to by Mr. Allport, a rate which I scarcely think he would have adopted at all had he considered it a low rate, although, in order to strengthen his case still further, he afterwards adopts 2*s.* as the rate for such service.

The last arbitration with the Midland Railway Company was in July 1858. Mr. Allport appears to have entirely overlooked this.

I cannot find in Mr. Hill's evidence any suggestion whatever as to what would constitute a fair average.

This is a mere arbitrary statement, and one in which I certainly do not concur. A very large number of mail bags contain as few as from 30 to 50 letters, and the number of bags carried over short distances (say under 50 miles) very largely exceeds the number carried over that distance. I cannot believe that even at the full rate of charge made to the public at large for single parcels the average charge would amount to anything like so much as 1*s.* 3*d.* per bag. But even supposing that it were so, it is obvious that that charge is greatly in excess of what it ought to be, because, in the first place the companies are relieved from the cost of collection and delivery of mail bags, a cost which is unquestionably the chief expense incurred by the companies in respect to ordinary parcels; and in the second place, the extent and regularity of the mail bag service would undoubtedly, in the case of an ordinary customer, be a sufficient inducement to the railway company to undertake the conveyance on terms very much below the rates offered to the public for single parcels.

This ground of complaint is fully dealt with in my evidence before the Royal Commission.

This is not correct. There are, I believe, very few large towns which have not more than one delivery.

(Signed) E. P.

May 31, 1866.

MEMORIAL.

To the Right Honourable the Lords Commissioners of Her Majesty's Treasury.

The respectful Memorial of the undersigned Irish Railway Companies showeth,—

THAT memorialists, as representatives of a large Irish industrial interest, come before your Lordships.

That memorialists venture to affirm that which will not be denied, that the material prosperity, and consequent peace and happiness of their country, must be based upon reproductive industry as a chief means.

That industrial resources cannot be developed to their fullest extent without that facile and cheap means of transit from place to place to be afforded only by railways *utilised thoroughly*; and therefore that railway communication ought to be encouraged and developed.

That many railways have been constructed with great advantages to the country, but under circumstances of such difficulty, especially in procuring capital (caused by the exceptional condition of this country), as to have left your memorialists without an adequate return on their capital, and subject to engagements bearing exorbitant interest, thus hampering their efforts to extend those advantages.

That your memorialists therefore trust your Lordships will consider their present position as justly deserving of consideration on the part of the Government.

That memorialists are convinced the aid of the State can be given without imposing any burthen on the public.

That the purposes to which State assistance could be most usefully and most easily applied would be—

1st. To relieve companies from the heavy incubus on their resources caused by *exorbitant interest* on bonds, mortgages, preferential or guaranteed shares, and floating debts, which they have been obliged to incur to complete their undertakings (which debts, in many instances, and to a large extent, rest on the personal guarantees of individual directors who have come forward and pledged their private credit for the purpose), in consequence of the impossibility, from the difficult circumstances in which the country is placed, of issuing their shares or securities, unless at a ruinous sacrifice. This relief could be obtained by a Public General Act, empowering the Government to lend, and the companies to borrow, at a reasonable rate of interest, a sum sufficient to pay off the existing liabilities of companies.

2nd. To enable companies, by Government loans, on the same principle, to complete their now authorized, but unfinished, undertakings.

That in return for the boon thus asked, and in order to establish a perfect identity of interests and reciprocity of benefits between the country and the railways, without which neither can prosper, your memorialists are not only willing, but anxious, that their lines of railway shall be utilised for the accommodation of the public by reduced fares and increased facilities.

May it therefore please your Lordships to grant that the administrative and legislative measures necessary to realize the views of your memorialists may be initiated and carried out under the auspices of your Lordships.

And your memorialists will ever pray.

COMMITTEE having CHARGE of MEMORIAL appointed for that purpose by the Conference of Irish Railway Directors held on 26th January 1866.

CHAIRMAN of CONFERENCE, and also of COMMITTEE:

The Most Honourable the MARQUIS OF CLANRICARDE, Chairman of the Parsonstown and Portumna Bridge Railway Company.

Committee.

INTEREST ON FLOATING DEBT.

Its apportionment cannot be analysed, as the amount of neither the principal nor interest is published, but that information, as well as several other necessary details, could be obtained from the companies, if required by Government or Parliament.

The interest on floating debt, however, is beyond all question (in proportion to the amount of the debt) much the heaviest incumbrance on the resources of the companies.

DIVIDEND ON PREFERENCE SHARES was thus apportioned.

THOMAS NAAN, Secretary to Irish Railway Directors' Conference.

Limerick, 27th April 1866.

APPENDIX CY.

ADDENDUM TO MR. LOW'S EVIDENCE.

SIR, Bristol, 19th June 1866.

I AM directed by the Committee of this Chamber, with reference to the evidence given by Mr. Charles Hoskins Low before the Royal Commissioners on Railways on the 1st of March last, to forward to you the enclosed copies of letters from Mr. J. Hearne, the goods manager of the Great Western Railway Company at Bristol, and of the reply of the Committee thereto, with a request that you will be pleased to lay the same before the Commissioners at their next meeting. I am, &c.

LEONARD BRUTON,
Secretary.

William Pole, Esq.,
Secretary to the Royal Commission on Railways,
House of Lords, Westminster.

Great Western Railway, District Goods Manager's Office,
Bristol, June 15, 1866.

Timber and Deal Rates from Bristol and Gloucester and Newport.

DEAR SIR,

WITH reference to my interview with the Chairman and Vice-Chairman of the Bristol Chamber of Commerce on the 7th March last, when they complained of the rates charged from Newport and Gloucester being proportionately lower than those charged from scale, there are some slight discrepancies, but as many in favour of Bristol as Gloucester.

The Newport rates are no doubt based on a lower scale, but they have been in operation a long time, and according to the return above alluded to, are clearly without any prejudicial effect to Bristol.

I trust this explanation will convince the timber merchants of Bristol that they are at no disadvantage with respect to rates, and as regards station accommodation and prompt attention I venture to hope that they have now nothing to complain of. I am, &c.

L. Bruton, Esq.,
Secretary, Bristol Chamber of Commerce.

J. HEARNE.

Bristol Chamber of Commerce,
52, Queen Square, Bristol, 19th June 1866.

Timber and Deal Rates.

DEAR SIR,

I HAD the pleasure of laying your letter of the 15th inst. before the Committee of this Chamber at their meeting to-day. In reply I was desired to say that the Committee regret they cannot consider the explanation by any means satisfactory, and to express their hope that your Company will reduce their rates from Bristol and Gloucester to those of Newport and Cardiff, pro rata according to the mileage. I am, &c.

J. Hearne, Esq.,
Great Western Railway,
Goods Department, Bristol.

LEONARD BRUTON,
Secretary.

APPENDIX CZ.

STATEMENT of BROAD and MIXED GAUGE LINES, of NARROW GAUGE LINES belonging to the GREAT WESTERN RAILWAY COMPANY, and LIST of PLACES where BROAD and MIXED GAUGE LINES meet NARROW GAUGE.

(*See also Map, Appendix* DA.)

June 23rd, 1866.

LIST of PLACES where the BROAD and NARROW GAUGE LINES meet.

Place.	Name of Narrow Gauge Railway.
Uxbridge	Authorized Rickmansworth Railway.
Aylesbury	London and North-western Railway.
"	Aylesbury and Buckingham Railway.
Bruton	Somerset and Dorset Railway.
Radstock	North Somerset (authorized as broad gauge, but being made narrow).
Salisbury	London and South-western Railway.
Dorchester	Ditto ditto.
Bristol	North Somerset Railway.
"	Midland. (The line between Bristol and Gloucester is on the mixed gauge, but is worked on the narrow only.)
Pewsey	Wiltshire Railway (authorized).
Oxford	London and North-western Railway.
"	Oxford and Worcester line of Great Western Railway.
Faringdon	Authorized East Gloucestershire Railway (which may be constructed as mixed gauge on certain conditions).
Hereford	Shrewsbury and Hereford Railway.
"	Newport, Abergavenny, and Hereford Railway.
"	Hereford, Hay, and Brecon Railway.
"	Worcester and Hereford line of Great Western Railway.
Gloucester	Worcester and Dean Forest Railway (under construction).
"	Midland Railway.
Bullo Pill (near)	Severn Junction Railway (authorized).
Newport	Monmouthshire Railway.
"	Pontypool, Caerleon, and Newport (authorized).
Cardiff	Taff Vale Railway.
Swansea	Swansea Vale Railway.
"	Llanelly Railway.
Carmarthen	Manchester and Milford Railway.
"	Llandilo Railway.
Whitland	Pembroke and Tenby Railway.
Merthyr	Brecon and Merthyr Railway.
Christian Malford	North Wiltshire Railway (authorized).
Chard	London and South-western Railway.
Yeovil	Ditto ditto.
Yeovil (Bristol and Exeter).	Ditto ditto.
Highbridge	Somerset and Dorset, worked as narrow only; mixed gauge from Burnham to Glastonbury and Wells.
Wells	Somerset and Dorset (worked as narrow).
Tiverton	Exe Valley (if passed).

Place.	Name of Narrow Gauge Railway.
Exeter	London and South-western Railway.
Lidford	Devon and Cornwall.
Launceston	Ditto ditto.
Bodmin	Ditto ditto.
Truro	Ditto ditto.
"	West Cornwall (the broad gauge is being put down on this line).
Plymouth	Devon and Cornwall.
Basingstoke	London and South-western Railway.
Dorchester	Ditto ditto.
West London Junction.	London and Brighton Railway.
	London and South-western Railway.
	London, Chatham, and Dover Railway.
Brentford	London and South-western Railway.
Richmond (authorized, but not constructed).	Ditto ditto.
Reading	Ditto ditto.
"	South-eastern.
Oxford	Oxford and Worcester line of Great Western Railway.
Stratford	Honeybourne Branch of Great Western Railway.
Banbury	London and North-western.
Leamington	Ditto ditto.
Bordesley	Midland Railway.
Wednesbury	London and North-western.
Swan Village	Dudley Branch.
Handsworth	Stourbridge Railway.
Wolverhampton	London and North-western Railway.
"	Shrewsbury Branch of Gt Western Railway.
"	Cannock Chase Railway (authorized).
"	Wolverhampton and Walsall Railway (authorized).
"	Oxford, Worcester, and Wolverhampton Section of Great Western Railway.
Cheltenham	Midland Railway.
"	East Gloucestershire.
Middle Duffryn	Taff Vale Extension of Great Western Railway.
Yeoford	Devon and Cornwall.
Glastonbury	Narrow gauge portion of Somerset and Dorset Railway.
Victoria	London, Chatham, and Dover.
"	London and Brighton.
Aldersgate Street	Metropolitan narrow gauge portion.
Farringdon Street	London, Chatham, and Dover.
Hammersmith	London and South-western (authorized).

Appendix DB.

Answers to certain Questions regarding French Railways.

(These answers apply to the lines from Paris to Lyons and the Mediterranean.)

1. What is the average speed of passenger trains, express?

2. What is the average speed of—
   - Passenger trains, ordinary? -
   - Goods trains? - - - -
   - Mineral trains? - - - -

1. 28 to 35 miles.

2. 17 to 22 „
   9 to 15 „
   9 to 15 „

In calculating these averages the time of the transit of the train includes the stoppages at intermediate stations.

3. What is the maximum speed of each of these trains, not including the time for stoppages?

3. Express - 43 miles.
   Travellers 34 „
   Goods - 18 „

These are the normal rates of speed. They are often exceeded in consequence of variations of gradient and of delays to make up.

4. What is the average expense of trains per mile of ground?

4. Average expense of trains per mile, f. 4·67 = 3*s.* 9*d.*

Can the cost be given separately for—
- Express trains? - - - -
- Ordinary trains? - - - -
- Goods trains? - - - -
- Mineral trains? - - - -

That is impossible.

5. What are the average receipts of a train per mile?

5. Average receipts, f. 12·67 = 10*s.* 2*d.*

Can the receipts be given separately for express trains, ordinary trains, goods trains, mineral trains?

Separately the receipts can only be given for passenger trains carrying at the same time express merchandise, f. 8·12 = 6*s.* 6*d.*, and goods trains, which is f. 19·09 = 15*s.* 4*d.*

6. Are the passenger tariffs fixed according to a uniform system or scale based on the distance?

6. Yes, save in exceptional cases, stated further on.

7. What is the average tariff rate by each class per mile?

7. 1st class, not including the tax, f. 0·1625, including the tax, f. 0·1950.
   2nd „ „ f. 0·1219, „ f. 0·1365.
   3rd „ „ f. 0·0894, „ f. 0·1001.

8. Are return tickets issued; if so, on what conditions and at what prices?

8. Return tickets are given at reduced rate, to facilitate the traffic between large towns and their suburbs.

They are also given in cases where the distance as the crow flie between two places of frequent intercommunication is considerably increased by the course of the railway.

The reduction admitted in the case of return tickets is 30 per cent.

9. Are there exceptions in the uniform rates of tariff fares?

9. There are none, beyond the return tickets, other than those which consist in applying the basis, not to the distance by rail of the two points, but to the distance to count, reduced to a certain extent so as to allow for the greater distance which the railway route makes.

10. Are there excursion trains?

10. Yes, but very infrequently, and generally for only short distances.

11. What are the conventions with the post office?

11. Despatches are carried gratuitously. On the English system the carriage of mails would bring about f. 6,000,000.

The post office pays nothing but the expense of certain special trains, the income from which is quite insignificant.

12. Are the mails carried gratuitously?

12. Yes, save in the very rare case of special trains when they cannot be forwarded in the post trains.

13. What fares are charged for troops?

13. One-fourth of the ordinary passenger fares.

14. Are the rates for goods and minerals fixed according to a uniform scale based on distance?

14. No, the bases applied vary according to the exigencies of the traffic, and the competition with which the company has to contend.

15. Do the railway companies make exceptions in these uniform tariffs in special cases?

15. The variations in the kilometrical bases are left to the companies, so far as these bases do not exceed the maxima stipulated in the *cahier des charges.*

16. If these exceptions take place, are they made on a definite system?

16. The companies may not apply a tariff until after it has been approved by the administration.

17. Have the director or the administrators the power to apply special tariffs if they think it advisable?

17. They are specially forbidden, except with the State, to make terms of carriage with any one which would give particular advantages to any consigners of goods.

18. Are objections raised against the power of charging special rates?

18. There has never been any serious complaint against the power left to the companies to apply special rates.

Particular bargains, conceding reductions to parties engaging to give all, or a certain minimum tonnage to the company, have been seriously complained of, and have consequently been interdicted.

19. Are terms fixed within which the delivery of goods at destination is to be made?

19. Yes.

20. If the time for delivery is exceeded, is the company liable for damage?

20. In case of delay in delivery the companies generally pay compensation according to the damage actually sustained by the consignee. When the affair is brought before the tribunals it frequently happens that, without damage proved, the company is condemned to allow the consignee, by way of compensation, a portion of the carriage varying from one-tenth to one-third, according to the delay.

21. If the goods pass over the lines of several companies, would the public find difficulty in learning on whom to fix the responsibility of injury to the goods.

21. No. By the arrangements concluded among the companies, the sender or the consignee need never address any other than the company with whom they are in intercourse for the sending or delivery of the goods.

In case of litigation, the company proceeded against calls on those on whom it considers the responsibility of the damage, in respect to which the action is brought should fall, for their guarantee, without the claimant having anything to do with the latter.

22. Is the company compelled to carry all merchandise or all minerals offered?

22. Yes.

23. Is the company bound to furnish waggons?
24. Or are private individuals in any cases obliged to furnish waggons?
25. In this case, under what conditions?
26. Are there instances of competition between railways and water communication?
27. In this case what is the influence of such competition on the tariffs?

23. Yes.
24. No, in no case.
25. No, in no case.
26. Yes, very numerous. Almost all the lines on our system are in competition with canals or navigable rivers, the greater part of which support a most active navigation, and the working of which is entirely independent of that of the railways.
27. The influence of such competition is very marked, and forces the companies to make considerable reductions in the rates. Thus on the same railway of Lyons the average rates charged are f. 0·0589 per kilometre, and the price of certain transports is as low as f. 0·03.

APPENDIX DC.

LETTER and PROPOSAL from the IRISH RAILWAY REFORM COMMITTEE in regard to IRISH RAILWAYS.

IRISH RAILWAY REFORM.

Committee Rooms, Mansion House, Dublin,
6th July 1866.

SIR,

ADVERTING to your letter of the 18th of May last, wherein the Commissioners require to be informed if this Committee have any specific plan to offer or any suggestions to make relative to the action of the State upon the Irish railways,

I have now the honour to transmit, for the consideration of the Royal Commissioners, the views and suggestions which the Committee, after a careful consideration, have come to the conclusion are the best they can devise for improving the condition of the Irish lines, having regard also to the improvement of the country as well.

The Committee direct me to express their sense of the courtesy and consideration extended to them by the Royal Commission in affording them an opportunity of recording their opinions upon behalf of the Irish people; and to state that it will give them great pleasure to afford any further information within their sphere of action should it be called for.

The subject of railway reform has become so popular throughout the country, and information upon it is so much sought for, that I am desired to express a hope that the Royal Commissioners will see no objection to the Committee publishing the views and suggestions herewith submitted.

Waiting the favour of your reply,

I have, &c.

ROBT. JACKSON,
Acting Secretary.

William Pole, Esq.,
Secretary,
Royal Commission on Railways,
House of Lords.

IRISH RAILWAY REFORM COMMITTEE, Mansion House, Dublin, June 25, 1866.

AT a special meeting convened for the purpose of preparing a reply to the letter received by the Committee from the Royal Commissioners on Railways, dated the 18th day of May 1866, desiring to be informed if the Committee had any specific plan to propose to the Commissioners with reference to the action of the State in regard to Irish railways, or any communication to make for their consideration when drawing up their report on the Irish branch of the question.

Resolved—That the Committee submit the following statement of their views on the subject of the inquiry contained in the letter of the Royal Commissioners.

1. That the highly unsatisfactory state of railway communication in Ireland, and the backward and depressed condition of the country, imperatively require that the facilities for the conveyance of goods and passengers on Irish lines should be greatly increased and the charges much reduced.

2. That such reforms cannot be completely carried out except by the agency of the State.

3. That as the best mode of so effecting this object the Committee recommend the following plan:—

I.—That the State purchase, at a value to be settled by arbitration, all the Irish railways already constructed or that have been sanctioned by Parliament.

II.—That the capital required for this purpose be raised by the issue of Government stock.

III.—That when thus purchased, the Irish railways, if not managed directly by Government, be leased out for a limited term in one, two, three, or more groups.

IV.—That the conditions as to charges and as to number, class, time, and speed of trains, on which each group shall be so leased, be precisely fixed by Government.

V.—That the lease of each group be put up to public competition, and granted to the company or private contractor that, giving adequate guarantees for solvency, offers the highest rent.

VI.—That the Government be empowered to advance the funds necessary for constructing new lines or additional works on old lines upon obtaining from the lessees of existing railways, or the districts interested in the construction of such lines or works, proper guarantees and sufficient security for the future working of the lines and for the payment of such a rent as will indemnify the State against all loss by the transaction.

4. The foregoing plan the Committee consider would not only enable the State to introduce complete uniformity in the charges and perfect harmony in the arrangements throughout the entire of the railways of Ireland, but also, without imposing any new burden on the taxpayers, to increase the facilities and reduce the rates for the conveyance of goods and passengers; for the Committee believe that a great saving would be effected by consolidation of management and by the avoidance of Parliamentary contests, and that a great gain would be realized in the difference between the low interest at which the State would borrow the capital necessary for the purchase of the Irish railways and the income at present drawn from them by the existing proprietors and incumbrances. The entire of this saving and of this gain would be available towards the contemplated reduction of charges and increase of accommodation, and would thus furnish the means of introducing very considerable reforms into the Irish railway system.

5. The Committee recommend, however, that the Government, irrespective of the sufficiency of the means thus placed at their disposal, should at once make such a reduction of rates and provide such an increase of accommodation as the circumstances of the country and the defective condition of railway communication may seem to render expedient; and should the rent obtained from the lessees of the railways in that case fall somewhat short of paying the interest and other annual charges involved in the purchase and supervision of the Irish railways by Government, this deficiency might with propriety be made good by a national rate or tax affecting Ireland alone. The Committee are borne out in this last suggestion by an opinion expressed at a public meeting convened on the requisition of influential noblemen and gentlemen representing each of the four provinces, and held at the Mansion House, Dublin, on the 2nd of February last. At that meeting it was unanimously agreed that any deficiency of the kind mentioned should be supplied out of the resources of Ireland rather than the proposed measure of railway reform should fail.

The Committee, in conclusion, beg to state that they have practically kept within the scope of the resolutions passed at the two public meetings held on the subject of Irish railway reform, and also embraced in the memorial presented to the Lords of Her Majesty's Treasury, copies of all said documents having been sent to the Royal Commissioners. The Committee earnestly hope for and rely upon their getting the best and most careful consideration.

Signed by order of and upon behalf of the Irish Railway Reform Committee.

JAMES WM. MACKEY,
Lord Mayor,
Chairman of the Committee.

Correct extract.
Robt. Jackson,
Acting Secretary.

Appendix DD.

Remarks by the Manager of the Great Western Railway Company on Mr. Low's Evidence.

9th July 1866.

With reference to the evidence given before the Royal Commission by Mr. Charles Hoskins Low, the Chairman of the General Committee of the Bristol Chamber of Commerce, it is correctly stated by Mr. Low that no complaint has ever been made to the Great Western Company of the rates from Newport for the conveyance of timber being prejudicial to the Bristol trade.

If any such complaint had ever been made to the Company we could have satisfied the merchants of Bristol that there existed no grounds whatever for it.

This will be conclusively seen from the simple statement that out of a tonnage of 4,668 of timber carried during the year 1865 from Bristol, Gloucester, and Newport to places on the Great Western Railway east of Swindon, Newport only sent 34 tons; while to the towns and places west of Swindon and south of Chippenham, Newport, or Cardiff sent none whatever.

Appendix DE.

Remarks by the London and South-Western Company upon Statements of Mr. John Bullar, as to want of Railway Accommodation at Putney, and as to Through Booking. (Appendices S. and AD.)

London and South Western Railway,
Secretary's Office,
Waterloo Bridge Station,
4th July 1866.

The statement as to want of railway accommodation at Putney represents,—

1st. That "it was not till last year that the company made any attempt to give the necessary accommodation for passengers here, which the increase of the traffic demanded, and what we now have is very scanty." "For years we have been memorializing the company in vain. Hundreds of times was it lamented here that the Board of Trade had no authority to interfere."

2nd. That "no accommodation has been provided at Putney for heavy goods traffic, and that heavy goods traffic was at one time carried on there but is now refused."

With reference to the first representation it will only be necessary to give a brief statement of facts in order to show the erroneous impression under which Mr. Bullar appears to labour, how little occasion there was for memorializing the railway company, and the extent to which interference by the Board of Trade was called for.

In the beginning of 1859 the Directors instructed the engineer to prepare a plan and estimate of the cost for additional accommodation for passengers at the Putney station, and on the 10th February a plan with estimate was submitted, was then approved, and ordered to be carried out.

The works were commenced, but on the 6th April 1859 a memorial from residents at Putney was received, representing that further alterations were desired involving the widening of a bridge which carries a public road over the railway close to the station.

On the 21st April a deputation attended to support the memorial, and Captain Johnstone (one of the Directors) and the engineer were requested to make inspection and inquiries and report the result.

They afterwards reported that they could not recommend the board to undertake the widening of the public road at the sole cost of the company.

On the 23rd June 1861 a letter was received from Mr. John Bullar representing the want of accommodation at the Putney station; and on the 27th June the engineer was instructed to see Mr. Bullar on the subject.

On the 11th July the engineer reported his interview with Mr. Bullar, and received instructions to make an alteration upon the platform, and also to prepare a plan and estimate of the other suggested alterations. On the 5th September the plans and estimates were submitted, and as the question of the widening of the road had again arisen, the solicitor was consulted as to any liability on the part of the company, but it was resolved, even if no such liability existed, that if the local authorities would agree to pay 300*l.* towards the cost the company would undertake the execution of the work.

The solicitor reported that no liability attached to the company, and the local authorities were communicated with, and lengthened negotiations took place, but ultimately they refused to bear any portion of the cost of widening the road.

On the 21st January, 1864, the attention of the Board was again called to the subject, and although they considered the company was in no way called upon to undertake the required improvement of the public road, they consented to do so in order to settle a long standing matter, and alterations involving an expense of 1,350*l.* were ordered to be carried out, and were commenced.

In April 1864 the Metropolitan Board of Works interfered, and required the new station buildings to be set further back, which again caused a postponement, but in May 1864 a satisfactory arrangement was made with the Board of Works, and the alterations and improvements were speedily brought to completion.

It will thus be seen that the directors, willing and anxious from the outset to improve the station, were ultimately compelled to undertake the execution of a work for which they were in no way liable, and with which they had comparatively little concern, in order to effect their object, and that they readily gave their attention to the communications which were addressed to them, while they felt compelled to resist what they believed to be an attempt to obtain a public improvement at their cost.

With regard to the second representation, it is true that no accommodation for heavy goods traffic exists or ever did exist at Putney. The station is in a deep cutting, and is closely surrounded on all sides by a good class of houses, and it would not be possible, without a very large outlay, to construct a goods station there. The company have, however, at considerable cost, taken the precaution of reserving sufficient land to form an additional two lines of rails, although at present that land forms a portion of the gardens attached to the existing houses.

Putney being a suburb of London, and only from four to five miles from the goods station at Nine Elms, it is certain that no goods traffic with London would ever be conveyed by railway, and the traffic with places other than London must be very small indeed; in point of fact, the Board has never been called upon to provide accommodation there for heavy goods traffic.

At Barnes, within one and a quarter miles of Putney, accommodation for goods traffic does exist, and is now being enlarged. No heavy goods traffic has ever been carried on at Putney station.

The statement as to "Through booking" represents,—

1st. "That the South-western Company will not book "through from Windsor to Wimbledon, and though they "only charge two terminals they make two rates. This "gives them, in some cases, a long and a short distance, "instead of one long distance."

2nd. An instance is given of "a ton of hay sent from "Bishopstoke, invoiced to Putney, but conveyed to Nine "Elms, and which was charged 18*s.* 9*d.* (as for a ton and a "half), to which was added 2*s.* 1*d.*, and further expense "was incurred in carting the hay from Nine Elms to "Putney."

As respects the first representation, there is, practically speaking, no traffic between Windsor and Wimbledon, but if any existed, there would be no hesitation in giving a through rate for it. Through rates in fact do exist between Windsor and several stations on the main line, including

Wimbledon, for slates, lime, grain, &c., and parcels by passenger trains are also booked through.

It is practically impossible, as well as unnecessary, to have through rates or through fares between every station on a large system.

For example, between stations in Somerset, Devon, or Dorsetshire, and stations in Middlesex or Berkshire, where no traffic requirements exist, and where, therefore, there is no necessity whatever for through fares or rates as a general rule.

The Richmond and Windsor line is not an ordinary case of a branch line running out of a trunk line, but is a totally separate and distinct system, communicating at London only with the main line, consequently all goods traffic must come into, and go out of, London, in connexion with the two systems.

The plan adopted as a general rule of interchanging the goods traffic between the two systems at London is the most convenient, as the traffic is exceedingly trifling, in very small quantities, in fact single packages, which all have to be transferred from one waggon to another, and no extra charge is in fact entailed upon the public by that mode of conducting the business.

As regards the second representation, it appears that on the 2nd May 1865, 40 trusses of hay arrived at the Nine Elms goods station, London, invoiced from Bishopstoke to Nine Elms for Mr. Bullar, and not invoiced through to Putney, as he states.

The charge for conveyance of hay from Bishopstoke to London (72 miles) is a specially low rate of 12*s.* 6*d.* per ton, but with no less charge than for 30 cwt., the object being to apply that special rate to full waggon loads only.

The charge for the 40 trusses of hay, weighing about one ton, was therefore 18*s.* 9*d.*

The explanation of the extra charge of 2*s.* 1*d.* is, that on the 2nd May Mr. Bullar was advised by post of the arrival of the hay, and requested to remove it, but this he did not until the 6th May; and in order to save him the charge for demurrage of waggons, the hay was unloaded and stored, and it is for this labour the charge was made. No knowledge exists of Mr. Bullar's carman having been refused the hay when he called for it, but if such a fact had been represented no extra charge would have been made.

FREDERICK CLARKE, Secretary.

APPENDIX DF.

LETTER from LORD NAAS to the CHAIRMAN on the Subject of IRISH RAILWAYS.

Irish Office, London,
November 9, 1866.

MY LORD DUKE,

I HAVE the honour to enclose a copy of a Bill as amended by a select committee of the House of Commons of last Session, to amend the Tramways, Ireland, Act, 1860.

The Bill was referred to a select committee, consisting of some of the most experienced members of the House of Commons, and was by them adopted in the form it now stands, after much discussion and consideration.

A copy of the evidence taken during the inquiry I have also the honour to enclose.

I take the liberty of bringing this subject under your Grace's notice in the hope that the purposes and objects of the Bill may be fortunate enough to receive your Grace's approval and the approval of the Royal Commission of which you are chairman.

The principle is novel, but I firmly believe that in the present circumstances of Ireland its passing into law would have the most useful effect, because it is impossible to expect that railway extension in Ireland will take place on any scale commensurate with the wants of the country unless greater facilities are given for the obtaining of the necessary powers, and that alterations are made in the law to enable railways to be made at a far less cost than heretofore.

I believe that railways can be made at the rate of 3,000*l.* a mile under the system proposed in the Bill, and that many branch lines would in a few years be completed which would never be even proposed under the old and expensive system.

I would take it as a great favour if your Grace could inform me when the report of the Royal Commission is likely to be published.

Great interest is felt in Ireland on the railway question generally, and the opinions and recommendations of the Commission are looked for with the greatest interest and anxiety.

I have, &c.
(Signed) NAAS.

His Grace the
Duke of Devonshire, K.G.

APPENDIX DG.

MEMORANDA on the CONNEXION of the AUSTRIAN GOVERNMENT with the RAILWAYS in that Country.

(*Communicated to the Secretary of the Commission.*)

Our Government, with the intention of promoting the construction of railways by private companies, has adopted and frequently carried out the system of subventions, *by guaranteeing a certain income* to the shareholders on the capital they invested in the undertaking. With the exception of three or four of our railways, *all the others* have been constructed under these guarantees on the part of the Government, that is to say, for 5*l.* per cent. yearly interest and for the repayment of $\frac{2}{10}$ per cent. of the capital invested. This guarantee is granted for the duration of the privilege, namely 90 years. On the other hand, the sums which the Government are compelled to pay to the shareholders on the ground of this guarantee are only considered as *an advance*, must bear interest at the rate of 4*l.* per cent. per annum, and must be *returned* to the Government partly from the produce of the railway at a later period, if it exceeds the yearly income of $5\frac{2}{10}$ per cent., partly, as far as it has not been reimbursed before the expiration of the privilege, *after the expiration of the privilege out of the working stock belonging to the company.* The railway, with all the *immovable* appurtenances, devolves to the State without any compensation. The capital invested by the company having been repaid by means of the yearly $\frac{2}{10}$ per cent. amortization-rates, there is no reason to pay a particular compensation for the immovable property.

Assistance granted in the form of loans, land, works, &c. is *not* usual in our country. Up to the present time only *one case* of this sort has occurred, with respect to the Oest Losoncz Railway Company. The company became bankrupt before the completion of the line, and the Government in order to save the money expended, and the already half-completed works, has granted to a new company, which has to be formed, a certain quantity of rails manufactured in the Government ironworks, and a *certain advance* of ready money, amounting together to 6,000,000 *florins.** This advance must be repaid in a period I believe not exceeding 12 years, and the new company purpose repaying it by means of a loan which has the precedence, and which they hope to be able to conclude in the course of these 12 years. It is not possible for me to state for the moment what sums have already been paid by the Government in consequence of their guarantee. These sums appear annually in our budget, and I can only say they amount to a *considerable cipher.*

Vienna, 23rd Oct. 1866.

* 600,000*l.* sterling.

Appendix DH.

Letter from Mr. C. W. Eborall, Manager of the South-eastern Railway, on Government and Private Aid given to French Railways.

South-eastern Railway,
General Manager's Office, London Terminus,
Sir, October 17, 1866.

Referring to your letter of the ————, I have made inquiry abroad, but it seems to be very much more difficult than I had anticipated to get the question of the part taken by the Government departments, individuals, &c. in France in the construction of railways, answered.

Referring only to large lines and their branches, I gather that there are several cases where lines have been commenced by the Government, but upon concessions to companies they have been given up with the works executed.

Others receive subsidies inferior or equal to the probable expense of construction.

It is a very rare case, but in some instances affluent private individuals have offered contributions in part, and departments equally have voted subventions, besides towns and parishes, but the co-operation, the most desirable from them, has been the free gift of lands.

From subventions we pass to guarantees of interest, and the following will serve as an example to illustrate the general action.

Suppose a large company with its line complete yielding 60 francs per share, with net receipts of 35,000 francs per kilometre, and desirous of undertaking a second or new line in order to meet competition from an adverse line; in this case agreement is made, that according as the lines are opened the deficit of their product to pay interest on the capital engaged and sinking fund to liquidate it (l'amortissement) shall be made good by the old line up to its smallest guarantee of 60 francs per share, or up to its net product of 35,000 francs per kilometre; the State pays the surplus, but it must be borne in mind the Government has itself fixed the capital upon which the guarantee is given, as well as the amount of interest and of the liquidating or sinking fund (l'amortissement).

This seems to be the basis on which the Government subscribe to guarantees of interest; but modifications in accessory conditions are sometimes made, thus the guarantee may be given so as not to come into operation, say upon each section opened of a line, each line of a group opened, but to apply only on the opening completely of a whole line or groups of lines for traffic.

In that case the deficiency of the divisions is borne by capital for construction.

The Government too reserve themselves the right to recoup their payments for guarantee so soon as deficiency ceases.

I am, &c.
(Signed) C. W. Eborall,
General Manager.

W. Pole, Esq.,
Royal Commission on Railways,
House of Lords.

Appendix DJ.

Letter from Mr. R. Dudley Baxter on the System of Amortization of Railway Capital in France and other Continental Countries.

(*Forwarded to this Commission from the Board of Trade.*)

6, Victoria Street, Westminster Abbey, S.W.,
Sir, November 5, 1866.

May I call your attention to the system of amortization in France and other continental countries by which the capital invested in railways will within a limited number of years be redeemed by the operation of a small annual sinking fund, and the whole railway property will become vested in the state and available for payment of interest on the National Debt.

In France the amount of railway capital expended on lines open is now 260,000,000*l.*, and there are so many lines approaching completion that it will soon amount to 360,000,000*l.*

This amount is raised about three-fourths in debentures and one-fourth in shares. But every debenture and share has a sinking fund of rather more than half per cent., and the debentures or shares to be paid off in each year are determined by annual drawing by lot.

The effect of this system will be that at the end of 99 years from the granting of the concession of each railway, the railway will become the property of the state, unencumbered by share or debenture capital of any kind.

As the public debt of France was in 1863, 483,000,000*l.*, this will be equivalent in effect to paying off the principal of nearly three-fourths of the present total debt.

In Belgium the system has been in operation since 1834, with the result that in 1884 the whole of the interest on the public debt of 26,000,000*l.* will be paid out of the proceeds of the railways.

In like manner Austria has 65,000,000*l.* of capital, which at the end of 90 years from the first concession of the railways will become the unencumbered property of the state, and even Spain will amortize upwards of 60,000,000*l.* of railway capital in 99 years from the dates of the concessions, which will be available towards paying the interest of a still larger portion of the public debt, which amounted in 1864 to 145,000,000*l.*

It would be to the public advantage to ascertain the practical manner in which this amortization is carried out in France by obtaining the regulations under which the directors of the different railway companies are bound to account to the public departments for the amortissement, and the manner in which they apply it to paying off the debentures or shares which are drawn.

I do not know whether this subject was considered by the Royal Commission on Railways, but if not the French Government would no doubt give all information on application from the Board of Trade.

I have, &c.
(Signed) R. Dudley Baxter.

The Right Hon.
Sir Stafford Northcote, Bt., M.P.,
President of the Board of Trade.

Appendix DK.

Memoranda as to the Assistance given by the Governments of Prussia, Austria, and Holland to the Railways in those Countries.

Dusseldorf, 6th November 1866.

In compliance with the request of the Royal Railway Commission I have the honour to add to my evidence the following information, as to the amount of assistance which is given to railways by the State in Prussia, and, so far as I can ascertain, in Austria and Holland.

To make the facts and details intelligible and applicable for comparison in questions of railway reform in Great

Britain and Ireland, some preliminary remarks appear essential.

PRUSSIA.

For all railways in Prussia there is one, common, simple law or decree, dated 3rd November 1838, of 49 clauses, and an addition as regards income tax on railways of eight clauses, dated 30th May 1853.

The law of 1838 fixed the general principles of the relations which are to exist between the State, the railway companies, and the public, and reserves to the executive government with the royal assent the granting of concessions for separate lines, the approval of the plans, the works, the amount of capital, share and loan, the extension of the same, the statutes of the company, and the tariffs.

The other principal features of the law bearing on the present subject are :—

The concession being granted (after the whole capital is subscribed), the powers of expropriation of land and premises follow. The procedure is very simple, with an appeal, in case of dissatisfaction on the part of the owner, to the courts of law, without, however, such appeal preventing the progress of the works.

In order to exercise a constant supervision by the State a permanent commissioner is appointed for each group of railways, through whom all arrangements between the State and the railway companies are carried on, and he is empowered to attend and even call meetings of the board of directors of the railway companies.

The transport of mails and post office business in general must be effected by the railway without cost to the State, the railway company furnishing a post office carriage with each passenger train. Soldiers and military stores are also carried at reduced rates.

An income tax or duty, upon the net profit on the share capital, after deducting management, maintenance, working expenses, reserve and renewal funds, as well as interest and sinking funds to pay off loans, is payable to the State before striking the dividend, upon the following rising scale, viz. :—

When the net profit amounts to 4 per cent. $\frac{1}{40}$ thereof.
" " over 4 to 5 " $\frac{1}{20}$ "
" " " 5 to 6 " $\frac{1}{10}$ "
" " " 6 per cent. $\frac{2}{10}$ "

This income tax is to be applied by the State in buying in the open market the shares of the company which pays it, and the interest and dividends on these shares are to be applied in like manner, the shares themselves being taken for ever out of course and deposited in the national debt office of the State, and thus, by degrees, the share capital of the company will be amortized.

The State reserves to itself the property in the railway, with all belonging thereto, upon paying the value, under conditions, of which the chief are as follows :—

1. The sale cannot be demanded sooner than 30 years after opening the line.
2. One year's notice must be given.
3. The value to be paid shall be fixed on the principle of paying the company 25 times the amount of the average yearly dividend for the previous five years.
4. The debts of the company shall be undertaken by the State, who, in addition to all the rent and chattel property, shall also receive the collected reserve funds.

Injury to the railway in war, either by the enemy, or by the State itself for the protection of the country, gives no title for damages against the State.

For 30 years after opening the railway competing lines of railway, near the first, between the same end points, and passing through the same chief places, will not be granted, but other improvements of the communications between these places and in the same direction are not hereby excluded.

The railway company is bound, in compliance with the decision of the Ministry of Commerce and Public Works, to admit and give facilities for the junction of other railways.

The concession, with the railway, and all belonging thereto, can be publicly sold for the account of the company when they do not fulfil the general or particular conditions of the law, &c., after due notice and a final extension of the time of not less than three months.

Finally, the law reserves to the State the right of making alterations and additions as experience may prove to be necessary, and binds the companies to obey the same, giving, in case such changes reduce income or increase expenses, a suitable remuneration.

From the foregoing abstract it will be seen that the railway policy of Prussia has been to regard the promotion of railways and their construction with the least possible preliminary expenses, in the best and most economical manner, as an especial duty of the executive government, combining government aid with private capital, exercising an executive control for the protection, not only of the capitalist as shareholder or lender, but still more for the public in using the railway, and for the country itself in the development of its productiveness and industry, with its defence in time of war, and finally a gradual redemption out of the profits of both the loan and share capital.

All this is still more clearly evinced in the administration of the law up to the present time, by the following facts and results abstracted from authorized returns, and information obtained from qualified persons.

Prussian Railways, 1863.

Length in English Miles.	Capital (for all Purposes). Concessioned. In Shares.	Capital (for all Purposes). Concessioned. In Loans.	Capital (for all Purposes). Expended. Total.	Capital (for all Purposes). Expended. Per Mile English.	Average net Profits in 1863 per Cent. of Total Expended.	Remarks.
	£	£	£	£	£	
I. Railways constructed and managed by the State.						
950	- - -	- - -	14,944,431	15,731	$7\frac{66}{100}$	—
II. Private Railways managed by the State.						
$876\frac{1}{2}$	7,670,942	10,500,373	15,885,854	18,124	$6\frac{71}{100}$	Paying dividends to shareholders from $2\frac{30}{100}$ to $10\frac{50}{100}$ per cent.; nothing in two cases only recently opened; average $5\frac{32}{100}$ to $5\frac{39}{100}$ per cent. for 1863.
III. Private Railways managed by the Companies.						
$1,948\frac{1}{2}$	14,066,100	20,286,255	32,636,758	16,754	$7\frac{66}{100}$	Paying dividends to shareholders; nothing in one case, $2\frac{1}{2}$, $4\frac{1}{3}$, 6, $7\frac{1}{2}$, $8\frac{1}{3}$, $9\frac{3}{4}$, 13, 14, 17, and $22\frac{1}{3}$ in 1863, making an average of $8\frac{43}{100}$ per cent.
*3,775	- - -	- - -	63,467,043	16,812	$7\frac{42}{100}$	

* The results from 1863 to the present time (not yet fully available in print) are still more favourable than the above mentioned.
These totals are exclusive of about 198 miles, costing 1,851,845*l.*, of Horse branch and other railways not classified with the above, or not fully opened.

As shown in the foregoing table, the railways are divided into three classes, and the assistance given by the State is as follows :—

	£	£
Class I. The State has constructed and manages these railways at its own cost, making a total of - - - - - -		14,944,431
Class II. Private railways managed by the State :—		
In this class I find the State itself has taken shares to amount of - - -	538,595	
Has guaranteed interest upon shares at 3½ per cent. to amount of - - -	1,935,000	
At 4½ per cent. to amount of -	1,237,000	
And at least, in one case, directly guaranteed interest at 3½ per cent. on a loan to amount of - - -	1,837,500	
It is difficult, without going into the details and history of each railway in this class to find exactly how much of the loan capital thereof has been guaranteed in express terms by the State, but in fact the State, by taking upon itself the whole management and maintenance, may well be considered to make itself, at least, morally responsible for the whole expenditure, as in table, and it appears so far, with profitable results - - - -		15,885,854
Class III. Private railways managed by private companies :—		
I have not a table which shows the total amount of assistance by the State to these railways, but from the accounts of many of them in this class I find at least—		
That the State has taken share capital itself, and guaranteed interest for ever at 3½ per cent. on share capital to an amount of -	3,066,000	
The State has guaranteed interest at 3½, 4, and 4½ per cent. on loans secured by "obligations" to amount of - - -	9,225,000	
Thus making out of a total expenditure of 63,467,043*l.* a total assistance by the State in capital, in guarantee for interest on share capital and loans, to an amount of - - - -		43,121,285

Consistently with the law of 1838 the State has mainly assisted and promoted railways in cases, where—

1. In the beginning, from the novelty of the principle of railways or the want of local means, the prospects of remuneration appeared then insufficient to induce private capital alone to incur the risk of their formation.
2. It was necessary to connect districts with each other, or with navigable rivers or harbours, or to connect existing systems of railways, where conflicting interests might delay or mar the object. Thus the "Verbindungs Bahn," connecting all the railways terminating in Berlin, has been constructed, and, for the reasons given, is managed by the State.
3. It became desirable to open up districts containing mineral or other products capable of development when such a mode of communication was secured, the State in many such cases requiring as a preliminary to granting the concession and assistance, that the district itself should furnish the land or sufficient funds to buy, free of cost to the railway company, the land for the purpose.
4. To promote branch lines as feeders to main trunk line or open up such districts as last mentioned, the assistance given by the State has been in some late instances a free grant of a proportion of the cost per mile.

In all the agreements for assistance and concessions to private railway companies, conditions have been made chiefly for the benefit of the public, in the fixing of low tariffs, in the construction of branches, the delivering up the management to the State in certain cases, the reservation to the State to buy back the line in certain contingencies at an earlier date than fixed by the general law, and in recouping the State for its expenditure under guarantees for interest through a participation in the profits over and above the guaranteed rate of interest in certain proportions.

For instance, in the case of the Coln-Minden Railway with its great bridge over the Rhine and extensive branches having a share capital of 1, 950,000*l.*, and loans of 7,391,175*l.* = 9,341,175*l.*

The State in the commencement took for itself 279,000*l.* of the share capital, and guaranteed for ever the interest at 3½ per cent. on the rest of the *share capital*, amounting to 1,671,000*l.* In addition the State guaranteed from time to time the interest at 3½ per cent. on loans (amortizable) to the amount of 4,950,000*l.*, on the condition, amongst others, that ⅓ of the net profits over five per cent. on the share capital should be paid to the State, and as this railway has been paying dividends of 10, 12, and up to 16 per cent. very large sums have from this source come back to the State.

The sums so received by the State, with the dividends on its own shares and the income tax from the railway, are devoted, according to original agreement, to purchasing up at par the original shares of the company, taken by lot, the dividends upon which also go to the same purchase fund, so that ultimately the whole railway would vest in the State.

In this case the system worked so well that in a very few years the Government would have come into possession, but in the present year the Government and company have entered into other arrangements materially advantageous to both, by which the company retains the railway.

But it is in the financial system of the Prussian railways, in the organizing and giving confidence to the system of loans, at moderate rates of interest, with the repayment spread over a great number of years, secured by so-called "priority obligations," that the State, by its control in matters of account, and its example in giving, where necessary, guarantees for the interest, has essentially promoted railways with the benefit to the shareholders, lenders, and public shown in the returns.

Of the amount of loans in the table 30,786,628*l.*

About	12½ per cent.	has been borrowed at	3½	per cent. interest.
„	45	„	4	
„	40	„	4½	
„	2½	„	5	

In most cases the sinking fund for reducing these loans does not exceed ½ (one half) per cent. The "priority obligations," which are generally for sums from 15*l.* to 30*l.* each, are called in for repayment by lot. The repayment extends according to the arrangements in each case over 50 to 60 or more years.

From such loans the largest portion of the cost of private railways has been provided; their priority to dividends makes the management careful and prudent, whilst the definitively settled duration of the loan and the comparatively small annual amount payable for its interest and liquidation, enables good managers to pay yearly increasing dividends on the share capital, and the gradual extinction of the debt increases yearly the value of the security to both shareholders and lenders.

This financial system, with its freedom from the sudden or untimely demand for repayment of principal involved in the British loan and railway debenture system, has doubtless enabled the railway directors in Prussia to adopt the low tariffs referred to in my former evidence, and to carry out in the whole policy of the railway traffic those gradual reductions in charges and increase in public accommodation which I have shown have resulted so profitably to the railway interest itself and the country.

AUSTRIA.

The railways are established in pursuance of the law of 18 June 1838, enlarged and modified by that of 14 September 1854.

The definite concession is granted by the Emperor, and only for a fixed time, not exceeding 90 years, counted from the time of the opening of any part of the line. After the termination of the time stated in the concession the property in the railway, the land and buildings, go over directly and without payment to the State, and the company is bound to deliver over the same in good repair and working order. The property in the rolling stock, &c. remains to the company.

The railway tariffs must receive the approval of the ministry of commerce and public works every three years. If the net profit from the railway exceeds 15 per cent. the Government has the right to make reasonable reductions in the tariffs.

The concession is forfeited if (without grounds approved by the State) the completion and opening of the railway do not take place at the time fixed in the concession.

All the railways in Austria, whether originally constructed by the State or not, appear now to be in the hands of private companies.

AUSTRIAN RAILWAYS, 1863.

Length in English Miles.	Capital (for all Purposes). Concessioned. In Shares.	Concessioned. In Loans.	Expended. Total.	Expended. Per Mile English.	Average Net Profits 1863 per Cent. of Expenditure.	Remarks.
	£	£	£	£		
3,694	41,117,031	29,534,416	65,057,677	17,611	6 $\frac{70}{100}$	Dividends, 3 to 11$\frac{3}{4}$ per cent., average 7 $\frac{33}{100}$ per cent. 1863.

Of the share capital, the State appears to have guaranteed five per cent. for interest, and $\frac{2}{10}$ per cent. for sinking fund on nearly the whole amount, at least I make it out, on the sum of - - - - - £ 38,000,000

Of the loans it is difficult, without investigating all the agreements made with the various companies, to find out the total amount upon which the State has guaranteed interest; but at least guarantees have been given on an amount of - - 12,000,000

This making, out of a total of 65,057,677*l.* which the railways have cost, a sum of 50,000,000*l.* for which the State has guaranteed interest, and thereby secured the investment of capital on its extensive and in many cases difficult and expensive railways.

The statistics, however, show that Austria has not introduced into her railway system the low fares which have so eminently conduced to the production of large profits in the Prussian system.

HOLLAND.

The fact that Holland is for the greater part an agricultural country, without minerals or extensive manufactures, and provided with canals from an early period, seems to have retarded the commencement of railways or any very active measures for their formation by the State, and for a long time only two private railways, constructed mainly with English and German capital, existed, and to these little or no aid was given by the State.

But the success of these two lines, "The Dutch Rhenish" and "The Holland" railway from Rotterdam by the Hague to Amsterdam, with the experience of the progress of railways in other countries, at last aroused the State to undertake at the public cost a few years ago the construction of a complete system of railways for all that part of Holland not pre-occupied by private companies.

The State seems to have been by experience compelled to acknowledge the necessities of the case, its own helplessness to enforce or induce the construction by private companies of lines or connexions useful to the country, but either of doubtful profit as private speculations or clashing with the separate views and interests of existing private companies, and although Holland starts thus late in the government support of railways, yet the policy it has adopted, so different from that of many other nations, may be well worthy of attention, namely:—The State lays out and constructs at its own cost the railways, retains its property therein and a certain control over them, but lets on lease the working of the lines to private companies. The State has begun by devoting 100,000,000 of florins, about 8,340,000*l.*, to this purpose, to be gradually expended in 10 years.

The following memorandum, with which I have been favoured by an eminent authority on railway matters in Holland in reply to my inquiries for information for the Royal Railway Commission, supplies, with the foregoing remarks, the best information on the subject.

MEMORANDUM containing some Information as to the Railways in Holland, as desired by the Royal Commission of the House of Lords.

1. The King of Holland, William I., fully convinced of the great importance of a railway junction between the Dutch seaports and Germany, proposed in 1837 to the Chambers to build such a railway for account of the State, beginning with a line from Amsterdam to Arnheim.

This proposal having not been approved of, the king issued in 1838 a decree, by which he opened a loan to the amount of 9,000,000 florins at an interest of 4½ per centum per annum, guaranteed on his personal estate. The produce of this loan was to be used for the construction of a railway from Amsterdam to Arnheim, whilst His Majesty reserved to himself the faculty to increase this loan subsequently to obtain the necessary funds for a junction from Rotterdam to Utrecht. The loan was to be redeemed out of the profits of the undertaking, whilst after the whole loan had been paid off, the railway with all its dependencies would be the property of the State.

The first years of the undertaking having been very unsuccessful in the results, King William II. resolved to give up the whole undertaking to the Dutch Rhenish Railway Company, which meanwhile had been formed in consideration of taking over by said company all the obligations of the above-named king's loan. The company would be at liberty to supply the funds eventually required for redemption of the loan out of their social capital, but on the other hand, government would be bound to refund to the company all amounts whatever spent by them either for construction, for improvement, or for redemption, before the State could take over again the undertaking from the company.

2. Originally the line had been constructed on the broad gauge, but as it proved on occasion of the negotiations with Prussia concerning the junction of the Dutch Rhenish to the German railways, that Prussia made the condition that the narrow gauge was to be adopted for the whole line, government agreed under different stipulations to a subsidy of 1,000,000 guilders to the company, in order to enable them to narrow their broad gauge. This sum has been paid to the company, but besides it the company have never received any other subsidy from the State.

3. As far as is known, none of the other railway companies in Holland ever received any subsidy from the State. However at present a draft law is pending before the Second Chamber by which government ask the necessary authorisation to make a temporary advance of at most 2,500,000 guilders to the company for the working of the State railways, evaluated at 60 per cent. of the value of their rolling stock, at an interest of 5 per cent. per annum. This advance ought to be repaid within three years.

4. The State railways in Holland are being constructed by government entirely with public money, according to a general plan adopted by law.

The working of all the State railways, with the single exception of the North Holland line, has been left to a private company, called the Company for the working of the State Railways, which had been formed to that effect. The North Holland State Railway has been left for working to the Dutch company (Hague line) who engaged to build a junction line from Haarlem to Castricum, where they wish to join the State railway from the Nieuwe Diep to Amsterdam, viz., the North Holland line.

5. At the time when the law was adopted by the Chambers the total cost of construction of the State railways was estimated at one hundred million guilders. The amount to be spent every year would be ten million guilders. However, it appears from a recent communication that the total cost when the very extensive station works both at Amsterdam and at Rotterdam will be completed, and further the large bridge over the Moerdyck be constructed, will certainly reach the sum of one hundred and fifty million guilders.

6. As the State railways are a government undertaking, the necessary funds were unconditionally provided.

7. The capital already spent and further to be spent for the construction of the State railways in Holland is considered as a public and permanent property of the State. As far as the State will participate in the net proceeds of the working (See No. 8) this share will come to the benefit of the general income.

8. The State do not run any risk of loss in consequence of the working of the State lines, as such risk has been left entirely for the account of the company for the working of the State railways and of the Dutch company that have undertaken the working; Government are to participate in the net profits, which are to be divided between them and the companies according to a scale which has been agreed to by contract.

As the State up to the present has constructed their railways exclusively out of the funds available in the exchequer, it has of course not been necessary to contract loans to that effect, so that also no special tax has been raised with a view to secure the payment of the interest.

9. The private companies' railways have an extension of about 505 kilometres or 315½ English miles in Holland.

10. Seven private companies are working the above mentioned railways.

11. The State railways when completed will have an extension of about 864 kilometres or 540 English miles.

12. With respect to the proportion between the "stamaction" capital and the loans of the several private railway companies, it is difficult to give full information, as the

printed reports do not always enter into sufficient details. However the following can be stated:—

The Dutch company's (Hague line) social capital amounts to 6,500,000 florins whilst their loans amount to about 11,090,000 florins. Their social capital has however of late been increased.

The capital of the Netherlands Central Railway Company is 5,000,000 florins. On the bonds issued by them they will have to repay in 83 years about 11,500,000 florins.

The capital of the company for the working of the state railways is 12,000,000 fl., the half of which has been paid up. The company did endeavour to contract a loan of 5,000,000 fl., but without success.

It is very likely that this company will now receive, as mentioned in par. 3, an advance from Government to the amount of 2,500,000 fl.

The capital of the Almelo-Salzbergen company is 2,100,000 fl., and the amount of the bond debt 632,000 fl.

As to the capital of the other companies no details can be given.

13. The acts of concession of the different railways generally contain the conditions on which the undertaking may extend their capital by the issue of more shares or raise capital by the contracting of loans. These conditions are not fixed by law, and are quite different in each case. So, for instance, the Dutch Rhenish Railway Company is quite at liberty to contract as many loans as they desire, whilst for any increase of the social capital by the issue of new shares, the royal sanction must be obtained. In case the concessions do not contain any stipulations to the contrary, the company is free to offer such terms as to the rate of interest, and the amounts to be yearly redeemed, as they may consider expedient under the then existing circumstances.

October 24th, 1866.

Perhaps I may in conclusion be permitted to state, in reference to the whole subject of the inquiry of the Royal Commission, to my former evidence, and the information now supplied, that whatever may be the difficulties of interfering with the present state of things in Great Britain and Ireland, unquestionably in both a modification of the present loan and debenture system, by the *organization* of a consolidated "priority obligation" system, such as I have described, and which has been so long proved on the continent, would under proper control be attended with great benefit to the country and the railway interest itself.

For Ireland, viewed by itself, the results of all my investigations now lead me to the conviction that the whole of the railways should be the property of the State (as recommended by the first Irish Railway Commission), that the different systems should be connected together so as to admit of through traffic with each other and the harbours, and that the working of the railways should under fixed conditions be let on lease to one or, at most, two companies.

I am convinced that the country and the time are suited for such a system and change, and that with greatly reduced tariffs (one-half in most cases) a plan and a law can be devised for carrying out such a project without delay, and without ultimate risk or loss to the State.

Wm. T. Mulvany.

(*See also Appendix DT.*)

Appendix DL.

Memoranda on the Assistance given by the French Government to Railways in that Country.

(*Communicated to one of the Commissioners.*)

Outlay made and to be made for the construction of the lines of the six great railway companies in France to 31st December 1864.

Names of the Companies.	Total Outlay by the State, the Departments, and the Companies.	Subventions by the State, in Money or Works, not repayable.	Outlay made and to be made by the Companies.	Subventions by the Departments, the Communes, and various.
	Fr.	Fr.	Fr.	Fr.
Nord - -	639,858,174	2,462,867	634,576,670	2,818,637
Est - -	1,293,837,259	187,556,153	1,099,875,348	6,405,758
Ouest - -	1,170,610,376	218,991,009	937,442,391	14,176,976
Orléans - -	1,659,113,730	338,705,803	1,316,405,652	4,002,275
Paris, Lyon, Méditerranée.	2,630,052,073	369,586,677	2,233,455,572	27,009,824
Midi - -	823,536,887	175,200,000	647,946,887	390,000
	8,217,008,499	1,292,502,509	6,869,702,520	54,803,470

The table only refers to the six "grands reseaux." In addition to the advantages of subventions the Government has guaranteed nearly all, if not all, the bonds paid by the companies in question; sometimes the guarantee does not quite cover the cost of interest and sinking fund, for instance, the Lyons line has a guarantee of 5 per cent. upon the bonds paid for the lines there, and the money costs a fraction more than $5\frac{1}{6}$ per annum.

It is also asked whether the subventions are to be reimbursed to the Government. They are *not;* but it must be remembered that in France the companies have a lease of 99 years of their lines, and at the expiration of the term, the whole becomes the property of the Government.

The Austrian and Italian lines have been all made on about the same principle as the French.

The companies not included in the enclosed are without importance.

APPENDIX DM.

COMPARISON of the RAILWAY SERVICE in FRANCE and ENGLAND between the Metropolis and various—

Naval Arsenals,
Commercial Seaports,
Suburban Districts,
Royal Palaces,
Celebrated Cathedral Towns,
Large and Small Provincial Towns.

Prepared for the Commission from Official Time Tables, 1865 and 1866.

(N.B. When there are several lines of different lengths between the same places the fares are calculated on the shortest distances.)

NAVAL ARSENALS.

APPENDIX DO.

PARTICULARS as to the CAPITAL, &c. of the RAILWAYS in BELGIUM.

(Furnished to the Commission by M. Fassiaux, Director-General of the Belgian Government Railways, and accompanied by Official Returns.)

Brussels, December 5, 1866.

1st. What proportion exists in Belgium between the kilometrical cost (mileage) and the capital?

A. In the railway of the State?

B. In railways belonging to individual companies.

A. The tables forming pages 10–14 of the accompanying pamphlet,* give the details of the expenses of first establishment incurred on the railway of the State to the 31st December 1864.

The sums total of these expenses as well as the kilometrical proportions are as follows:—

	Francs.	Francs per Kilometre.
Establishment of the Railway	136,262,527·35	233,209·00
Construction of the Station Buildings	30,523,933·94	52,481·14
General Expenses	5,280,708·29	9,221·49
	172,067,169·58	294,911·63
If to these sums, which refer to construction properly so called, we add the cost dependent on the purchase of the rolling stock, they will amount to	43,495,964·98	76,428·72
The total Capital for first establishment will be	215,563,134·56	
Or average cost per kilometre		371,340·35

These figures have increased during the year 1865; and it is to be remarked that the expense of first establishment is apt to increase, to some extent, indefinitely, by reason of the continual extension of traffic, which necessitates either works for the enlargement of stations already established, or the building of new stations, as well as an increase in number and strength of vehicles and engines.

The annual expenses of working only include the cost of the maintenance or renewal of works or stock already existing.

B. The same information does not exist, at least according to such precise data, with respect to the lines conceded to individual companies.

For these, the total amount of the shares or obligations issued by each of them has generally been admitted as capital for the first establishment, and the total of these issues has been compared with the length of the lines to establish the kilometrical cost, but it has been impossible to distinguish between the different categories of expenses.

This information is given in tables 24–37 (6th and 18th columns) of the same pamphlet.

It will be remarked that almost without exception the kilometrical cost of these lines is less than that of the railway of the State. This difference arises principally from the reasons that railways worked by companies have generally only a single line, whereas on the railway of the State the line is almost everywhere double; and that the works of completion are less advanced on the conceded lines, which are of a much later construction.

2nd. What is the mean revenue realized by the working of conceded railways?

The tables already quoted, pages 24–37 (19th column) of the pamphlet, indicate the results of the working during the year 1864.

When in those tables two figures are used to express this result, the highest includes the payment of the sum given by the State under the head of a guarantee of a minimum interest on a fixed capital *(see the answer to the question relating to the intervention of the State, below)*; the lowest gives the revenue really obtained by the working, not including the payment above mentioned.

The other pamphlets attached to this paper give in similar tables the results obtained since 1856.

3rd and 4th. What has been the intervention of the Government in favour of the railway companies, either by means of subventions or otherwise?

Since the establishment of concessions of railways in Belgium the Government has not interfered in any way in their favour. But later, crises of various kinds having arisen to prevent either the continuation or even the undertaking of works by reason of the difficulty of obtaining the necessary capital, Government has consented, with the consent of the Legislative Chambers, to guarantee a minimum revenue, representing a rate of interest fixed on a part of the capital of first establishment.

Saving one single exception, the State has only had to pay hitherto part of the sums promised, when the annual receipts did not amount, after deduction for the working expenses, to the minimum revenue guaranteed.

The sums thus paid by the Government are repayable as soon as the revenues of the lines interested have attained a given amount.

The pamphlet attached to this under the letter A. contains (pages 76–105) very precise information on this subject for each of the railways conceded to companies that were working in 1859.

* This paper was accompanied by printed pamphlets of statistics.

APPENDIX DP.

FURTHER STATEMENT by Mr. G. W. HEMANS regarding IRISH RAILWAYS.

December 10, 1866.

IN reference to my evidence before the Railway Commission, I now forward a calculation on which it seems to me a system might be founded for the absorption of all the Irish lines into one management, with great benefit to the country, and probably no real loss to the Government. A reduction of all fares 25 per cent. would save the country (in round numbers) 400,000*l.* per annum, while the utmost deficit could not exceed 257,000*l.*, which might have to be levied for a short period by baronial rates. This rate, if ever levied, would be 5*d.* in the pound on rateable property in Ireland, 4*d.* on each acre of arable land, or 3*d.* in the pound addition to the income tax of the country.

In this calculation I have taken the floating debt, to include what are called Lloyd's bonds, at 2,000,000*l.*, which I believe to be a very full estimate.

It may be worth while to append these figures to my evidence, if not too late.

G. W. HEMANS.

SUGGESTION for TRANSFER of IRISH RAILWAYS to the GOVERNMENT.

	£		£
Ordinary shares paying dividend	11,088,663	Average of present rates, say 3½ per cent.	369,622
Preference shares paying dividend	2,868,534	Assumed rate, say 4 per cent.	114,741
Loans, total of	5,773,628	„ at 5 per cent.	288,681
Principal	19,730,825	Paying	773,044
Capital, not paying any dividend	5,985,181	To be reduced at 5*s.* in the pound to 1,496,295*l.*, at 3 per cent.	44,888
Total shares and loans	25,716,006	Annual interest charge	817,932
Floating debt taken at	2,000,000	Interest (see below)	62,500
			880,432
Total traffic receipts	1,581,606	Less 25 per cent. on account of concentration	1,186,205
Working expenses	750,530		562,898
	831,076	Net revenue	623,307
		Deficit	257,125
			880,432

	£
ANNUAL CHARGE to be provided for (deficit as above)	257,125
In either of the following ways :—	
Rateable property in Ireland, 12,897,131*l.* at 5*d.*	268,698
Arable land, 15,465,825 acres at 4*d.*	257,763
Addition to income tax at 3*d.* in the pound	261,114

APPENDIX DQ.

LETTER from Mr. W. MALCOMSON on IRISH RAILWAYS.

Mayfield Factory, Portlaw, Ireland,
November 26th, 1866.

TO HIS GRACE THE DUKE OF DEVONSHIRE.

THE Railway Commission over which your Grace has so diligently presided, and which, if it shall have answered no other end than that of drawing more general attention to the working of our railway system, with a view to making it more generally useful and advantageous to all classes, has done much good.

I must confess that for myself, and I feel sure it was so with many others, it seemed to be an inquiry that was likely to interfere and meddle too much with what might be considered to be within the rights of private enterprise; but the more I review the subject of railways in Ireland the more I am convinced that they should take their places more as undertakings of public interest than for private advantage, and that the earliest opportunity should be taken by the Government of obtaining possession and control of them, so as to make them as universally advantageous and useful to the public as they can be.

If we look at the early history of what are now called the public roads in Ireland, many of them must at first have been made to serve certain interests, and not for the general service of the community; then came turnpike trusts, by whom many of the main roads in Ireland were owned and kept in repair; and lastly, the counties have superseded these, removing all turnpikes, giving the public the benefit of freer communication, providing for the repairs of those roads out of the county rates at a much less average cost than when owned and repaired by separate trusts, and providing for the intercourse of localities a much freer means of exchanging its traffic.

All of us who can remember the working of the two systems will acknowledge what an improvement the present one is; we have only to look upon Ireland as one large county, the present railway boards as so many turnpike trusts, and the Government taking upon it grand jury duties, arranging for taking up the various trust interests, and taxing the property and the measures of the whole of Ireland for a rate in aid until the working of a new system, having the lowest rate of charges as its basis, should inaugurate a time when, instead of a loss, the income from them should become a source of profit to the community.

Nor would the Government be without other precedents for this, in the supplying of water to towns, in the lighting, watching, &c., the principle of taking all property within certain limits which are supposed to partake of those advantages is recognized, and as railways are recognized as affording advantages to all classes of the community, there would seem to be justice in taxing all for their promotion and support.

We should not seek such assistance from the imperial legislature except in advancing funds for their purchase, and this we consider it would be its advantage to afford; everything that tends to the improvement of a country benefits the imperial exchequer from the increased excise returns from a thriving community; and I need not dwell on the other advantages which would result, and which will occur to any one who takes a comprehensive view of the advantages which cheap, expeditious, and frequent communications give to a community.

The Belgian government have, from their first introduction, kept the railways in their own hands; they are felt to be a general advantage to the country, and within the last few months they have made extraordinary reductions in their passenger fares, particularly for long journeys, with, I believe, satisfactory results.

The Government having purchased the railways, and fixed the rates for passengers and goods, could let the working of them in part or in the whole to companies, who would supply the rolling stock and work them, like the old coaching establishments under official inspection and control. Other details might be referred to, but I feel sure that all are capable of being arranged for, and localities which at present, from their local traffic not being sufficient, are not provided with railway accommodation would be provided for.

I remain, respectfully,
WILLIAM MALCOMSON.

APPENDIX DR.

LETTER from MR. BULLAR on RAILWAY LEGISLATION, &c.

Temple, December 21, 1866.

MY DEAR CAPTAIN GALTON,

PARLIAMENTARY legislation on the affairs of companies generally, but especially of railway companies, seems to need a thorough setting to rights. It appears to have been, during the last 35 years, proceeding more and more on a misapprehension of what are the proper functions of Parliament. Standing orders and standing order clauses, which fail to convince the reader that they are embodiments of absolute wisdom, have been devised to meet particular mischiefs, and have been made of general application, and a practice more rigid than the standing

orders prevails. If it had been intended to establish a system of "meddle and muddle" for the financial affairs of the companies, to make a futile endeavour to control the action of the money market, and to give a delusive semblance of security to "debentures" and "preferences," the objects could scarcely have been better attained.

There has been an affectation of limiting the amounts that companies may raise, at the same time that they are permitted to increase the amounts whenever they solicit an Act for authorizing them to raise more money. This permission could not, however, be withheld, because the original limit is fixed with a foregone conclusion that it must be transgressed.

A limit of the rate of dividend on preferential capital has been fixed arbitrarily and without any reference to the market value of money, and companies have often been saddled with what amounts to a higher rate of interest, because they have been obliged to dispose of their shares at a discount.

All guaranteed dividends have been forbidden, apparently because, on the occasion of one great fraud being perpetrated, the arrears of guaranteed dividend increased the losses occasioned by the fraud; and now the preferential dividend for a year is to be paid out of the year's profits only. The consequence is that, instead of a company raising what they want on 4 per cent. guaranteed dividend, they may have to pay 6 per cent. preferential dividend. The only consolation for the ordinary shareholders is, that if, in some year, the whole 6 per cent. cannot be paid, the preferential shareholders will be the losers: not a very bright consolation when the ordinary shareholders, owing to the mistaken kindness of the Legislature, lose every year by their wretched bargain 2 per cent.

The companies may not guarantee dividend, even temporarily, on any of their own preferential capital; but they are often expressly authorized to guarantee perpetual dividend on even the ordinary capital of other companies.

The companies are forbidden to pay, out of capital, dividend on any money called up on their shares: but they are authorized to pay, out of capital, interest on money paid in advance of calls; so that, by arranging to have all their capital paid up in advance of calls, which they lawfully may and sometimes do, they can pay out of capital what is the same as "dividend," although it is called "interest."

A Bill for authorizing the making of a railway may not contain any power to make a "lease" of the railway: but it may contain a power to make a "working agreement;" which, in law, is a lease. Parliament forbids a lease, as a lease, and authorizes a lease, as a working agreement, because it must be had; following the example of Buonaparte, who printed, on English-made paper, his Milan decrees prohibiting the use of English manufactures, because he could get no other paper for the purpose. *Necessitas non habet leges.*

Parliament ignores the common law, that when a company are incorporated, and are authorized to make a railway, one of their legal incidents is, that they may incur debts, valid both at law and in equity, to whatever amount is necessary for having the railway made; and that this lawful power of incurring debt is not restricted by the limit of the amount which they are expressly authorized to raise on shares and debentures.

Thus, if a company are incorporated for making a railway and are authorized to raise for the purpose 600,000*l.* on shares, and 200,000*l.* on debentures, they may lawfully bind themselves to pay to a contractor 1,200,000*l.* for making the railway; and when they have paid to him every pound that they can raise, and are still in debt to him 400,000*l.*, that is as lawful and valid a debt as their 200,000*l.* debenture debt.

But if the company, not having the wherewithal to pay any part of the 400,000*l.* until Parliament enables them to raise it by preferential capital, give to him 80 separate acknowledgments under their common seal that they owe him 5,000*l.*, so as to enable him to raise money on them in the mesne time, Parliament is seized with a pious horror at the iniquity committed by the company in thus issuing "Lloyd's bonds."

Parliament also ignores the common law that two or more affirmative propositions may stand together; and in one recent case the consequence was, that a railway company which had complied with the latest enactment, intended by Parliament to supersede those which had gone before, found themselves liable to penalties exceeding 5,000,000*l.* In this case Parliament, of course, readily rectified its error by expressly repealing the earlier enactments.

But Parliament is not always so tender with involuntary error.

A large railway company, misreading one of their Acts of Parliament, created 700,000*l.* preferential capital, when their power was to create it only as ordinary capital. As soon as they found out their mistake they applied to Parliament to legalize what they had done, and Parliament did so; but only on the condition that they should, during 700 years, redeem yearly out of their profits 1,000*l.* of the peccant stock: so that at the end of seven centuries all evidence that the company's secretary had misconstrued half a dozen words in an Act of Parliament should be wiped out and the company should be restored to their pristine purity.

Parliament professes to act on the principle that a man shall not be deprived of his property without being fully compensated for it, and applies the principle thus:

Mr. Brown has invested 5,000*l.* in a little estate in the country, to which he retires. Mr. Jones has invested 5,000*l.* in preferential stock, part of a total of 1,000,000*l.*

Parliament compels Mr. Brown to allow a railway to be made through his land on an embankment 30 feet high and within 50 yards of his front windows.

The railway company propose to their preferential stockholders a financial scheme of advantage to the company and to all classes of their shareholders, but which requires the concurrence of every preferential stockholder. All but Mr. Jones consider it to be to their advantage, and agree to it. Mr. Jones "under advice" stands out on his 5,000*l.* and Parliament refuses to coerce him in the matter.

Parliament grants compulsory powers over Mr. Brown's land, and forces him to take, as compensation, whatever 12 jurymen, in an under sheriff's court, no one of them necessarily having an acre of land of his own, think to be proper; but they will not put any compulsion on Mr. Jones and make him take for his 5,000*l.* stock what the holders of 995,000*l.* stock, all in the same interest with himself, consider to be for their common benefit.

Mr. Jones therefore has to be bought off by paying to him 50*l.* premium and his costs: by which means Messrs. Quirk and Co., under whose disinterested advice he stood out, pocket 416*l.* 6*s.* 8*d.*

Three-fifths of ordinary shareholders can overrule the minority of two-fifths, and if a large majority, say nine-tenths, of debenture holders, preferential shareholders, or any other class with like interests, could overrule the minority of one-tenth, a heavy blow and a great discouragement would most properly be given to the pettifogging manufacturers of costs.

The holders of debentures and preferential stock seem in some respects to be regarded as the sacred castes, and landowners and ordinary shareholders as the pariahs, of the railway world.

A railway company with 1,000 miles of railway may make their own traffic arrangements over the whole of their system; but if they want to extend the arrangements over five miles of railway belonging to another company, anxious for the extension, they must submit the details to be overhauled by a Parliamentary Committee, perhaps entirely innocent of all knowledge of traffic arrangements; while, if they ask to amalgamate the five miles with the 1,000, not a question is asked as to what their traffic arrangements are, or are to be. The principle involved in this may be supposed to have been derived from the occult sciences.

The anomalies, the contradictions, and (nothing but my veneration for Parliament restrains me from adding) the absurdities of company legislation would fill a volume.

When Law's "Bubble" burst in 1720, Parliament, in its wisdom, determined that thenceforth for ever there should be no more of those infernal machines, joint-stock companies; and therefore (with trifling exceptions) the turnpike roads, docks, canals, &c. were, during the century following, made by money raised chiefly on bonds. When the Bubble Act had done its work for 100 years it was repealed, and then Parliament went off on another tack, and resolved that only one-fourth of the money that was wanted for an undertaking should be raised on debentures.

Parliament evidently saw that some deep principle was involved in that one-fourth, although the world at large has been as much puzzled by it as by the principle on which (according to the Dublin Professor) "Cæsar quartered Gaul "into three halves."

This recondite principle has, however, been rigidly adhered to. The Stockton and Darlington Railway Company, managed by very able, prudent and long-headed men of business, by their admirable financial regulations set an excellent example to all junior railway companies; for they paid the interest on their debentures, and nearly 10 per cent. dividends on their capital. Their debenture holders and their shareholders were perfectly satisfied; but Parliament knew what was good for them better than they did themselves, and, because the debenture debt exceeded the magic one-fourth, compelled the company to redeem the excess by shares.

If any practical good came from this meddling with

the financial affairs of companies, it might be tolerable; but Parliament cannot, by standing order clauses, raise the market value of stock, shares or debentures, except fictitiously. Mr. Vansittart's celebrated resolution, "That a "one pound note and a shilling were equal in value to a "golden guinea," deluded no one into selling a golden guinea for less than 27*s.*; but the safeguards which Parliament has affected to provide for the holders of debentures and preferential shares have deluded many into giving 20*s.* for what was not worth 1*l.*

It is true that the object of Parliament has, in many cases, been frustrated by the action, more or less illegal, of companies; but where the attainment of an object depends on what is beyond the control of Parliament, it is at the best inexpedient to act as if its attainment were certain.

Some of the parliamentary regulations cannot be complied with.

For instance, five years are allowed to a railway company to complete a branch line, and at the end of the five years their powers to make it are to cease, except as to so much of it as is then completed.

Then Parliament enacts that if it is not completed by the end of the five years the company shall pay a penalty of 50*l.* a day until they complete the line, unless the Board of Trade certify that the non-completion was occasioned by circumstances beyond their control; the want of money (but this was altered at the end of the last session) not to be considered a matter beyond their control!

Now, as a rule, nothing but the want of money prevents a line being completed in due time. The five years expire; the line is incomplete; and the company find themselves obliged, in order to incur as few days' penalty as may be, to raise the money as they can, legally or illegally, and to go on with the works in spite of their powers to complete the line having expired.

Parliament ought to leave companies at entire liberty to raise whatever money they think fit, in whatever manner they think fit. There would, doubtless, be many cases in which gullible investers would lose their money; but it may be doubted whether the aggregate of loss would be nearly as great as under the present system: and it is probable that, after a time, military and naval officers, clergymen, and widows and spinsters (who form the three great classes of contributories to companies which have to submit to be wound up) would learn to take more care of their money than they now do. Men and women cannot be protected against their own imprudence; but, on the other hand, they ought not to be misled by the assumption that Parliament can regulate the value of money and money's worth—the assumption which influenced Jack Cade when he proposed, with a prophetic eye to the legislation of 1863, to enact that "seven halfpenny loaves should be sold for a penny." Could Jack Cade have imagined anything more thoroughly to his heart's content than the enactments of the Companies Clauses Act, 1863: that preferential dividends should not exceed 5 per cent., and should be paid out of the yearly profits only; and that new shares or stock should never be disposed of by the company below par?

Parliament ought not to confer on a company authority to make a railway without a sufficient guarantee that the capital requisite for making it would be forthcoming.

Parliament has tried to secure this by means of subscription contracts, and deposits, which have failed of the desired effect; and it would be well that they should now try another plan.

Prohibit the company from taking any land by compulsion until they have paid up and invested, in the names of trustees, all the money reasonably estimated to be necessary for paying for all the land that they require, either for the whole line or for a sufficient section of it, and prohibit them from beginning any part of their works until, by compulsion or agreement, they have acquired the land, and have paid for all that they take compulsorily or from tenants for life or trustees.

Those would be reasonable prohibitions, which, while adequately protecting the landowners and the public, would not prevent the making of any railway which was really needed, and would choke off all merely speculative lines.

A few amendments of the Companies and Lands and Railways Clauses Acts, and of some of the General Railway Acts, and the disuse of some standing order clauses would be sufficient, and the labours of parliamentary committees would be lightened. Those labours must, in some cases, be far more severe than the public imagine, for what mental process could be more painful than that of a member of a committee, sitting in judgment on a railway traffic arrangement and honestly trying to do his duty, who, after several days' sitting asked a friend, privately, "What are *through rates*, about which they have "been saying so much?" Fancy the worthy man having to decide whether it was proper that there should be "through "rates and through booking and clearing-house terminals "with equal mileage division, excluding terminals, except "station to station terminals," or any other proposal couched in equally precise railway slang.

But if companies are to have unlimited freedom of action in the money market, it will be requisite to subject their directors to such checks as might deter those among them whose perception of their duty to their neighbour is somewhat hazy from perpetrating what honest men might, however censoriously, consider to be frauds.

Every prospectus, report or statement of accounts ought to be as absolutely free from *suppressio veri* as from *suggestio falsi*, and better provision than now exists ought to be made for rendering directors civilly and criminally responsible for every misleading statement published with their apparent sanction.

They ought to be puuishable, not only for a wrong done with their cognizance, but also for a wrong the doing of which their official position ought to have enabled them to prevent, or which, not being absolutely preventible by them, they did not usè their best endeavours to prevent, and did not denounce with sufficient publicity so soon as they found those endeavours ineffectual.

To judge from the past, no director is practically punishable for any misleading statement unless it be of so gross a character as to shock a rogue.

What some tough-conscienced but useful directors seem to need is, that practical experience of the discomforts consequent on evil doing that led the factor to say to his son on his setting up in business for himself, "Sandy, my boy, "honesty *is* the best policy:—for I've tried both."

Why should not Parliament prescribe a well-considered form in which every railway company should publish their half-yearly accounts? not an account framed on the double entry plan of professional accountants, which, however intelligible to them, is caviare to the vulgar, but an account framed on the Chancery system of "charge and discharge," the only system which excludes "quartering" as well as "cooking" accounts, and is readily comprehensible by the hundreds of thousands of shareholders whose facile acquaintance with arithmetic does not embrace the rule of three.

It ought not to be possible that a half-yearly account of a great railway company should give only the balance of a country agent's account, so that (for instance) instead of there appearing on one side "legal expenses, 4,800*l.*," and on the other side "sale of superfluous land, 4,600*l.*," there should appear on one side only, "legal expenses 200*l.*" Nor, on the other hand, should it be possible to smuggle payments to compromise oppositions in Parliament into "legal expenses."

But pray do not misunderstand me as intending to insinuate that fraud is the rule in railway affairs. On the contrary, I believe that it is the exception, and, considering the magnitude of the railway system, that the per-centage of official dishonesty is really small.

A fraud involving a million attracts public attention, while no notice is taken of the contemporaneous honesty in dealing with a hundred millions.

Parliament is to blame for there being much laxity of practice in complying with statutory requirements, because it enacts much that is contrary to that rare commodity, common sense, and so forces companies to contrive how, without directly contravening the statute law, they can so avail themselves of their common law rights as to reconcile a due attention to their own interests with the least possible attention to the restrictions which are imposed on them by "the wisdom of Parliament."

It might also be well to relieve the Board of Trade of the necessity of making their reports on Bills, the chief use of which now seems to be to keep alive the memory of some antiquated reports of forgotten committees which sat on railway affairs years ago.

It would also be well that the Board of Trade's yearly report on railways, instead of giving figures which are, in one respect, misleading by tens of millions, should, if possible, give figures more nearly to be relied on.

It appears by their reports that railway capital consists of so many millions, and railway debenture debt of so many millions more, and that the yearly railway earnings are other millions. So much of the earnings as are divisible profits is compared by the reader of the reports with the aggregate of the capital and debt, and the inference drawn is that railways are by no means a very good investment, because they do not seem to pay on the average more than some four and a quarter per cent. on the outlay upon them.

But this is the percentage on the nominal amount of the capital and debt together, and not the per-centage on the money which the original shareholders and debenture

holders paid to the companies for their shares and debentures.

It is impossible to ascertain, with entire accuracy, the amount of the money which was so paid; but some approach towards accuracy might be made.

This, however, is not attempted by the Board of Trade; the excuse given, as I was told, by one President of the Board for not trying to get at the truth being, that "it "would offend the railway boards."

The cases are multitudinous in which shares and debentures have been issued at a discount, either directly to the public, or, in the first instance, to contractors or other creditors, who then disposed of them to the public for what they could get, and in many cases the contract sum has been proportionately raised in order to induce a contractor to take, at par, shares which he could dispose of only at a discount.

It may be said that this is not done by any of the large companies in good credit; but their accounts are, more or less, affected by it, because the additions made to their capital and debenture debt, when they amalgamate smaller undertakings with their own, are made at the nominal amounts, without any regard to the discounts at which they were issued.

Some approach to the truth might be made by ascertaining what were the earliest "quotations"; but the devices to conceal discounts have been many and ingenious. Some years ago a 1,000*l.* 5 per cent. debenture of one of the large companies was offered for 900*l.*, and on its being objected that this was issuing a debenture "at a discount," it was replied that "the company issued it at par, but "would allow 10 per cent. commission for taking it."

From what I have been able to learn, I have come to the conclusion that the amount which railway companies pay, as interest on their debenture debt, Lloyd's bonds, and other debts bearing interest, and as dividend on their capital, is equal to 5½ per cent. on the money invested by the public in railways.

Railways are better than docks, for the average return on the total capital invested in docks is, I believe, about 4½ per cent.; and far worse than canals, which, I understand, yield an average of about 15 per cent. on the whole money invested in them.

There are railway matters to which Parliament does not now pay attention on which they properly might legislate. All matters relating to stations on railways are left to the companies, because a station is, technically, not part of the railway. The consequence is, that in many cases station accommodation is inefficient, and what exists is bad.

Where there is, within a given radius from a convenient point on a railway, a given population, the company ought to be compellable by order of the Board of Trade to provide there adequate station accommodation for passengers and goods, and, when necessary, to extend it.

A standing order clause to this effect would be sensible and of value to the public.

Again, a railway company ought to be compelled to book and invoice over their whole system, and with a proper maximum for their charges.

Where the interests of the public are directly concerned Parliament ought to be more careful of details than it now is; but in matters which parliamentary committees can scarcely understand it would be better that it should give more freedom to companies than it now does, as, for instance, in traffic and working agreements.

There is wanted some more effectual official control over railway companies than the Board of Trade and the Court of Common Pleas now have; some officer in, or distinct from, that Board, who should be a good railway man of business, acquainted with the details of engineering and traffic arrangements, and who should have such assistants as he required and chose for himself. Many of the powers, with respect to traffic, which were lately conferred on the Court of Common Pleas might, with advantage, be transferred to him; for the expense of applying to a court of law is often a protection to abuses.

If it were objected that this would be to deprive the subject of the protection of Her Majesty's judges, it might be replied that this protection is not needed in railway affairs, seeing that the clearing house, with general satisfaction to its suitors, decides, in a year, more points of law and matters of fact than (if litigated) all the courts and juries in Westminster Hall could, with their present mode of procedure, decide in several years, and at 99 per cent. (at least) less cost.

You will quite understand that I am objecting only to the system which is now in force. The code for railway companies which is embodied in the Companies, Lands, and Railways Clauses Acts entitles their authors, Messrs. Palk, Booth, and Bethune, to the highest credit as draughtsmen, and it is impossible to overestimate or too much to admire the single-minded honesty of purpose, and indefatigable laborious painstaking with which the system has been officially carried into effect; but a system which is based on false principles can never work out truthful results, and the present depreciation of the market price of all railway stocks and securities is conclusive evidence that "parliamentary security" in railway affairs has been tried and found unsubstantial.

Sir Robert Peel talked of "the sweet security of the "3 per cents.," but Acts of Parliament, backed up by even the Consolidated Fund of the United Kingdom, cannot protect fundholders against having to sell at 89 Consols which they bought at 98.

The great mistake in the Railway Clauses Act is the mistake of permitting a railway company to be carriers on their own railway; so that the company combine in themselves the antagonistic functions of turnpike road trustees and stage coach proprietors. It is to this mistake that non-paying branches and unclosed capital accounts are chiefly owing: and I doubt whether railway companies will ever be freed from financial embarrassments until they are divided into companies owning their railways and taking tolls for trains running on them, and companies owning and running the trains, paying the tolls, and taking the fares, rates, and charges for the traffic which they carry.

Yours very sincerely,

JOHN BULLAR.

Captain Douglas Galton, F.R.S.,
&c. &c. &c.

Appendix DS.

Schedule of Tolls and Charges authorized in the Railway Construction Facilities Act, 27 & 28 Vict. c. 121.

1845-5

Table I.

Maximum Charges for Use of Railway and Supply of Carriages, Waggons, or Trucks.

	For Use of Railway, per Mile.	For Supply of Carriage, Waggon, or Truck by the Proprietors of the Railway, the additional Sum per Mile of
Passengers :—		
For every person - -	Twopence.	One penny.
Animals :—		
For every horse, ass, mule, or other beast of draught or burden (Class 1.) - -	Threepence.	One penny.
For every ox, cow, bull, or head of neat cattle (Class 2.)	Twopence.	One penny.
For every calf, pig, sheep, lamb, and other small animal (Class 3.) - -	Three farthings.	One farthing.
Goods (except as provided for in Table IV.) :—		
For cotton and other wools, manufactured goods, drugs, fish, and all other wares, merchandise, articles, matters, or things not enumerated in any other class (Class 4.) - per ton	Threepence.	One penny.
For sugar, grain, corn, flour, hides, dyewoods, earthenware, timber, staves, deals, and metals (except iron), nails, anvils, vices, chains, and light iron castings (Class 5.) - - per ton	Twopence halfpenny.	One penny.
For coke, charcoal, pig iron, bar iron, rod iron, sheet iron, hoop iron, plates of iron, wrought iron, heavy iron castings, railway chains, slabs, billets, and rolled iron, lime, bricks, tiles, slates, salt, fireclay, and stone (Class 6.) per ton	Three halfpence.	One penny.
For dung, compost, manure, undressed material for repair of public roads or highways, coals, culm, cinders, cannel, ironstone, iron ore, limestone, clay (except fireclay), chalk, sand, and slag (Class 7.) - - per ton	Five farthings.	One halfpenny.
For every carriage of whatever description conveyed on a truck or platform belonging to the proprietors of the railway (Class 8.) :		
If not weighing more than one ton - -	Sixpence.	
If weighing more than one ton, then for the first ton	Sixpence.	
And for every additional quarter of a ton, or fractional part of a quarter of a ton, above the first ton - - -	Three halfpence.	

Table II.

Maximum Charges for Supply of Locomotive Power.

For the use of engines for propelling carriages on the railway : For every passenger, animal, and ton of goods - - per mile	One penny.

Table III.

Maximum total Charges for Use of Railway and Supply of Carriages, Waggons, or Trucks, and Supply of Locomotive Power, and every other Expense incidental to Conveyance of Passengers, Animals, or Goods along the Railway.

Passengers :—	Per Mile.
For every person conveyed in a first-class carriage. - - -	Threepence.
For every person conveyed in a second-class carriage - - - -	Twopence.
For every person conveyed in a third-class carriage - - -	Five farthings.
Animals :—	
For every animal in Class 1. - -	Fourpence.
,, Class 2. - -	Threepence.
,, Class 3. - -	Three halfpence.
Goods :—	
For every thing in Class 4. - per ton	Fourpence.
,, Class 5. - per ton	Threepence.
,, Class 6. - per ton	Twopence.
,, Class 7. - per ton	Three halfpence.
For every carriage in Class 8. - -	The charge specified in Table I.

Table IV.

Maximum Charges for small Packages and single Articles of great Weight.

Small packages :—	
For every parcel not exceeding seven pounds in weight -	Sixpence.
,, exceeding seven pounds, but not exceeding fourteen pounds in weight -	Eightpence.
,, exceeding fourteen pounds, but not exceeding twenty-eight pounds in weight - -	One shilling.
,, exceeding twenty-eight pounds, but not exceeding fifty-six pounds, in weight - -	One shilling and threepence.
,, exceeding fifty-six pounds, but not exceeding five hundred pounds, in weight, for the first fifty-six pounds - -	One shilling.
And for every additional fifty-six pounds, or fractional part of fifty-six pounds, above the first fifty-six pounds -	Sixpence.
Single articles of great weight :—	
For every boiler, cylinder, or single piece of machinery, timber, or stone, or other single article :	
If weighing (inclusive of the carriage) more than four, but not more than eight tons, sixpence per ton per mile.	
If weighing (inclusive of the carriage) more than eight tons, such sum as the proprietors of the railway think fit.	

Regulations.

Short-distance Charge.

1. For passengers, animals, or goods conveyed on the railway for a distance less than that prescribed in the certificate as the short distance, and if none is prescribed then for a distance less than six miles, charges are to be payable as for the short distance prescribed, and if none is prescribed then as for six miles.

Fraction of Mile; Passengers.

2. In respect of passengers, every fraction of a mile beyond an integral number of miles is to be deemed a mile.

Fraction of Mile; Animals and Goods.

3. In respect of animals and goods, for a fraction of a mile beyond the short distance prescribed, or if none is prescribed then beyond six miles, or beyond any greater number of miles, charges are to be payable in proportion to the number of quarters of a mile contained in that fraction; and a fraction of a quarter of a mile is to be deemed a quarter of a mile.

Fraction of Ton.

4. For a fraction of a ton charges are to be payable according to the number of quarters of a ton in that fraction; and a fraction of a quarter of a ton is to be deemed a quarter of a ton.

Passengers' Luggage.

5. Every passenger travelling on the railway, may, without charge, cause to be carried in the same train with him his ordinary luggage, not exceeding the weight prescribed in the certificate, and if none is prescribed then not exceeding the weight of one hundred and twenty pounds for a first-class passenger, one hundred pounds for a second-class passenger, and sixty pounds for a third-class passenger.

Special Trains.

6. The restriction as to charges for passengers does not extend to special trains when required by passengers, but applies only to the ordinary or express passenger or goods trains appointed by the proprietors of the railway.

Determination of Weight.

7. Except as to stone and timber, weight is to be determined according to avoirdupois weight.

Fourteen cubic feet of stone, and forty cubic feet of oak, mahogany, teak, beech, or ash, and fifty cubic feet of any other timber, are to be deemed one ton, and so in proportion for any smaller quantity.

Terminal Station Charges.

8. In addition to the charges in Table III., a reasonable charge is to be payable for the loading, covering, and unloading of goods at any station, being a terminal station in respect of such goods, and for delivery and collection, and any other services incidental to the duty or business of a carrier, where such services, or any of them, are or is performed by the proprietors of the railway.

A station is not to be considered a terminal station in respect of goods, unless they are received there direct from the consignor, or are directed to be delivered there to the consignee.

Small Packages.

9. The term small packages does not include articles sent in large aggregate quantities, although made up of separate parcels, such as bags of sugar, coffee, meal, and the like; but applies only to single parcels in separate packages.

Agreement for higher Charges.

10. Nothing herein or in the certificate contained is to prevent the proprietors of the railway from taking any charge over and above the charges herein-before limited for the conveyance of goods of any description by agreement with the owners of or any persons in charge of such goods, either in respect of the conveyance thereof (except small packages) by passenger trains, or by reason of any other special service performed by the proprietors of the railway in relation thereto.

Appendix DT.

Further Information from Mr. Mulvany in regard to German Railways.

Westminster Palace Hotel,
30th January 1867.

My dear Sir,

In reference to my communication of the 6th November last * as to the assistance furnished by the State in Prussia to railways and to a note I made on the table of "Prussian railways, 1863," to the effect that "the results "from 1863 up to the present time were still more favour-"able," I beg to inform you I have received within the last few days a copy of the Berlin "Boersen Zeitung," in which the number of miles opened for traffic in the kingdom of Prussia up to the end of 1866 is stated, and it exhibits such an extraordinary increase in the three years 1864, 1865, 1866, as compared with the results tabulated by me from the statistics up to the end of 1863, and shows how well the system and policy of the Prussian railways are working, that it cannot fail to be interesting to your Commission, and I therefore furnish it to you in the subjoined table:—

Prussian Railways open for Traffic.

	Length in English Miles up to	
	End of 1863.	End of 1866.
Class I.—Railways constructed and managed by the State -	950	1,890
Class II.—Private railways managed by the State - -	876½	966
Class III.—Private railways managed by the companies -	1,948½	3,010
Total Miles, English -	3,775	5,866
Total Cost - - £	63,467,043	96,750,000
Average Cost per Mile, English £	16,812	16,493

In addition to these railways, then open to traffic, the Berlin paper referred to enumerates many others the works of which are in progress, and, still further, many projected and intended to commence this year.

The contrast with Great Britain and Ireland is remarkable. Taking from the "Times" of 20th December last the abstract from the Returns of the Board of Trade Returns for 1865, it appears there were in—

		English miles.
England, Wales, Scotland, and Ireland.	Double lines -	7,503
	Single lines -	5,786
	Total -	13,289

which cost 456,421,000*l.*, or an average price per mile of 34,345*l.*

It may also be interesting to add that the coal trade from Westphalia to Paris to which I referred in my evidence as possible, and which appeared rather to excite doubts, is now, by the facilities afforded by reduction of railway fares and united action on the part of Prussian, Belgian, and French railway companies, an accomplished fact.

I am therefore more than ever convinced that the coal trade I proposed from England through Dublin and other eastern ports of Ireland to the interior of Ireland can be effected on the terms I mentioned, if suitable facilities be afforded, with great profit and advantage to the railways and the country.

Dear Sir,
Yours truly,
Wm. T. Mulvany.

Wm. Pole, Esq.,
Secretary,
Royal Railway Commission,
House of Lords.

* See Appendix DK.

Appendix DV.

Reply by Mr. Bullar to the Remarks of the London and South-western Railway in Appendix DE.

The "remarks" upon my "statements" which have been signed by Mr. Frederick Clarke cannot have been made by him as of his own knowledge, but must have been prepared for his signature, so that it is an unknown writer to some of whose rash assertions as to matters of fact I am compelled to give a direct negative.

The "remarks" as a whole are a valuable testimony in favour of what I have urged— the necessity of official interference, in the interest of the public, with railway management—for the writer seems to have no idea but that the first thing to be considered is the convenience of his company, and the last the convenience of the public.

Railway companies are great monopolists, established for the benefit, in the first instance, of the public; and what the public need is that the natural tendency of monopolists to abuse their power shall be subjected to some wholesome restraint.

The case that is attempted to be made in favour of the company proves the necessity for the suggested interference of the Board of Trade.

It appears by the "remarks" that in the beginning of the year 1859 the directors admitted the necessity of enlarging the Putney station; that for divers causes, altogether beyond the control of the passengers on the railway, the company postponed from time to time the execution of the works, and that it was not till after May 1864 that (the directors being "ultimately compelled" to go on) the enlargement was made.

For more than five years the Putney station was inconveniently, and for a great part of that time was dangerously, overcrowded. It was not until the end of five years after the necessity for enlarging the station had been admitted by the Board that they yielded to what they felt to be "ultimate compulsion." Can there be a doubt that if the Board of Trade could have interfered the compulsion would have been operative at a much earlier period?

The author of the "remarks" omits from his narrative one fact, which I will supply.

The passengers by the railway were exposed to so much danger at the station that they felt that there was a daily risk of a fatal accident. Their respectful representations to the Board had failed to produce any satisfactory effect, and therefore, at last, a letter was written to the chairman of the company, giving him formal notice that the station was dangerously overcrowded; that gentlemen at Putney had determined that if the overcrowding led to a loss of life they would have all the directors indicted for manslaughter; that subscriptions for defraying the expense of the prosecution had been promised; and that the letter would be given in evidence on the prosecution.

To the assertions (1) that "no accommodation for "heavy goods traffic exists *or ever did exist* at Putney"; and (2) that "Putney being a suburb of London, and only "four or five miles from the goods station at Nine Elms, "it is *certain that no goods traffic* with London would *ever* "be conveyed by railway;" and (3) that "no heavy "goods traffic has *ever* been carried on at Putney station;" and (4) that the hay for me "was *invoiced from Bishopstoke* "*to Nine Elms* for Mr. Bullar, and not invoiced through "to Putney as he states," I give the most direct, absolute and unqualified contradiction.

(1.) Some years ago apparatus for hoisting and lowering heavy goods was set up and used at the Putney station. It was ill contrived, and was soon removed, because it increased the labour of moving the goods.

(2.) Tons of potatoes, iron tanks, iron guttering and other heavy goods have, within the last few months, been conveyed by railway from London to Putney; and the refusal to land heavy goods at Putney (compelling the consignees to pay for two miles and a half of extra cartage through their being sent on to Barnes) is a frequent grievance. The interests of the public require that the Putney station should be adapted to goods traffic, and therefore that the Board of Trade should have power to order the requisite accommodation to be provided. The company want to be the judge in their own case. The public want an independent tribunal.

(3.) Heavy goods traffic has within my own observation been carried on at Putney station from early in 1849 to the present year; capriciously, it is true; sometimes being permitted and sometimes being refused. For several years all the hay that I had up from Bishopstoke was delivered at Putney.

(4.) The hay in May 1865 *was invoiced through from Bishopstoke to Putney*, and not from Bishopstoke to Nine Elms. The best evidence of this fact would be the "delivery note," which was sent to me from Nine Elms, and was given up there in exchange for the hay. I have asked the company to produce it, and I am told in reply that "it is not in existence; all such documents being "destroyed after the delivery of the goods to which they "refer." There could scarcely be a more objectionable practice than the practice of systematically destroying the written evidence, in some cases the only evidence which could be produced on any question respecting the propriety of the company's charges. But, happily, two most respectable persons through whose hands the delivery note passed confirm my recollection of it by the positive assurance that "it was to Putney;" and, as the primary evidence has been made away with, secondary evidence is admitted.

JOHN BULLAR.

Temple, January 31, 1867.

Appendix DW.

Extract from the Report of the Committee of Investigation on the Accounts of the London, Chatham, and Dover Railway, appointed 31st August 1866.

It will be seen from the accounts of the several sections set forth in the subsequent part of this report that the nominal amount of the capital of the company is very largely in excess of the amount which has actually been received by the company and expended upon the railways. This arises not only from a large part of the stocks, shares, and debentures having been issued at a discount, but also from the fact that large amounts have been charged to capital account for interest and commission. The aggregate expenditure of all the sections on capital account has been for land, compensation, works, rolling stock, steam ships, engineering, parliamentary and legal expenses, &c. - - - - £10,625,498 7 3

The interest on debentures and temporary loans and dividends on shares, charged to capital account, with the deficiencies on revenue accounts, amount to £1,948,007 16 3

And the rebate and loss on share and loan capital to - - 4,109,796 8 0

Brought forward -		£10,625,498 7 3
	6,057,804 4 3	
		£16,683,302 11 6

The nominal receipts on capital account have been—

Ordinary stock -	5,425,000 0 0	
Preference stock -	5,533,290 0 0	
Debentures -	4,295,230 9 0	
	15,253,520 9 0	

Showing an excess of expenditure over receipts of - - £1,429,782 2 6

Appendix DX.

Complaints from the South of Scotland Chamber of Commerce as to Delays in Delivery of Goods by Railway.

South of Scotland Chamber of Commerce,
Hawick, 5th November 1866.

Sir,

I now forward you particulars of delays in transmission of goods supplied by members of our Chamber as under:—

Laing & Irvine, Hawick.
John Laing Do.
Wm. Laidlaw & Sons, Do.
H. Ballantyne & Sons, Walkerburn.
A. Byers & Son, Langholm.
J. Bowman & Son, Do.
Sime Sanderson & Co., Galashiels.
Brown Brothers Do.
Bogue & Co. Do.
Thomas Ovens Do.
J. & H. Brown & Co., Selkirk.

You will notice that some of the cases specified are of a very aggravated character, and subject the mercantile firms in our district not only to much trouble and inconvenience, but often to very serious loss. The carriers' waggons were, in fact, quite as expeditious, and far more certain in delivering goods.

We are aware that these delays may be the misfortune more than the fault of the North British Railway Company, as opposing companies at Carlisle place as many obstacles in their way as possible; but if the delays can be attributed to such means it is to be hoped the Commission will so report on them that Parliament will deal promptly with such an evil.

If the enclosed documents are received by the Commission as evidence, you will of course retain them. If our witness is required to testify to them, please return them at your convenience.

Yours, &c.
Thomas Cathrae,
Secretary.

W. Pole, Esq.,
Secretary,
Royal Commission on Railways.

Galashiels,
26th October 1866.

Dear Sir,

I am glad to see something is likely to be done regarding the detention of goods in transit by railway.

If anything can be done to ensure a speedier delivery it will be a great boon to the public, and I am persuaded, a greater still to railway companies, if an immediate clearance could be accomplished.

I will mention some of the grievances for detention I have to complain of, which have occurred within the last few weeks, and will confine them to parcels sent to represent stock to complete a sale. If you think they are to the point and worth noticing you can do so, or otherwise, as you think proper.

In September last a parcel of rape cakes was despatched from Hull to represent 100 tons I had bought, but if samples were approved of I wished it extended to 300 tons.

The parcel was carriage paid, and up to this time, 26th October, it has not been delivered. The markets are now up 5*s.* per ton, and the offer cancelled.

On the 10th October I bought, through a broker in Hull, a cargo of linseed cakes at a price agreed upon, cost, freight, and insurance, but subject to approval or rejection on seeing three cakes taken from the bulk as a fair sample of the whole.

They were despatched by the North-eastern Railway from Hull on the 10th instant, but not delivered here until the 25th instant.

On the 17th October I bought 150 tons of guano from a ship discharging at London, sale to be confirmed on seeing sample bag from the bulk. Telegraphed to London for a sample bag, which was despatched by London and North-western Railway on the 17th, and only arrived here on the 24th inst.

I have enclosed the railway receipts which apply to the cases mentioned.

I am, &c.
Thomas Ovens.

Thomas Cathrae, Esq.,
Hawick.

North-eastern Railway.

Main Goods Station, Hull,
10th October 1866.

No. of Order.	From	To.	Goods.	Tons.	Cwts.	Qrs.	Lbs.
2575	AYRE BROTHERS.	Mr. T. Ovens, Galashiels.	1 Parcel Samples, Linseed Cakes.				

No. of Cakes.

Received the above.

London and North-western Railway.

Haydon Square Station,
17th October 1866.

Received from Messrs. Foley and Aikman, one bag, to be conveyed subject to the conditions on the back hereof, for J. Ovens, Esq., of Galashiels.

For the London and North-western Railway Co.
T. Barr.

Conditions on the back.

The London and North-western Railway Company give Public Notice,

That they will not be accountable for any articles, unless the same be signed for as received by their clerks or agents.

Nor will they be responsible for the loss of, or damage done to, money in cash, or bills, or promissory notes, or securities for money or jewellery, trinkets, rings, precious stones, bullion, gold and silver manufactured or unmanufactured, gold and silver plate or plated articles, clocks, watches, timepieces, marbles, lace, furs, silks in a manufactured or unmanufactured state, and whether wrought up or not wrought up with other materials, writings, title-deeds, prints, paintings, maps, engravings, pictures, stamps, or other valuables; nor for damage done to china, glass, wearing apparel, musical instruments, furniture, toys, castings, or any other such hazardous or brittle articles, in packages or otherwise, unless the same be declared as such, and insured according to their value, and paid for at the time of delivery to the company; nor for loss or damage arising from fire, the act of God, or civil commotion.

Nor for the loss of or damage done to goods put into returned wrappers or boxes, or packages described as empties; nor of any goods left until called for, or to order, or warehoused for the convenience of the parties to whom they belong, or by or to whom they are consigned.

Nor for the loss of or damage of any packages insufficiently or improperly packed, marked, directed, or described, or containing a variety of articles liable by breaking to damage each other, or other articles; nor for leakage arising from bad casks or bad cooperage, or for fermentation.

Nor for loss or damage as to any goods whatsoever, by reason of accidental or unavoidable delays in transit or otherwise.

Nor will they bind themselves to forward goods from any station by the first succeeding train; nor will they agree to send a waggon from one station to another with less than one ton.

Senders of any dangerous articles will be held accountable for any damage arising therefrom or thereto, unless the contents are described as such upon the direction, that due care may be observed in the loading; and in no case will the Company be liable for the loss of any such article; and the Company will not undertake the carriage of gunpowder, aquafortis, vitriol, ardent spirits, lucifer or congreve matches, on any terms whatever.

All goods, from whomsoever received, or to whomsoever belonging, are subject to a lien, not only for the freight of the particular goods, but also for any general balance that may be due from the owners, consignors, or consignees; and if, in fourteen days after the Company first received the goods, the money due be not paid, they will be sold by auction, and the proceeds applied towards satisfaction of such lien and expenses.

All goods will be subject to a charge for demurrage, if not removed from the Company's premises within twenty-four hours after arrival; and fish, fruit, meat, poultry, or other perishable articles, are conveyed at the owner's risk, and will be immediately sold to secure the freight, if it be not paid when such articles arrive at the railway terminus, or are offered for delivery.

No claim for loss or damage (for which the Company are accountable) will be allowed, unless made on the day of arrival of the goods; and the delivery of such goods will be considered as complete when the notice of arrival is rendered to the consignee; or, if carted out by the Company, when the goods are placed at the door of the consignee, or suspended to his crane-chains or tackle; the cellaring or warehousing afterwards will be at the owner's risk. Notwithstanding any period or periods of credit which, as a matter of convenience, the Company may allow, they hereby give notice that all charges for freight or carriage, or for conveyance, are due in cash on delivery or tender of the goods, waggons, or carriages.

All empties not taken away within one month after their arrival, will be sold by auction to defray expenses.

N.B.—The above conditions apply to all parcels and goods received by the Company at all their respective offices and warehouses, wheresoever situate.

24, High Street, Hull,
September 1866.

North-eastern Railway Company.

Deliver in good order and condition as received per Railway Rulley, 2 rape cakes.

Mr. Thos. Ovens, Galashiels.
Pro Ayre Brothers.

Carriage paid. (Signed) G. Meek.

Sir, Galashiels, 18th October 1866.

We beg to state that the following cases of undue delay in the transmission of goods between this and Yorkshire, have recently occurred in our own experience.

We are, &c.

To Thos. Cathrae. Bogue & Co.

1st. Wool sent from us to Messrs. Jas. Shaw & Co., Honley, Huddersfield, on the 2nd October, was delivered to them on the 16th.

2nd. Yarn sent from Messrs. Jas. Shaw & Co., Honley, Huddersfield, to us on the 3rd October was delivered on the 12th.

3rd. Yarn sent to us from the same parties on the 5th October was delivered on the 16th.

4th, Yarn sent from the same parties to us on the 10th was delivered on the 18th.

Buckholm Mill, Galashiels,
Sir, 22nd October 1866.

In reply to your circular we annex a few extracts from letters received from our customers in London complaining of the delay in the transit of goods. We could give you many more instances, as we have complaints every day, and as yet we have not been able to get any redress.

Yours, &c.
Brown Brothers.

29th Sept. Goods invoiced 27th Sept. not arrived evening of the 29th.

5th Oct. Goods invoiced 2nd Oct., delivered on the 5th.

20th Oct. Goods invoiced 17th, not delivered at 6 p.m. on the 20th.

20th Oct. Goods invoiced 18th, delivered evening of the 20th.

Mr. Cathrae, Secretary,
South of Scotland Chamber of Commerce.

Botany Mills, Galashiels,
Dear Sir, 22nd October 1866.

In reply to your communication of the 16th inst.; we beg to annex particulars of the last case of unnecessary delay on the part of the railway company.

Two sample bales of wool were invoiced from Huddersfield on the 6th October last, and we are assured both by the party sending the wool and the station agent at Huddersfield, that the wool was duly despatched from that station, but in the face of all our inquiries here and at the other end the wool was not delivered to us till the 16th of October, or 10 days after date of invoice.

We are, &c.
Sime Sanderson & Co.

Thomas Cathrae, Esq.,
Hawick.

Dear Sir, Langholm, 18th Oct. 1866.

In reply to yours we have reason, along with you, to complain of the delays in the transmission of goods; they are very frequent. Last case was a parcel sent from this on the 28th September to Durham, and it had not been received on Saturday last, and no satisfaction can be obtained as to where it has gone.

We hope something will come out of the inquiry of the Chamber as it is much needed.

Yours, &c.
Mr. Cathrae. J. Bowman & Son.

Dear Sir,

We are glad to see from your circular of 16th current, that some move is being made about the delays on railways; really they are endless. Our complaints are numerous and vexatious, but on account of the trouble of getting recompense we often allow them to pass. The above are a very few only, and we do hope some amendment will be made. We intend looking after them more strictly in future, as we never get the amount of loss.

Yours, &c.
Mr. Thos. Cathrae, Andrew Byers & Son.
Secretary,
South of Scotland Chamber of
Commerce, Hawick.

8, Slitrig Crescent, Hawick
Sir, 19th October 1866.

I am in receipt of your circular respecting the delay in delivering goods from the Midland Counties. I receive a regular supply of yarns from Nottingham. The usual time on the way is five days, and six days when Sunday comes in, which includes the days of receiving and delivering, or three clear days on the way. The passenger trains over the same ground occupy eight hours and ten minutes.

The delay is often very much against me in executing orders.

Yours, &c.
Mr. Thomas Cathrae, John Laing.
Secretary,
South of Scotland Chamber
of Commerce.

Memorandum from William Laidlaw & Sons to Mr. Thomas Cathrae.

Teviot Crescent and Lynnwood Mills,
Hawick, 25th Oct. 1866.

On 12th October we delivered a truss to the railway company, addressed to Ironbridge, Wilts, and we are to-day advised by our customer that he only received it on 23rd, having thus been 11 days on the road. This is a very glaring case of delay; and the last goods we sent to the same party were also delayed in transit about the same time.

Messrs. Laidlaw further advise me of goods sent to Leeds on 25th October, and which had not arrived there on the 29th, the station agent informing the party expecting them that he had heard nothing of them. The goods would be countermanded if not forwarded immediately.

Thomas Cathrae.

Tweed Vale Mills, near Innerleithen,
25th Oct. 1866.

DEAR SIR,

IN reply to your circular letter of the 16th inst., regarding the delay caused to goods in transmission to and from Yorkshire, &c., we beg to annex you three cases which occurred with us lately, and which we hereby testify are correct. We may add, that these are not exceptional cases, but only fair samples of the time goods take in transit.

The delays with us are most vexatious and inconvenient in almost every case.

Yours, &c.
H. BALLANTYNE & SONS.

Thomas Cathrae, Esq.,

1 bale tweeds	Ditto	Ditto	Oct. 15.	Oct. 25.	10 „

DEAR SIR, Hawick, 18 Oct. 1866.

IN reply to yours of the 16th inst, we have the following complaints against the North British Railway Company for delay in transmission of our goods:—

1st. On 13 Oct. 1865 we sent a parcel to Leeds, but which the party returned to the railway company to be sent back to us. They kept it lying about their warehouse, and we did not receive it till 21 Dec. 1865.

2d. On 23 Feb. 1866 we sent a bale to Cork, and had a letter from our customer, dated 10th March, stating that it had not then reached him.

3d. On 16 March 1866 we sent a bale to Huddersfield, and which was only offered on the 23d to our customer. He refused to take it in, owing to the delay in being forwarded, and had to ship his other goods as he could wait no longer for ours. He gave the railway company at the time our address, but we understand it is still lying at Huddersfield station.

4th. On the 2d inst. we sent a bale to Manchester, and had a letter from our customer stating it was not delivered on the 5th. On making inquiry at the station here, we found the bale had lain at the station for two days, and could not be dispatched as they had no engine to send.

5th. On 2d inst. we sent a bale to Moffat, which was not delivered on the 6th, owing to the same cause as stated in complaint No. 4.

6th. On the 6th inst. we sent a bale to Manchester, and had a letter that it was not delivered on the 10th.

7th. On the 11th inst. we sent a bale to Wellington, Salop, and had a letter, dated the 16th, stating it had not been delivered, and cancelling the remainder of his order, owing to the railway company's delay in forwarding the goods.

Yours, &c.
pro Laing & Irvine,
HUGH MCCLUE.

Mr. Thomas Cathrae.

Ettrick Mills, Selkirk,
24 Oct. 1866.

DEAR SIR,

SINCE writing you with our statement concerning complaints against the North British Railway Company, we have received a letter from one of our customers in Huddersfield, of which you will find a copy annexed. This, if you think proper, may be also laid before the Royal Commission, so that it may be seen that the evils complained of are still taking place every day.

We are, &c.
J. & H. BROWN & Co.

Thomas Cathrae, Esq.,
Secretary, Chamber of Commerce,
Hawick.

COPY.—Letter from a Mercantile House in Huddersfield to J. & H. Brown & Co., Selkirk.

23rd October 1866.

WE are again suffering from the old grievance, viz., the goods invoiced by you on the 18th inst. have not yet reached us; now this is too bad, and ought to be remedied.

We would respectfully suggest that this matter be brought before your Chamber of Commerce at Hawick or elsewhere, requesting said body to call a meeting of the leading manufacturers of Hawick, Galashiels, Selkirk, &c. &c., with the view of ascertaining if it is not practicable to devise some means by which goods could be delivered here, if not on the first, but certainly on second day after their despatch.

Ettrick Mills, Selkirk,
23 October 1866.

DEAR SIR,

WE are in receipt of your circular of 16th inst., requesting us to furnish a statement of any delays occurring in the transmission of our goods through the railway companies, in order to its being laid before the Royal Commission. This we have now done, and inclose it to you herewith. You will see that we have confined ourselves in this statement entirely to two instances of vexatious delay, and only referred in a general way to many others. We hope, however, that the two we state fully will suffice to show that searching inquiries should be made, and coupled with the statements of other firms in this district, we have no reason to doubt but what the Royal Commission will endeavour to provide a remedy.

Since preparing our statement we have received the opinion of the Lord Advocate on the case laid before him, regarding the two instances of delay narrated in our statement, and have accordingly taken the opportunity thus afforded to append to the statement herewith sent copies of the queries and the Lord Advocate's opinion thereon.

We may state that many more instances of delay could be brought if necessary, but the two we give are the only ones we have taken legal advice upon.

Trusting that this will reach you in time to forward with the other statements you may have received,

We are, &c.
J. & H. BROWN & Co.

Thomas Cathrae, Esq.,
Secretary,
South of Scotland Chamber of Commerce, Hawick.

STATEMENT by Messrs. J. & H. BROWN & Co., Selkirk, relative to DETENTION of their GOODS in Transit, consigned by them to the NORTH BRITISH RAILWAY COMPANY, Selkirk.

THE subscribers are glad of the opportunity afforded by the Chamber of Commerce for the South of Scotland to lay before the Royal Commission on Railways a statement of their complaints against the railway company or companies over whose lines their goods are from time to time transmitted. It is quite impossible to particularise every instance of neglect or to estimate the probable loss occasioned by the companies' dilatoriness in the transmission of their goods to their destination, the consequential loss in such cases being much more serious than the immediate loss, as it is simply impossible to conduct business to the satisfaction of our customers unless some reform is effected. The complaints made to the subscribers to the North British Railway Company, to whom their goods are consigned, are almost an every-day occurrence.

In order, however, to make a short statement the subscribers will only here give two instances, occurring in last spring trade (in which they were compelled to adopt legal steps in order to protect themselves) as specimens of the many which they might give, and which they sincerely trust will assist greatly in giving the Royal Commission grounds for causing strict inquiry to be made, so that the obligations of the railway company to whom consignments are made may be properly known, and (as it is in the district of Selkirk) no longer have the public left to the clemency of the North British Railway Company.

The subscribers will now give the following instances, which, if necessary, can be proved from correspondence.

1. On the 28th February and on 1st of March last two bales of goods were forwarded from Selkirk addressed to a shipping house in Huddersfield, which were to be shipped on the 5th of March; but as the goods did not reach Huddersfield until the 6th they, in consequence of being too late for shipment, were all returned to the subscribers, and by them thrown into stock at an esti-

mated reduction in value of 25 per cent.* The North British Railway Company were written to repeatedly through their agent at Selkirk, and advised that the consequences of such delay would have to be met by the company, and a claim of 25 per cent. on the value of the goods was accordingly lodged against them, which amounted to 29*l.* 15*s.* This sum was retained by the subscribers in settling their monthly account with the railway company for carriages.

2. On 28th February and 1st March, the precise dates as in the former case, two bales were forwarded to another shipping house in Huddersfield, to be shipped in like manner, and these goods did not reach Huddersfield until the 7th of March, after many inquiries had been made both by letter and telegraph. The same consequences as in No. 1 ensued here, the goods having been returned and thrown into stock. In this case a similar claim of 25 per cent. on the value of the goods, viz., 41*l.* 13*s.* 8*d.*, was lodged against the North British Railway Company, and retained from their monthly account at a settlement of the same subsequent to the one previously mentioned.

Some time after retention of these claims the subscribers received a letter from the goods manager of the North British Railway Company, in which he intimated that after bringing these claims before the directors of his company, they declined to entertain them, and requested the money to be refunded. He also stated that where there are so many transhipments of goods, as between Selkirk and Huddersfield, the railway companies, instead of forwarding perhaps a waggon half full of goods, retain them until sufficient are accumulated to fill the waggon. In fact, the reasons given by the goods manager only served to show the more plainly that instead of six days the goods could easily have reached their destination in two days, and at the very outside in three days. The shipping agents in Huddersfield state that if the goods are delivered to them in the morning they can have them shipped at Liverpool that afternoon, from whence they arrive in New York in 10 or 12 days. This certainly differs much from the time taken to forward goods between Selkirk and Huddersfield.

The subscribers send a great quantity of goods to Yorkshire throughout the year, and in consequence of the loss sustained by these delays of the railway companies, have put themselves to considerable inconvenience in trying to remedy the evil. Besides the loss occasioned in the returning of goods, considerable loss is sustained by having the goods excluded from foreign markets, and thus lessening the demand for the produce of their manufacture. The subscribers also suffer considerably in the dissatisfaction felt by their customers in consequence of the many disappointments in not having the goods forwarded in time to have them shipped by the first vessel.

The subscribers, more for the purpose of having the obligations of the railway companies properly defined than for any compensation, have at this moment a case (narrating the two preceding instances of delay) laid before an eminent counsel in Edinburgh for his opinion, and have, pending that opinion, consigned the amount retained from the railway company's accounts, in the hands of their solicitors.

It will be seen from what has been stated, that the North British Railway Company come very far short of satisfying the demands upon them, and in the district of Selkirk there are few in business, *if any*, who have not just grounds to complain of that company.

J. & H. Brown & Co.
Ettrick Mill, Tweed Manufacturers.
Selkirk, 20th October 1866.

* The goods here referred to were specially made for the American trade, and had they been sent at a later date would have arrived too late to catch market.

(Copy.)

Queries, and Opinion thereon by the Lord Advocate, respecting the two cases of Delay in the transit of Goods by the North British Railway Company, within narrated.

Queries.

1. Is counsel of opinion that in the circumstances detailed Messrs. Brown have just cause of complaint in consequence of the time taken to deliver their goods, and have they any power, under Act of Parliament or at common law, to compel the railway companies, whose lines they require to use, to transmit their goods to their destination within *reasonable time;* and if so, how ought they to act in the circumstances detailed or in similar circumstances?

2. If counsel be of opinion that the Messrs. Brown have just grounds to complain in the instances narrated, is he of opinion that the North British Railway Company is liable to them in damages for the loss they have thereby sustained? or

3. Is counsel of opinion that their claim must be made against the several companies jointly over whose lines the goods were carried, or against the particular company on whose line the delay occurred?

4. Should counsel be of opinion that the Messrs. Brown have instructed facts sufficient to found a claim of damage, is that claim limited to the actual or direct pecuniary loss they have sustained, or are they entitled to claim a sum as consequential damages to meet the indirect effect of the delay on their business?

5. Should counsel be of opinion that the North British Company is liable for the damage incurred, were the Messrs. Brown entitled to retain the same to the extent of the *direct* pecuniary loss from their monthly accounts with that company; and having done so, should it now be returned to the company, or consigned in bank until the question is settled in the contemplated action at their instance, or should they retain the sum deducted from the accounts and plead compensation in any action which the Company may raise against them?

Opinion.

1. I am of opinion that the memorialists have a just claim under the circumstances detailed in the memorial. I hold that the contract of carriage implies an undertaking to deliver *within reasonable time.* What is reasonable time is a jury question, and, therefore, incapable of any exact ascertainment. In my opinion the delay in this case was not excusable; it was not attributable to inevitable accident or to any cause which was not or ought not to have been foreseen. I do not think that the companies can be reached otherwise than by way of an action of damages for loss from breach of implied contract. I know of no competent process of *compulsiter* under Statute or at common law.

2 and 3. I think that the question may be and should be raised against the North British Company alone, as the company with whom the contract of carriage was entered into.

4. The demand is, in my view, limited to the effect of the delay on the disposal of the particular goods in question, and cannot be extended to the indirect consequence of loss of trade.

5. I recommend an action of damages to be raised, and payment of the account made under protest. The abstract right to retain may extend only to the sum charged for the carriage of the very goods in dispute, but can go no further.

The opinion of
(Signed) George Patten.
30, Heriot Row, Edinburgh,
17th October 1866.

APPENDIX DY.

REPLIES of Messrs. BASS & Co. and of other BREWERS of BURTON-ON-TRENT, to the STATEMENTS of Mr. ALLPORT.

TO THE ROYAL COMMISSIONERS ON RAILWAYS.

Extracts from Mr. Allport's answers to the evidence tendered on behalf of the Brewers of Burton-on-Trent.

16,885. (*Mr. Glyn.*) Have you observed that in answer to one of the questions put to him, he (Mr. Cosgrove) says that in point of fact you must have known it, because you had the overcharge sheets?—Yes; he says in his statement, "We have it on high authority that the Midland Company "knew all along the scale of rates according to which "Messrs. Allsopp and Sons were paying the London and "North Western Railway Company." I will first explain to the Commission how the business was done. Before the London and North Western Company had their own establishment at Burton we did their work, and the goods were invoiced at the same rate as to every other brewer; then the London and North Western Company sent those overcharge sheets, not to us, not for our direction or information, but to Messrs. Allsopp. After that, occasionally they would accidentally come into our possession, and the whole list of overcharge sheets that have ever come into our possession I have now by me; and there is a list out of all the rates which are included in their list of rates to Messrs. Allsopp, which consists of over 14 pages. We have only received overcharge sheets from 22 places, and we commenced making a list of them. We thought that by degrees we should ascertain exactly what rates were being charged, but most of them were very unimportant places. There is Beeston, Wilmslow, Dunstable, Wolverhampton, Bodorgan, Mostyn, Acton, Berkhampstead, Atherstone, and other small places. There is only one or two important places; there is Oxford, Dublin, Chester, Northampton, and Dudley.

16,886. The London sheets are not included in that list, are they?—No, nor a tenth part, nor a twentieth part of the stations to which the traffic was sent. This is the list that we commenced to make out, but the London and North Western Company's agents finding that those sheets were occasionally getting into our possession, took steps to prevent it, and for the last four years certainly we have not had a single overcharge come into our possession, until recently when the two companies have now settled matters between them, and we have now all those overcharge sheets to go through with the London and North Western Company, and to settle with the various brewers. So far from the Midland Company having any knowledge of those overcharge sheets beyond what I have stated, we did all in our power to get them, for they would have enabled us to make an allowance to other brewers.

16,902. (*Chairman.*) That 9*d.* a ton and a lower scale of rates make up the total amount which you have agreed to refund to them?—Yes; but I should state that even if we had obtained the entire list, it would not have put us in possession of sufficient information to deal with it, because this agreement with Messrs. Allsopp is a very extensive affair, and it deals with a great many things which the overcharge sheets could never have made us acquainted with. It is a closely printed document of 13 pages, and there are a great many stipulations and conditions in it which are absolutely necessary for us to know before we could make the allowances to the other brewers.

Mr. Cosgrove's replies on behalf of the Brewers.

That Mr. Allport could have ascertained the scale of rates his own evidence places beyond doubt. He admits he had the secret sheets for 22 places. Why we discovered the entire scale from sheets of 16 stations only, and that even from the 14 stations which he here casually mentions, the scale of rates can upon mileage analysis be discovered twice over. In one instance from four of the stations, and the other from nine. If then as he says these sheets came into his possession prior to four years ago, how far wrong am I in saying that he must have known of the rates all along?

Mileage analysis of the stations mentioned by Mr. Allport, twice showing the private scale of rates charged to Messrs. Allsopp and Sons under their agreement with the London and North Western Company.

Stations.	Rates Charged in Private Sheets.	Distance from Burton.	Rate per Mile.
	s. d.		*d.*
Atherstone	3 6	21	2
Wolverhampton	5 0	30	2
Acton	8 7	59	$1\frac{3}{4}$
Beeston	8 2	56	$1\frac{3}{4}$
Wilmslow	9 4	64	$1\frac{3}{4}$
Berkhamstead	11 $10\frac{1}{2}$	95	$1\frac{1}{2}$
Bodorgan*	15 0	138 as 120	$1\frac{1}{2}$
Mostyn	10 9	86	$1\frac{1}{2}$
Oxford	13 6	108	$1\frac{1}{2}$
Dudley	5 0	30	2
Chester	9 $7\frac{1}{2}$	66	$1\frac{3}{4}$
Northampton	9 4	64	$1\frac{3}{4}$
Dunstable	11 $1\frac{1}{2}$	89	$1\frac{1}{2}$

*For about 50 miles over 120 the rates are charged as 120 at $1\frac{1}{2}d$ or 15*s.* The London and North Western does not extend further from Burton than to call for more than about two rates, a few pence higher than 15*s.*

Private Scale of Rates, as per Allsopp's Agreement.

For all distances under 50 miles, 2*d.* per ton per mile.
For all distances over 50 miles, and under 75 miles, $1\frac{3}{4}d.$ per ton per mile.
For all distances over 75 miles, $1\frac{1}{2}d.$ per ton per mile.
This scale does not include the rates to London and Dublin (which were fixed at the same as those paid by other brewers).

How does this consist with statement 16,886 that the overcharge sheets showing the rates "would have enabled "him to make an allowance to the brewers if he could have "got the private sheets in sufficient number?" He does not there say possession of the agreement was necessary.

The lower scale of rates, and the payment for terminal services, are substantially all we claim, and the gist of the whole agreement.

Extracts from Mr. Allport's answers to the evidence tendered on behalf of the Brewers of Burton-on-Trent.

Mr. Cosgrove's replies on behalf of the Brewers.

16,896. (*Mr. Glyn.*) In answer to this question, Mr. Allport incidentally says, we have in fact expended about 150,000*l.* or 160,000*l.* in one single warehouse for Messrs. Bass in London; we have also expended upon the Burton branches, exclusively for the accommodation of brewers, I think about 130,000*l.*, to enable the brewers to get upon the line, and to save them the expense of cartage.

Mr. Allport forgets to state that we are to pay them for outlay for our purposes upon the London premises, 6 per cent. per annum, if held for 21 years, but 7½ if for 14 years, and for running upon their Burton branches a fixed rental, as do other brewers who use or may use them. Mr Allport is in error in saying these were made "*exclusively*" for the accommodation of the brewers. The London and North Western or any other Company using them must pay a toll. Again, the outlay not only insures them a splendid traffic, but having a series of wharves throughout the branches for loading and unloading goods, the work has not to be performed at their limited Burton Station, where it really could not be done without a large outlay, which these branches obviate.

16,897. (*Earl of Belmore.*) Are all those short tramways that run into their premises your property or theirs?—I have brought here a map of Burton, which was published by a gentleman residing there, which shows the precise position of matters at Burton (handing in the same and explaining it to the Commission). Part of the terms of the agreement of Messrs. Allsopp with the L. & N. W. Company, is that they should be allowed 4½*d.* per ton for taking the traffic over those private branches of Messrs. Allsopp & Co. into the L. & N. W. Station, and not an unreasonable allowance considering the expense of those branches. Messrs. Bass & Co. have still considered that a great hardship that we refuse to allow them 4½*d.*, but we say, you have merely made a small connecting tramway to join our main line, but Messrs. Allsopp have incurred in their own case the cost of these private branches, and it is manifestly unfair to call upon us, not only to be at the expense of branches, costing 130,000*l.* but to allow 4½*d.* per ton because we have made them.

16,900. (*Chairman.*) You have not admitted the fairness of their demand for 4½*d.* per ton?—No; we have not.

I had prepared a map of the sidings of the Midland and L. & N. W. Companies, and the private lines of Messrs. Bass & Co., and Messrs. Allsopp & Sons, to show the Royal Commission that ours are not "merely small connecting tramways," as Mr. Allport is pleased to state—that they are, on the contrary, a perfect system of railways, extending over 4¼ miles. Their cost, exclusive of land, was nearly 18,000*l.*

Mr. Allport having however since admitted at a meeting, &c., on the 23rd July last, that our claim of 4½*d.* is reasonable, and agreed to pay the same, I am spared the trouble of combatting these erroneous statements.

16,905. (*Mr. Glyn.*) I see by the 12th clause of that agreement, that the L. & N. W. Company are obliged to provide storage room at Camden Town, Haydon Square, and Poplar for Messrs. Allsopp?—Yes; the Haydon Square and Poplar accommodation was provided many years before that agreement was in existence. I see that there is a statement as regards the amount of the overcharge. Mr. Cosgrove says, that the claim upon the Midland Company amounts to 44,788*l.* That claim consists of 4,662*l.* at the stations purely on the Midland, of 9,073*l.* at the stations off the Midland, and partly on the L. & N. W., and partly on other companies' lines, and there is a very large item amounting to 11,606*l.* which is purely North Staffordshire, and arises in this way. The North Staffordshire line joins the Midland a very short distance out of Burton. We did their work we received their traffic, and dealt with it, and made out the accounts, but the North Staffordshire Company received the money. Messrs. Bass & Co. make a claim upon us, although they know that we have nothing whatever to do with it, it is purely a question for the North Staffordshire Company to deal with, but they swell the amount to 44,000*l.* by nearly 12,000*l.* which is due entirely from the North Staffordshire Company.

16,906. (*Captain Galton.*) The North Staffordshire Company carries from Burton entirely without any reference to your line, I think?—Entirely.

16,907. It has an access to Burton through your Station, of course?—Yes.

16,908. Still I presume it makes rates without regard to you? Yes, quite independent of us.

16,915. (*Mr. Glyn.*) That is not as against the Midland Company only, but as against the others?—No it is not so; I will read to the Commission a letter from Bass and Company dated 26th of August 1862:

"We have before informed you that 35*s.* is the maximum "of our delivery, and wherever your rate exceeds that "figure the difference is charged by us to consignee. Now, "however small the amount may be, the trade object to "any such charge, and if we cannot deliver our ales free of "charge they object to purchase. We hand you a list of "Scottish stations which we think should not exceed 35*s.* "The stations to which at present the rate is 36*s.* 8*d.* have "lately been reduced by you (February 1862) from 40*s.* "Now this reduction is useless, and if you cannot say 35*s.* "the rates may just as well remain unaltered, say 40*s.* for "we cannot deliver free beyond 35*s.* and if only a mere trifle "per barrel our friends object. Please see what you can "do for us before our Season commences." And that letter encloses this long list:—

In quoting the claims upon the Midland, Mr. Allport *omits* to add the interest and the terminals 15,000*l.*, but in referring to the North Stafford he *includes* terminals in the amount 12,000*l.* We can look to none but the Midland Company for the terminal allowances on North Stafford traffic. The latter company having no station here, pay to the Midland Company the *full* terminal charges. Mr. Percy Morris in his letter to us of 12th June 1866, says, "the Midland Company undertake terminal services on our traffic, and receive from us the whole of the 1*s.* 6*d.* terminal allowance. If they delegate any portion of their terminal duties to you under an agreement to which we are not parties, the matter is one to be settled between yourselves and the Midland Company." We have claimed nothing upon rates to North Stafford stations proper. The claims are upon *London and North Western stations*, to the whole of which the Midland Company quoted rates in their agreement of January 1861, (see pages 14 and 15 of copy of agreement in my evidence,) for the northern portion of the L. & N. W. line, viz., Liverpool, Manchester, &c., the goods pass over the North Stafford line viâ Crewe junction. It is on the traffic to such places that the North Stafford claim—as it is termed—arises. Again, as the London and North Western have allowed, and do allow, the *whole* of Allsopp's claims for terminals and rates to be made upon them, the traffic viâ the North Stafford included, we look to the Midland to treat us similarly.

Extracts from Mr. Allport's answers to the evidence tendered on behalf of the Brewers of Burton-on-Trent.

Mr. Cosgrove's replies on behalf of the Brewers.

It appears the majority of these rates were reduced by the large sum of 1s. 8d. per ton, and that to 32 places, no goods were sent at all during the past year.

I will hand in a latter dated April 1st 1863, from Messrs. Bass to T. Walklate, Esq., Midland Railway Co., and another dated also April 1st 1863, from Messrs. Bass to J. H. Bower, Esq., goods manager of the Scottish North Eastern.

Again, to the places named in these letters, (which are simply written in the courteous terms we should adopt if referring to important places,) we positively do no business whatever.

Dear Sir, Burton on Trent, April 1st 1863.

The list is to hand and for which we feel obliged. We feel sure the Scottish North Eastern Company intended the alteration also to apply to the four stations omitted by you, *i.e.*, Newtyle, Monifieth, Carnoustie, and East Haven, they not being struck off the list furnished by us to the Scottish North Eastern Company, and they erased several that were situated on the Dundee and Perth. The rate to these four stations stands 40*s.* and yet both Dundee and Arbroath 32*s.* 6*d.* We ask for the four stations in question to be 35*s.*

Dear Sir, Yours truly,
Bass, Ratcliff & Gretton, per I. S. Farmer.

"Ale Rates."

Dear Sir, Burton on Trent, April 1st 1863.

The Midland Company have settled this question to our satisfaction, they say the E. and S. Committee minute does not apply to Newtyle, Monifieth, Carnoustie and East Haven, which they say are situated on the Dundee and Arbroath; as you did not strike these four stations from our list we presumed they were under your superintendence. We beg to thank you for so liberally meeting us, and we feel sure the alteration will increase the traffic.

Dear Sir, Yours truly,
Bass, Ratcliff & Gretton, per I. S. Farmer.

16,926. Again, in answer to this question asked by Mr. Glyn, Mr. Allport adds: And now, because we have got those through rates, that is to be used as an argument against us, and it is to be said that we charge higher rates to other places. I think I have now pretty well exhausted this complaint. I hold in my hand another letter, one of many hundreds, in which it is stated that they find they "can do a trade at Largo, in Fifeshire; may we note a "rate of 40*s.* a ton from this station to Largo?" We immediately communicated with the other companies, the rate being then 60*s.* a ton, and we afterwards advised them that we had arranged a rate at 40*s.* a ton.

Mr. Allport has here an equally weak case. On reference to our books we find no trade has been done at Largo the past three years.

And this is the quality of argument opposed to the palpable facts adduced in the complaints of a great trade.

Extracts from Mr. Allport's answers to the evidence tendered on behalf of the Brewers of Burton-on-Trent.

16,916. In answer to this question, Mr. Allport adds. It is somewhat interesting to go through these lists of irregularites that Mr. Cosgrove has given. I have been at the trouble of drawing out a list, and I have taken his figures; they are not quite correct, but I assumed them to be so, and I have put in another column what our Parliamentary tolls would be, assuming that we charge the brewers what we have a right to charge under our Act of Parliament. I have taken the places given by Mr. Cosgrove, and the first is "from Burton to Aberdeen;" the charge we make, including terminals, is 32*s.* 6*d.*; the charge we could make, exclusive of terminals, is 115*s.* From Burton to Stonehouse, 35*s.*, and we could charge 111*s.*; to Montrose, 106*s.*; to Forfar, 106*s.* 6*d.*; to Blairgowrie, 97*s.* 9*d.* Then come several routes: from Burton to Ardrossan, 30*s.*, against that we should put 81*s.* 3*d.* Then, to Ayr, 81*s.*; to Troon Harbour, 80*s.*; Kilmarnock, 77*s.* 3*d.*; Sanquhar, 69*s.* 3*d.* (and so on with the list of stations upon the 19 railways under the head of "Unequal Rates," Section A.)

16,930. (*Chairman.*) I think the brewers make a distinct demand with respect to terminals, that there should be the same allowance made to them that has been made in any other case of 2*s.* 6*d.* They distinctly demand that the terminals allowed by the Clearing House should be recognized when there is no cartage, and that the gross rates should be diminished proportionally?—They have nothing to do with the divisions between the companies. That is merely a convenient mode of arriving at what would otherwise cause a great deal of trouble in dividing, in order to meet these inequalities; for instance, I will suppose two lines, each of 50 miles long. If in all cases the division of the mileage was equal, there would be no terminals at all, it would be merely dividing 20*s.* by two, and giving to each 10*s.*; but in some cases, by dividing merely by the mileage, it would give to one 1*s.* and the other 19*s.*, and that would be manifestly unfair. As the Clearing House system is so huge, it would involve such an enormous multiplicity of duties there to divide in each case upon its particular merits, that for the sake of saving trouble and simplifying the accounts, this system has been, as I may say, jumped at; for it is nothing more than that, simply between the companies, in order that there shall be a certain sum deducted at each end, first of all to meet these inequalities, and then that the remainder shall be divided by the mileage. Take, for example, the case of the North Staffordshire line, and assume that it carries ale to Liverpool; it goes for three-quarters of a mile along our railway, and if we divided it by the mileage we should have, probably, some 2*d.* to 2½*d.*; but it would be utterly impossible that we could carry on our trade at anything like a profit if we were bound to carry a ton of goods for 2½*d.* The result, therefore, is, that these divisions are arbitrary, and made in order to meet the varying circumstances of each particular case.

16,932. (*Chairman.*) The Clearing House charge for Ale is 4*s.* at Burton, is it not?—That is for everything.

16,933. Relating to that class of goods?—All goods, excepting what are termed special, or the mineral class. You will find that it is 4*s.* a ton carted, and of course all companies know well, and have known for years, that we do not do the cartage of Burton. I would say that there is not a company in the kingdom that is not acquainted with the particular circumstances of Burton, but they do not object, and it would simply resolve itself into another mode of dividing the 35*s.*

16,934. (*Captain Galton.*) You would have that 35*s.* whatever charge you were allowed by the companies for carting?—Quite so.

16,937. (*Earl of Belmore.*) The object in fact of fixing this Clearing House terminal in a general way is to save the companies from going into a minute calculation on every occasion when they have to make any division of profits between themselves?—Yes, and to give you some notion of the enormous transactions which takes place, I believe that the Clearing House establishment now consists of nearly a thousand clerks, and it will be obvious to the Commission what an enormous amount of business that involves. If we did not adopt a system of this kind the work never could be done, and what would be the result? Great inconvenience to the trade of the country, because it would compel all companies to charge their local rates.

Mr. Cosgrove's replies on behalf of the Brewers.

I submit this is raising a new issue and evading the real one. It is no answer to our complaint of the serious inequalities between one railway and another to point out what could be charged under Parliamentary powers. The maximum rates were enacted for *short* distances on each line locally, and long before through rates for distant points were arranged. He knows for even short distances they are practically obsolete; that if they were enforced the lines would not pay working expenses, while for through distances goods could not be sent at all. My questions, why should the railways vary from each other in their charges from 15 to 121 per cent. are still unanswered. He ignores the 2nd clause of Her Majesty's commands to the Commission, "That they inquire into the equality or "difference of charges under similar circumstances whether "as between *different companies* or by the same companies "in different cases, and whether there are any special "circumstances which render necessary such inequality or "difference."

The case of our claiming upon the Midland Company for traffic which goes but three-quarters of a mile upon their line, paying them but 2*d.* or 2½*d.*, exists nowhere but in Mr. Allport's own mind. Reference to the statement below of the railways upon whose weights we have claimed this 2*s.* 6*d.* shows on the contrary that the lowest mileage the Midland got was to Tamworth, 13 miles, upon the 100th portion of the traffic; while upon three-sevenths of the whole they got from 30 to 100 miles, and upon nearly four-sevenths they actually received upon 120 to 150 miles. But although we do not, as Mr. Allport imagines, claim the 2*s.* 6*d.* upon our traffic going to North Stafford railway, I deny emphatically that Mr. Allport gets from the North Stafford Company the 4*s.* which he would lead one to believe he does to make up the small mileage allowance. In proof, see Mr. Percy Morris's letter quoted against question 16,905, distinctly asserting that their payment to the Midland Company for doing the North Stafford terminal work is 1*s.* 6*d.* per ton.

So far from the divisions between the companies being arbitrary, the Clearing House makes them upon the most fixed and rigid principle, the terminals being allowed according to Rule 69, which gives on all traffic, whose is rate is above 10*s.* per ton, 4*s.* when *carted*, and 1*s.* 6*d.* when NOT carted, there being in the whole country only three exceptions (which proves the rule and my argument) in the application of the 4*s.*, viz., at Liverpool, Birkenhead, and Southampton Docks, where no carting being done by the companies only 1*s.* 6*d.* is allowed. The companies themselves have had these exceptions noted at the clearing house for the guidance of that establishment, which has no discretionary powers whatever, being guided in its division of receipts entirely by whether the entries are in the "carted" or "not carted" column of the monthly accounts received from the stations, based on the statement of the daily invoices. (See specimens of both forms attached.) In the three excepted cases, although the goods may be entered in the "carted" column only 1*s.* 6*d*, is allowed, the usual 4*s.* being of course allowed to the stations which may forward to, or receive from, such excepted places. In all cases *not excepted* the Clearing House naturally allows the 4*s.* at both ends, and hence it is the Clearing House finding our traffic entered in the carted column—there being no column set apart for "carted at one end only"—applies its *fixed* rule and apportions 4*s.* equally to Burton where no carting is done, and to the other end where it is done. If the 4*s.* were duly earned, why did Mr. Allport and his two principal officers together find it necessary to gravely deny at Derby on the the 22nd December last that they ever received that amount on Burton ale?

Again, we have seen they are content to receive from the North Stafford Railway the correct terminal, 1*s.* 6*d.*, on what we, under precisely similar circumstances, send through their hands for that company. So far from the Clearing House having arbitrary power (creating confusion instead of order), and ours being, as Mr. Allport would lead one to infer, an ordinary case arising from "jumping at" and "meeting inequalities," I challenge Mr. Allport to name another town upon whose *staple* trade 4*s.* is allowed and no carting done. Our case is an anomaly.

Extracts from Mr. Allport's answers to the evidence tendered on behalf of the Brewers of Burton-on-Trent.

Mr. Cosgrove's replies on behalf of the Brewers.

Statement showing the weight forwarded to, and received from, the following foreign railways during the year 1864, also the junctions where the traffic left the Midland line, and the distances to such junction from Burton.

Total charged at carted rates, upon which the claim of 2*s.* 6*d.* per ton is made.	23,677	0	1	4			

16,931. (*Mr. Glyn.*) It is, in fact, an arrangement made between the companies, with which the trade has nothing to do?—Yes. Mr. Cosgrove happens to have been a station master, knowing very little of the general arrangements of the company, and, indeed, nothing more than applied to his own particular station, and knowing that these allowances were made through the Clearing House, he thinks that he has a very fine chance for making a claim, and he makes it.

I desire to notice this only in so far as he deems it a disqualification on my part, remembering as I do that Mr. Allport himself was for several years a station-master at Hampton-in-Arden, near Coventry. I submit that were it impossible in such a position for a studious man to acquire knowledge of the economical question in connexion with railways, we should not see Mr. Allport holding his present eminent office.

16,923. You perhaps do not know what the tonnage had been 1845?—I did not think it necessary to go so far back; but there again Mr. Cosgrove is entirely wrong in his history of the earlier transactions of Burton.

If he did not go back so far how can he say I am entirely wrong? I can produce Messrs. Bass and Co.'s books and original documents to show that their ale was in 1838 conveyed by canal and river to Gainsboro', and thence by sea to London for 26*s.* per ton; and in 1845 by the direct canal it was done for 13*s.* 7*d.* per ton, all expenses included.

16,927. (*Chairman.*) Is the correspondence with Mr. Cosgrove, which appears at the end of his evidence, still going on between the Burton brewers and your company?—No. It is perfectly true that there is nothing in the correspondence alluding to the matter having been discussed, but it has been discussed with Mr. Bass and myself, and with other members of the firm.

The correspondence is not going on because Mr. Allport stated in his last letter quoted in my evidence that "no "good could possibly result by the continuance of the "discussion by correspondence."

16,928. (*Lord Stanley.*)—I may say that I wish they had put in the entire correspondence, for I had a long correspondence with Mr. Bass upon this very subject.

The correspondence is entire. The tabular statement of rates from other Midland stations to London was never submitted to Mr. Allport till given in our first letter of January 12th, 1866, for the reason that we were not ourselves previously aware of those rates. You have seen by that correspondence that Mr. Allport evaded meeting our figures. Again, in his answers to our evidence before this commission he has avoided all mention of these very Midland rates under section "B.," confining his attention to the Great Eastern Company's Yarmouth rate. Mr. Bass never had any correspondence with him on the Midland Company's London rates referred to in the printed letters.

I have the honour to be,
My lords and gentlemen,
Your obedient servant,
J. COSGROVE.

Extracts from Mr. Allport's Answers to the Evidence tendered on behalf of the Brewers of Burton-on-Trent.

16,881. (*Mr. Glyn.*) That is, of the agreement of 1859?—Yes; he (Mr. Cosgrove) goes on in two or three places to state, and he did it on high authority, that the Midland Company knew of this agreement from the commencement. I am a good deal surprised at that statement, because from time to time correspondence has taken place and interviews have been held upon the subject. I have myself seen various members of the firm of Bass and Company, and told them that the moment we knew what the agreement was, they should have the benefit of it. Only so late as the 15th September, 1864, I wrote to Messrs. Bass and Co. to this effect, "We have not yet received a copy of the "agreement between the London and North Western "Company and Messrs. Allsopp, but we expect that we "shall have it in a few days." We had been urging upon the London and North Western Company the necessity of supplying us with this agreement, but we never succeeded in getting it. The first time we received the agreement was late in the autumn of 1864, and of course even down to this moment we are under the restriction as to its privacy which is put upon this agreement by the London and North Western Company; it was handed to Mr. Walklate with the understanding that the information was for the present for the private use of the Midland Company only. I merely mention this—of course the London and North Western Company have a perfect right to make those agreements, and not furnish other companies with copies of them; but the whole of this was in the knowledge of Messrs. Bass and Company and the other brewers, as is shown by my letter of September 15th, 1864. When we received the agreement I immediately wrote to them to say that I had received it, and that when I had fully looked into the terms of it I would then examine all the accounts and make them a drawback; but I found that there was a supplementary agreement.

16,882. What were the dates of those agreements?—Those were dated in April 1864, of which agreements I did not get copies until the 29th March, 1866, a month ago, so

Replies of the Brewers.

Neither the memorial nor Mr. Cosgrove's evidence mentions "Agreement." They say "Scale of Rates," which can be proved, see Mr. Cosgrove's analysis in answer to 16,885. Mr. Allport did not tell Messrs. Bass and Company of Messrs. Allsopp having a favourable agreement, they had first to tell Mr. Allport. They never had an interview for the purpose of discussing this subject, but doubtless whenever we met it was referred to.

They repeatedly urged Mr. Allport to take every possible step to obtain Messrs. Allsopp's agreement, and he has as frequently promised to do so. Seeing that these promises have to this hour remained unfulfilled, we do not consider Mr. Allport entitled to the credit he claims for the bare making of them, especially on witnessing the manner in which he carried out his second promise, "that when he "had looked into the agreement he would examine all the "accounts and make a drawback." He, or rather his goods manager, Mr. Walklate, made several objections in writing on September 19th, 1865, to Messrs. Bass and Company's claims, although they had had for months previously the agreement, whose clauses would tell them that such objections were unfounded. Only one promise has the Midland Company been able to keep, viz., that to their joint carriers the London and North Western Company, whose injunction of privacy for a time sheltered them from their responsibilities. Again, to show the combination there is between the Companies on this point, four of our body, viz., Messrs. Worthington and Company, Mr. Bell, Mr. Evershed, and Mr. Thompson are able to state positively that when they waited upon Mr. Cawkwell, L. & N. W. Co., on 7th April, 1865, and asked for a copy of Messrs. Allsopp's agreement he declined, saying that he was under a pledge to the Midland Company and could not therefore divulge it.

Messrs. Bass and Company it was who on the date named sent this supplementary agreement to Mr. Allport. Messrs. Allsopp and Sons very kindly gave them a copy on

Extracts from Mr. Allport's answers to the evidence tendered on behalf of the Brewers of Burton-on-Trent.

Replies of the Brewers.

that it is only within a recent period that we have been in full possession of the terms upon which Messrs. Allsopp's agreement with the London and North Western Company was based, and that we have had an opportunity of putting the brewers on the same footing.

16,895. (*Chairman.*) You were aware all the time that you would have to refund a considerable sum to Messrs. Bass and other brewers from the rates actually charged?—From 1859. I knew of the agreement being signed within a few weeks of its accomplishment, and I immediately myself informed not only Messrs. Bass, but all the brewers. I went down to Burton and went round and told all the brewers that the agreement was signed, and if they would not make a single agreement, that they should have the benefit of that agreement as soon as we found it out.

asking for it. It was simply a memorandum in which the London and North Western Company agree to allow Messrs. Allsopp and Sons 4½*d.* per ton for hauling, the London and North Western Company having in their previous agreement of November 1859 undertaken to do such hauling to and from Messrs. Allsopp's premises, but afterwards allowed the work to devolve upon Messrs. Allsopp themselves. Mr. Allport's remarks are nothing to the purpose. They would lead any one ignorant of the matter to suppose that the agreement of 1859, which he admits he received in the autumn of 1864, could not be dealt with without this supplementary memorandum of 1864, and that he was waiting for it.

He was aware *ten months* previously, when Messrs. Bass and Company sent him their claims, (which included this 4½*d.*) of the nature of the demand. Again, in answer to the Midland Company's objections of 19th September, 1865, to the claims, Messrs. Bass and Company wrote to Mr. Walklate, their goods manager, on 3th September, 1865, in reference to the 4½*d.*, "You are aware that on a recent "occasion in our office this allowance was admitted in "your presence by the London and North Western repre-"sentative to have been allowed to Messrs. Allsopp and "Sons." After knowledge of this admission we cannot but think that the Midland Company could have obtained the memorandum had they been in earnest, months before Messrs. Bass and Company obtained it for them.

16,879. In an extract from this question Mr. Allport says, "When we heard of the agreement being made we "immediately waited upon Messrs. Bass and Co. and most "of the other brewers, and entered into the agreements "which are alluded to in Mr. Cosgrove's evidence."

We deny that Mr. Allport went round *immediately* and to *all* the brewers.

He called upon Messrs. Ind, Coope, and Co. in January 1863, promising that they should have the same rates as Messrs. Allsopp and Sons when he could get the agreement. Upon Messrs. Salt and Co. he did not call; they had to draw his attention to the subject. The Burton Brewery Company do not remember such a call, while upon the seven other members of our body he never called at all. Five of these, however, viz., Messrs. Worthington and Co., Thompson and Son, Bell, Evershed and Nunneley in October 1863 called Mr. Walklate's attention to the subject and received the usual promise.

16,895. With reference to this question Mr. Allport further adds, "There is no pretence whatever for the brewers "saying that we knew this and kept it back in order to "charge higher rates; we have allowed every brewer in "Burton to keep back sufficient money to cover all those "allowances when they become known."

When our agreements were made the insertion of the protecting clause to place us "on as good terms as any other "railway company does any other brewer" had reference equally to the rest of the trade as to Messrs. Allsopp and Sons, and is always inserted in our agreements. We should not at the time know the latter firm had better terms.

16,882. Mr. Allport in answer to this question says,—"But to show that the brewers have not suffered any loss "from this, I may mention that when we found in 1864 "that we could not get at the exact terms of the agreement "we allowed them to keep back their accounts to the extent "of some 40,000*l.* or 50,000*l.*, so that they should have the "money in hand, and it would be merely a question of "account when the terms were known."

Quite the reverse. It was anything but their wish that the money should be stopped. The Midland had simply to submit to the course taken. In answer to Messrs. Bass and Co.'s letter of 18th February 1865, informing them that their collectors need not call for the money for the previous month's account, then soon due, as they were getting on with an examination of their old freight accounts for drawback, Mr. Allport wrote on the 20th as follows:—"I am "decidedly of opinion that the proper course to pursue is "to furnish a statement of the drawback claimed before "taking any steps to withhold payment of the accounts." Again, on the 25th February he further wrote:—"I must "request you will not adopt the course named in your letter "of the 18th inst."

16,893. (*Earl of Belmore.*) What was the object of the London and North Western Company in keeping those agreements from your knowledge?—I can quite understand that when the London and North Western Company came to Burton of course they wished to get into favour with the Burton brewers, in order to get all the traffic they could. They made this agreement with Messrs. Allsopp, and they said to the other brewers, "If you will be prepared to enter "into the same agreement with us as Messrs. Allsopp have, "you shall have the same terms. We will not show you "the terms until you say that you will enter into the agree-"ment."

We are simply astounded at these remarks. Messrs. Allsopp's agreement was never offered to any of us. We submit that not only the facts of the case, but Mr. Allport's own evidence, are a contradiction to his statement. See his answer to Question 16,881, that even he could not obtain the agreement till the autumn of 1864, and that he is to this day under a restriction as to its privacy.

16,922. In answering this question asked upon another subject Mr. Allport adds the following statement:—"There "is also a fallacy which runs through Mr. Cosgrove's "statement, wherever he quotes rates to other places, and "when showing how much the London rate is in excess, "he gives 14*s.* 2*d.* as the rate to London, knowing at the "same time that that is subject to 10*d.* reduction, which "makes the whole of his calculations wrong, because the "14*s.* 2*d.* should have been reduced by 10*d.* before he made "his calculations. Judging from the evidence, it would "appear, and the Burton brewers would lead anyone to "suppose, that the trade of Burton has been very much

Mr. Cosgrove's statement of London rate of the past is correct. The 10*d.* reduction was in force only a short portion of the period over which our claims extend and under consideration of the Commission. It belongs to a new agreement, under which we have not yet had our first settling.

Nothing of the kind. While demurring to Mr. Allport's exaggerated estimate of the economy of the trade of Bur-

Extracts from Mr. Allports's answers to the evidence tendered on behalf of the Brewers of Burton-on-Trent.

" interfered with and kept back by the operations of the " railway companies. There is probably no trade in the " country which has so rapidly advanced as the Burton " brewing trade. The wealth of the Burton brewers is " proverbial throughout the whole of the Midland counties, " and the value of the property they are putting up. They " think nothing of spending 200,000*l.* or 300,000*l.* in " putting up new breweries; and although they have had " from time to time large reductions in their rates of carriage, " in no instance have the public ever received the benefit of it.

" On the contrary, to my certain knowledge the price of " ale has been advanced on two or three occasions."

16,926. (*Mr. Glyn.*) According to your experience the great increase at Burton has arisen from the opening of the railways?—No doubt of it, and they are indebted—I say it fearlessly—for their present enormous business entirely to the policy of the Midland Company. We certainly did pay great attention to it, and of course for our own interest we wish to see the trade increase; and I think in fairness I can appeal to Mr. Glyn to say whether it has not been a constant source of application on the part of the Midland Company for reduced rates for the carriage of the Burton beer from the year 1843.

Replies of the Brewers.

ton, we admit of course that in common with the whole country we have benefited by the introduction of railways. But our proposition is that we do not derive the full benefit they are capable of conferring if worked under an uniform and responsible system of management.

There was a moderate reduction in 1860, and we immediately gave the public the benefit of the same by delivering our ales to towns south-east of London and to other parts of the country where we were previously unable to pay carriage to. Competition in all such cases regulates our business, while on railways we have found that this desirable principle is a mere delusion.

The last time we raised the price of ale was in 1860, owing to the exceptionably high charges for malt and hops, but in the following year our prices were *reduced* to the former rate. The previous time was in 1854, and was owing to the war duty placed on malt; when relieved from that duty we reduced our prices proportionately.

Then the enterprise, the capital and industrial energy of the trade, have nothing to do with the result! It is to the policy of the Midland Company we owe it.

1. What! to have charged us for years upon over one-third of our business, viz., to London, from 4½ to 95 per cent. higher than from other stations on the Midland to London, and even in excess of what we did the work for by canal in 1845.

2. To charging on another third, viz., to London and North Western and Midland stations, rates from 10 to 105 per cent. higher than our neighbour was paying for the same services to London and North Western stations, although, as we have seen, Mr. Allport knew of the rates prior to four years ago, to be in consequence enabled to keep up high rates to their Midland stations, many of which, as well as those on the London and North Western, were above the maximum rates allowed by Parliament.

3. To securing to themselves upon other third of our traffic a cartage terminal of 4*s.* (keeping the same a strict secret from us), while we performed the cartage for which they received payment.

4. To suffering us for three years to do the work of a railway station on our own premises, loading, unloading, and hauling our goods with our own men and engines, without a terminal allowance of any kind, charging during this period precisely the same rates as previously when such work was done at the railway premises. If they did not know Allsopp's were having 1*s.* 1½*d.*, the Midland being parties to similar allowances elsewhere, knew, at all events, something was due to us, we being at that time quite unaware that we should be paid for such services.

Are these among the acts which enable Mr. Allport to speak "fearlessly?" From the further effects of such policy we pray the intervention of this Commission to protect our trade in the future.

Adverting to the charge made in our memorial under the head of "Favouring Rates," we would draw the attention of the Royal Commission to the fact that, assuming for a moment the Midland Company knew nothing of the secret rates, their joint carriers, the London and North Western Company, were perfectly aware they were all along participating in higher rates upon our trade than upon that of our neighbour, and beg to submit that the charge against the present system and our representations of the abuses, which can be practised by the companies under cover of their great powers, still remain unimpaired. We would also respectfully beg attention to Mr. Cosgrove's reply to answer 16,930 with respect to the 2*s.* 6*d.* terminals, and express our hope that if no special legislation on the subject be in contemplation, you may recommend that the terminal clause of the Railway Companies Arbitration Act of 1859, which depends for its operation upon being inserted in special Acts, may be embodied in a general Act applicable to all railways.

We have the honour to be,
My Lords and Gentlemen,
Your obedient servants,

Bass, Ratcliff, & Gretton.

To the Royal Commissioners on Railways.

Burton-on-Trent, 30th October 1866.

APPENDIX DZ.

LETTER from Mr. W. MALCOMSON on IRISH RAILWAYS.

To his Grace the DUKE of DEVONSHIRE.

Mayfield Factory, Portlaw, Ireland,
February 2, 1867.

MY LORD,

I THINK the circumstances which have occurred in Ireland within the past week justify me in again addressing your Lordship on the subject upon which I was examined before the Commission on Railways.

I enclose herein copies of newspapers containing reports of the proceedings at the Mansion-house meeting (a large and most influential meeting), and of the presentation of the addresses to his Excellency the Lord Lieutenant, and I venture to call the attention of the Commission over which you so ably preside to some of the facts which have been since elicited.

The Irish railways represent an expenditure of 26,395,100*l.*, which, as valued by Mr. Dargan, are now worth 22,000,000*l.* Their management is so subdivided that there are 66 railway boards, comprising over 400 directors, while there are several English railways with nearly double the capital of the whole of Ireland managed by a single board, one of these, the London and North-western, has a capital of over forty millions, and its working expenses are only 43 per cent. of the receipts, while those of the Irish railways last year averaged 47 per cent. of the receipts. The amalgamation of the Irish railways would therefore lead to a great reduction in the working expenses, some of those well informed on the subject estimate it at 10 per cent. of the receipts, or 170,000*l.* per annum.

The total receipts in 1865 were 1,737,061*l.* The amount absorbed by working expenses was 809,914*l.* (which may be considerably reduced), and the net receipts after payment of working expenses, 927,000*l.*

If a Government stock was created for 22,000,000*l.* (the amount of Mr. Dargan's estimate) at 3½ per cent., it would enable the Government to purchase the whole of the Irish railways, and the annual interest on it, 770,000*l.*, would be less by 157,000*l.* than the net receipts of 1865. If the saving in working expenses by the amalgamation were only seven per cent., the balance at the disposal of Government would be about 300,000*l.* per annum, and it might be applied to the two objects, first an extension of railways into those districts not yet accommodated, and second, the reduction of rates and fares.

Single lines of railroad may be constructed in most localities* for 7,000*l.* per mile; if 100,000*l.* per annum, one-third of the sum which I think would be placed at the disposal of Government, were devoted to this object, it would enable it to add 400 miles to the existing railways, even supposing the net receipts from these branches were *nil*.

There would remain 200,000*l.* per annum towards the reduction of rates and fares, and as it is proved that any reduction is followed by an increase of travelling, I think a diminution of 20 per cent. might be made in Irish railway charges without placing a deficit at the wrong side of the account.

I remain, &c.
WILLIAM MALCOMSON.

* 400 miles at 7,000*l.* per mile = 2,800,000*l.* 100,000*l.* per annum at 3½ per cent. represents a capital of 2,860,000*l.*

APPENDIX EA.

COMMUNICATION from the LORD MAYOR of DUBLIN, giving PROCEEDINGS of a PUBLIC MEETING on RAILWAY REFORM.

Mansion House, Dublin,
February 2, 1867.

MY LORD DUKE,

I HAVE the honour to transmit herewith a copy of the resolutions and memorial adopted at a meeting held at the Mansion House on Wednesday, the 30th ultimo.

The constitution of the meeting is indicated by the requisition, which embraced noblemen, members of Parliament, lieutenants of counties, mayors, chairmen of town commissioners, &c. from all parts of Ireland. The attendance was numerous, and the meeting unanimous.

I venture to suggest to your Grace that it might be well to insert the memorial addressed to his Excellency the Lord Lieutenant in any appendix to the evidence, which the Commission on Railways, over which you preside, may publish. It is the expression of the opinion of a large and most influential representative assembly of intelligent gentlemen.

I have, &c.
WM. LANE JOYNT,
Lord Mayor.

To His Grace
The Duke of Devonshire.
&c. &c.

RAILWAY REFORM.

TO THE RIGHT HON. THE LORD MAYOR OF DUBLIN.

MY LORD,

WE, the undersigned, request you will convene a public meeting, previous to the meeting of Parliament, to consider what steps should be taken to procure a reduction in the rates and fares for transit upon Irish railways.

BOWMONT.
ORMONDE.
WATERFORD.
BANDON.
ERNE.
CRICHTON.
DUNBOYNE.
DUNSANY.
KEANE.
✠D. O'BRIEN, R.C. Bishop, Waterford.
JAMES POWER, Bart., M.P.
JAMES ANTHONY LAWSON, M.P.
EDWARD SULLIVAN, M.P.
RICHARD ARMSTRONG, M.P.
JOHN GRAY, M.P.
GEORGE C. COLTHURST, Bart., M.P.
HENRY B. BERNARD, M.P.
N. D. MURPHY, M.P.
JOSEPH NEALE M'KENNA, M.P.
EDWARD L. SYNAN, M.P.
GEORGE GAVIN, M.P.
HENRY W. BARRON, Bart., M.P.
JOHN A. BLAKE, M.P.
JOHN ESMONDE, M.P.
JOHN BAGWELL, M.P.
J. LYSTER O'BEIRNE, M.P.
W. H. COGAN, M.P., D.L.
HENRY A. HERBERT, M.P.
ROBERT TORRENS, M.P.
ARTHUR KAVANAGH, M.P.
WILLIAM STACKPOOLE, M.P.
CHARLES R. BARRY, M.P.

And many other names too numerous for insertion.

In compliance with the above requisition I hereby convene a public meeting for Wednesday next, the 30th instant, at one o'clock, at the Mansion House, for the purpose of considering what steps should be taken to procure a reduction in the rates and fares for transit on Irish railways.

WM. LANE JOYNT,
Lord Mayor.

Mansion House,
January 26, 1867.

RAILWAY REFORM.

At an important and most influential meeting of the nobility, gentry, merchants, and people of Ireland, convened under a requisition signed by nine peers, twenty-seven members of Parliament, by lieutenants of counties, deputy-lieutenants, magistrates, mayors, chairmen of town commissioners, and others, and held in the Mansion House, in the city of Dublin, on the 30th day of January 1867.

The Right Honourable WILLIAM LANE JOYNT, Lord Mayor of Dublin, in the chair.

The following resolutions were unanimously adopted:—

Proposed by William Malcomson, Esq.; seconded by John Greene, Esq., J.P., Mayor of Wexford:—"That Michael "Angelo Hayes, Esq., do act as secretary."

Proposed by Lord Dunboyne; seconded by Sir Benjamin Morris, D.L., J.P., Mayor of Waterford:—"That this "meeting is of opinion that greater railway accommoda- "tion would tend to increase the employment of the "population, develop the resources of the country, and "contribute largely to the well-being of the people of "Ireland."

Proposed by Peter Tait, Esq., the Mayor of Limerick; seconded by James L. Naper, D.L., J.P.:—"That this

" meeting is of opinion that the investments in Irish rail-
" ways are as large, in proportion to the commercial capital
" of the country, as in any other portion of the United
" Kingdom; but that this outlay has been less remunerative
" to the shareholders, and therefore railway companies
" cannot make the needful reduction in the charges for
" conveyance of goods and passengers. The purchase of
" Irish railways by the State would enable it to extend the
" system and reduce the charges without ultimate loss."

Proposed by Joseph T. Pim, Esq., Dublin; seconded by J. O'Hara, Esq., J.P., D.L., Chairman of the Galway Town Commissioners:—"That this meeting is of opinion that the
" amalgamation of the Irish railways and the completion of
" the railway system may be advantageously carried out by
" putting in force the Act of 1844 for the purchase of
" railways by the Lords Commissioners of the Treasury,
" and that such amalgamation would greatly diminish the
" working expenses."

Proposed by T. M'Carthy Downing, Esq., J.P., Chairman of the Skibbereen Town Commissioners; seconded by Henry Lyons, Esq., Mayor of Sligo:—"That the capital invested
" in Irish railways was, on the 31st December 1865,
" 26,395,100*l.*; the traffic receipts for 1865, 1,735,061*l.*;
" and the net receipts, after payment of working expenses,
" 927,147*l.*, or at the rate of 3*l.* 10*s.* per cent. That the
" working expenses may be considerably reduced by amal-
" gamation, and that there would be no ultimate loss were
" the rates considerably lessened; and that a diminution in
" the tariff would be a great boon to the agricultural and
" commercial classes."

Proposed by John Greene, Esq., J.P., the Mayor of Wexford; seconded by Alderman John Reynolds, J.P., Dublin:—"That the funds available for dividend will enable
" Government to deal liberally with railway proprietors, and
" that the purchase may be effected upon equitable and
" reasonable terms."

Proposed by Sir John Gray, M.P.; seconded by the High Sheriff of Waterford:—"That a memorial expressive of the
" views of this meeting be presented to his Excellency the
" Lord Lieutenant; and that the members of Parliament,
" the representatives of the various municipalities, and
" others present, be requested to attend at the castle to-
" morrow to present same." *See memorial annexed.*

Proposed by Marcus Goodbody, J.P., Clara; seconded by Cornelius Dennehy, T.C., Dublin:—"That a similar
" memorial to the Right Hon. the Earl of Derby be adopted,
" and that the Irish peers, members of Parliament, and
" the following gentlemen be appointed to present the same,
" and press the views of this meeting upon his attention:
" —The Lord Mayor; the Mayors of Limerick, Waterford,
" Sligo, Clonmel, and Wexford, and that they have power
" to add to their numbers."

Proposed by Colonel Knox Gore, Lieut., co. Sligo; seconded by James Galway, J.P., High Sheriff, co. Waterford:—"That the co-operation of the various municipal
" and public bodies in Ireland be and it is hereby solicited
" and they are requested to adopt memorials to Lord Derby,
" and to petition Parliament in favour of the purchase of
" the railways by the State."

Proposed by Edmond Woods, Esq., J.P., Mayor of Clonmel; seconded by M. A. Anthony, Esq., J.P., Chairman of the Dungarvan Town Commissioners:—"That the various
" directors of railway companies in Ireland be requested to
" co-operate with us in promoting the objects of this
" meeting."

Proposed by Edward Fox, Esq., J.P., Dublin; seconded by John Barrington, D.L., J.P., Dublin:—"That the
" thanks of this meeting be given to the press of Ireland
" for the valuable aid they have rendered to this movement,
" and that they be requested to continue their efforts until
" the objects in view be accomplished."

William Lane Joynt, Lord Mayor,
Chairman.

Proposed by Colonel Knox Gore, Lieutenant, co. Sligo; seconded by John C. Bloomfield, Esq., J.P., D.L., co. Fermanagh:—"That the Lord Mayor do leave the chair,
" and that Lord Dunboyne be called thereto, and that the
" marked thanks of the meeting be given to the Right
" Honourable the Lord Mayor for his dignified conduct in
" the chair, and for the zeal and energy he has shown in
" promoting the object of this meeting."

Dunboyne, Chairman.

M. Angelo Hayes, Secretary.

His Excellency the most noble James Marquis of Abercorn, Lord Lieutenant and Governor-General of Ireland.

May it please your Excellency,—

The Memorial of the Lord Mayor of Dublin, and the Nobility, Gentry, and People of Ireland, convened at a Public Meeting at the Mansion House, in the City of Dublin, on the 30th January 1867,

Respectfully showeth,

That your memorialists are of opinion that the condition of Ireland and the diminution of the national wealth demands the serious consideration of Government, and they believe that a large extension of railway accommodation would greatly contribute to develop the resources of Ireland, and promote the well-being of the people.

That private enterprise has endeavoured to provide railways for Ireland, and that the investments have been larger, in proportion to its commercial capital, than in any other portion of the United Kingdom, but the accommodation still falls short of the requirements of the country.

That Parliament had passed measures in 1846 for the construction of over fifteen hundred miles of railways in Ireland; but owing to the famine, and other causes, a long period elapsed before they were completed, and in 1857 not much more than one thousand miles of railway were opened in Ireland.

That owing to circumstances beyond the control of the projectors, railway undertakings in Ireland, with few exceptions, have not been so remunerative as to induce the investment of sufficient capital to complete the chain of communication essential to the success of the whole system.

Your memorialists believe that the Irish railways would have been more remunerative but for the following causes:—

1st. The non-existence of manufactures to any considerable extent, arising remotely from former legislation, which crushed certain branches of employment for which Ireland was peculiarly adapted; and immediately from the visitation of Providence in the famine years, which reduced the population and exhausted the capital of the country to an extent unparalleled in the history of any other nation within a similar period.

2nd. The reduction of duty upon foreign corn inflicted a heavy blow to Irish agriculture, greatly lessened the growth of grain, diminished the employment for labour, almost annihilated the corn-milling trade (one of the staple manufactures of the country), and largely lessened the anticipated carrying trade of railways, without conferring similar advantages to those which resulted to England.

3rd. The feeling of insecurity caused by the insurrectionary movement of 1848, and the continued manifestations of disaffection developing in the Fenian conspiracies of the last two years, prevented the investment of capital in the establishment of manufactures and other similar means of employment of the population.

4th. The great increase of taxation. "The additions
" made to the imperial taxation," says the Report of the Committee of 1865, "have been proportionably
" heavier than those made to the taxation of Great
" Britain;" has withdrawn from Ireland the capital which, had it been expended in reproductive employment, would have increased the traffic upon railways.

Your memorialists find that the Legislature, by the Act of 1844, empowered the Lords of the Treasury to purchase railways after a lapse of 21 years, and they believe that the application of this Act to Ireland would be attended with great public advantage. It would save the immense waste of resources which result from the extreme division and subdivision of these interests by the amalgamation of the whole under one board, whose capital and receipts would not be as large as that of many single concerns of the same kind in England. The saving of expense thus effected might be devoted to the reduction of the charges for conveying goods and passengers.

They believe that a reduced tariff of rates and fares, and the extension of railways, would open up new markets for the animal vegetable products, which are slowly replacing the cultivation of grain; that many of these commodities rapidly deteriorate, and require cheap and rapid conveyance; that a diminution in the charge for transit would improve the culture of the soil and increase the supply of food, thus contributing to the wealth of Ireland and the benefit of the empire.

That these important changes cannot be effected without the aid of Government, and that the purchase of all the

Irish railways by the State, upon equitable terms, would enable it to initiate a system essential to the resuscitation of Ireland and productive of vast social and economic benefit.

That such purchase would not involve any loss to the revenue. It appears that the capital in Irish railways, on the 31st December 1865, was 26,395,000*l.*, and the net receipts, after the payment of the working expenses, 927,147*l.*, or at the rate of 3*l.* 10*s.* per centum. The working expenses might be materially reduced by amalgamation, and a large reduction might be made in the rates and fares with as fair a prospect of repayment as in Belgium.

They desire particularly to call your Excellency's attention to the fact that the Imperial Government has sanctioned important encouragement for the construction of railways in India and Canada, and they respectively submit that the peculiar disadvantages which Ireland has had to contend against, and from the effects of which she is still suffering, entitle her to as much consideration for the development of her resources as has been shown for the distant portions of the empire.

In conclusion, your memorialists most respectfully urge on your Excellency, that the severe losses which Ireland has sustained by the famine, the slow adaptation of agriculture to the altered condition of the country, the absence of mineral wealth and of extensive manufactures, and the smaller means of her people entitle her to Governmental consideration.

They earnestly trust that your Lordship will recommend to the Government you represent to introduce measures into Parliament for the purchase of the Irish railways, and by thus promoting its improvement strengthen the ties which unite the separate, but component parts of this great empire.

WILLIAM LANE JOYNT,
Dated in Dublin this Lord Mayor.
30th day of January 1867.

APPENDIX EB.

RESOLUTIONS adopted at various TOWNS in Ireland, with reference to RAILWAY REFORM.

ANTRIM.

MEETING OF TOWN COMMISSIONERS, 7th Jan. 1867.

1st. Resolved,—That in the opinion of this meeting the period has arrived when the Government should be called on to carry into effect the principles embodied in the Railway Act of 1844, so far as regards the purchase of the Irish lines by Government.

Moved by Mr. Wm. Vance, seconded by Mr. J. Taggart.

2nd. Resolved,—That no measure of railway reform will be complete or satisfactory that shall not provide for a very large reduction in fares and charges and uniformity of management throughout the whole of Ireland.

Moved by Mr. M'Lorinan, seconded by Mr. Moore.

3rd. Resolved,—That inasmuch as Ireland alone would derive any benefit from the proposed change, it is the opinion of this meeting that neither England nor Scotland should be called on to bear any part or share of the expense or loss that thereby might be incurred.

Moved by Mr. Moore, seconded by Mr. M'Lorinan.

4th. Resolved,—That copies of these resolutions be forwarded to the Lord Lieutenant, the Royal Railway Commission, and the members for the county and the boroughs situated within the county and that the members be requested to give their support to any well-digested scheme of railway reform which Her Majesty's Government may propose.

Moved by Mr. Taggart, seconded by Mr. Wm. Vance.

ARMAGH.

PUBLIC MEETING, December 1866.

At a Meeting of the Inhabitants of the City of Armagh.
John G. Winder, Esq., J.P., in the chair.

1st. Proposed by Joseph Kidd, Esq., J.P., seconded by — Armstrong, Esq., Resolved, That in the opinion of this meeting the period has arrived when the Government should be called on to carry into effect the Railway Act of 1844, for the purchase of the railways by Government, so far as it affects the Irish lines.

2nd. Proposed by Samuel Gardner, Esq., J.P., seconded by William R. Ferris, Esq., Resolved, That no measure of railway reform will be complete or satisfactory which shall not provide for a very large reduction in fares and charges and uniformity of management throughout the whole of Ireland.

3rd. Proposed by J. S. Riggs, Esq., seconded by John McWatters, Esq., Resolved, That considering the great benefits which this measure would confer on all classes in this country, this meeting consider it but equitable that England and Scotland should be guaranteed by Ireland against any loss in carrying the Act into operation.

4th. Proposed by Jacob Orr, Esq., seconded by Dr. Leslie, Resolved, That copies of these resolutions be forwarded to Government and the Royal Railway Commissioners, and that the members for the county and the member for the borough be requested to give their support to carry into effect the Railway Act of 1844 so far as regards Ireland.

BALLYMENA.

PUBLIC MEETING, 15th November 1866.

James B. Patrick, Esq., in the chair.

Mr. White proposed the following resolution:—That, in the opinion of this meeting, the period has arrived when the Government should be called on to carry into effect the principles embodied in the Railway Act of 1844, for the purchase of the railways by the Government, so far as regards the Irish lines; and that a representation to that effect be made to the Royal Railway Commission.

Mr. Chesney seconded the resolution, which was carried unanimously.

Mr. Caruth proposed the second resolution:—That no measure of railway reform will be complete and satisfactory which shall not provide for a very large reduction in fares and charges and uniformity of management throughout the whole of Ireland.

Mr. Craig seconded the resolution, which was unanimously adopted.

Dr. Black proposed the following resolution:—That, in the opinion of this meeting, neither England nor Scotland should be called on to make up any loss that might arise from the reduction of a low scale of charges; such deficiency to be made up by Ireland alone.

Mr. Simpson seconded the resolution, which was also adopted.

BALLYMONEY.

MEETING OF TOWN COMMISSIONERS, 7th November 1866.

SIR

I SEND you on other side copy of resolutions unanimously agreed to by the Commissioners at their meeting on the 7th inst.

I have, &c.
(Signed) T. B. HAMILTON,
William Pole Esq. Clerk of Commissioners.

1st, That this Board is of opinion that carrying out the Railway Act of 1844, so far as it applies to the purchase of railways in Ireland, their consolidation under one management, and the adoption of a lower and uniform tariff would be of the greatest benefit to Ireland.

2nd, That we are of opinion that any loss that might be incurred in carrying out the Act should be paid by Ireland alone.

3rd, That these resolutions be forwarded to the Royal Commission and to the Lord Lieutenant.

BALLYSHANNON.

PUBLIC MEETING, 10th Dec. 1866.

Edward Chism, Esq., in the chair.

Moved by Wm. Green, Esq., seconded by M. Mulheran, Esq., and carried unanimously,—

1st. Resolved, That in the opinion of this meeting the period has arrived when the Government should be called

upon to carry into effect the Railway Act of 1844, for the purchase of the railways by Government, so far as regards the Irish lines.

Moved by Mr. John Myles, seconded by Mr. J. Stephens, and carried unanimously,—

2nd. Resolved, That no measure of railway reform will be complete or satisfactory which shall not provide for a very large reduction in fares and charges and uniformity of management throughout the whole of Ireland.

Moved by A. Green, Esq., seconded by Mr. T. McGlain and carried unanimously,—

3rd. Resolved, Inasmuch as it is intended to apply this Act in the first instance in Ireland alone, it is but just that England and Scotland should be guaranteed against any loss.

Moved by Mr. McFadden, seconded by H. Coane, Esq., and carried unanimously,—

4th. Resolved, That copies of these resolutions be forwarded to Government, the Royal Railway Commission, and the members for the county; and that the latter be requested to give their best support to any well-digested scheme of railway reform the Government may propose.

Moved by John Welsh, Esq., M.D., seconded by Mr. John Sadd, and carried unanimously,—

5th. Resolved, That the thanks of this meeting be given to Mr. Galt for the explanation he has given of the Act of 1844 and the benefits this country would derive from it adoption.

BELFAST.

Chamber of Commerce.

Sir, Chamber of Commerce, Belfast, 26th Jan. 1867.

I am instructed by the Council of the Belfast Chamber of Commerce to hand you copy of a resolution passed at a special meeting held this day.

I am, &c.,

John Lyth,
President.

Copy of Resolution.

That, in the opinion of this Council, it would be most conducive to the interests of Ireland for Government, under the authority of Parliament, so to remodel the administration of the Irish Railways, as to provide for united management, with the view of ultimately obtaining a greater reduction of charges; and that it would be for the interest of Ireland to consent to defray the temporary loss incurred thereby, if any, by an additional to either the general or local taxation of Ireland."

Public Meeting, 17th Oct. 1866.

At a meeting held in the Town Hall, Belfast, on Monday, the 17th October, of the members of the Town Council, the Harbour Commissioners, the Chamber of Commerce, and the directors of the local banks and railways:

Mr. Charles Duffin, President of the Chamber of Commerce, in the chair.

Mr. W. D. Henderson was requested to act as secretary.

The following resolutions were agreed to:—

Moved by Joseph J. Murphy, Esq., seconded by Sir Edward Coey, and unanimously carried,—That this meeting is of opinion that the interests of Ireland require the interposition of Government, in accordance with the principles of the Act of 1844, for the purpose of dealing with the Irish railways in such a way as would lead to a substantial reduction in fares and charges, and to greater efficiency and uniformity in management.

Moved by Wm. Dunville, Esq., seconded by Charles W. Shaw, Esq., and carried unanimously,—That it would be for the benefit of this country that should any temporary loss be incurred, under the authority of Parliament, by a reasonable reduction of fares and charges, such loss should be borne by Ireland.

Moved by Captain George Gray, J.P., seconded by W. L. Finlay, Esq., and carried unanimously,—That the secretary be requested to transmit a copy of these resolutions to his Excellency the Lord Lieutenant, to the secretary of the Railway Commissioners, and to the borough members.

Moved by Alderman Lindsay, seconded by William Dobbin, Esq., and unanimously carried,—That a committee consisting of the mayor, chairman, the movers and seconders of resolutions, and the secretary, with power to add to their number, be appointed to take such further steps as may be necessary to carry out the objects of these resolutions.

COLERAINE.

At a Public Meeting, which was held in the Town Hall, Coleraine, on Tuesday, the 23rd October 1866,

To consider the propriety of urging upon Her Majesty's Government the policy of purchasing the railways of Ireland, for the purpose of an extensive reduction of fares and charges and working all the lines upon one uniform system for the good of the public, the following resolutions were unanimously adopted:—

Moved by Griffith C. Galt, Esq., seconded by William Galt, Esq., and resolved,—That William Cavin, Esq., M.D., chairman of the Borough Commissioners of Coleraine, be called to the chair.

Moved by William Warke, Esq., seconded by Daniel Taylor, Esq., J.P., and resolved,—That, in the opinion of this meeting, the period has arrived when the Government should be called upon to carry into effect the principles embodied in the Railway Act, of 1844, for the purchase of the railways by the Government, so far as regards the Irish lines.

Moved by Alexander Barklie, Esq., J.P., seconded by James C. L. Carson, Esq., M.D., and resolved,—That no measure of railway reform will be complete or satisfactory which shall not provide for a very large reduction in fares and charges and uniformity of management throughout the whole of Ireland.

Moved by S. M. Greer, Esq., seconded by Drummond Grant, Esq., and resolved,—That, considering the great benefit which all classes in this country would derive from such a reform, it is only just that Ireland should guarantee the payment of the dividend on the Government stock to be opened for the purchase of the Irish railways.

Moved by William Galt, Esq., seconded by A. M'Elwaine, Esq., and resolved,—That, until the Railway Commission have made their report, the Government cannot be expected to determine in what manner the principles of the Act of 1844 should be carried into effect in Ireland.

Moved by Edward Gribbon, Esq., seconded by William Ellis, Esq., and resolved,—That copies of the resolutions of this meeting be forwarded to the Government and the Railway Commission, and that we invite all classes throughout Ireland to call upon the Government to take action in the matter.

Moved by Alexander Barklie, Esq., J.P., seconded by Rev. Joseph Macdonnell, and resolved,—That this meeting cannot separate without expressing their gratification that a townsman of their own, Mr. William Galt, should have originated the idea of railway reform, and that if this country obtain the great boon which an improved system of railway management would confer, it will be mainly owing to his exertions and perseverance.

Wm. Cavin, M.D., Chairman.

Moved by Sir H. H. Bruce, Bart., M.P., seconded by Henry Kyle, Esq., J.P., and resolved,—That William Cavin, Esq., now leave the chair, and that John Adams, Esq. J.P., be called thereto.

Moved by G. C. Galt, Esq., seconded by Alex. Barklie, Esq., J.P., and resolved,—That the best thanks of this meeting are due, and are hereby given, to Dr. Cavin, for his dignified and proper conduct in the chair.

John Adams, Chairman.

ENNISKILLEN.

Public Meeting, 19th December 1866.

High Sheriff of Fermanagh in the chair.

1st. Resolved, That in the opinion of this meeting the time has arrived when Government should be called on to carry into effect the principles contained in the Railway Act of 1844, for the purchase of the Railways by Government, so far as regards the Irish lines.

Proposed by William Orchard, Esq., seconded by Mr. Samuel Gamble.

2nd. Resolved, That no measure of railway reform will be complete or satisfactory which shall not provide for a very large reduction in fares and charges and uniformity of management throughout the whole of Ireland.

Proposed by John Collum, Esq., seconded by Mr. James Coalter.

3rd. Resolved, That inasmuch as the reduction in fares and charges will be confined to Ireland alone, it is but just that England and Scotland should be guaranteed against any loss by having the Act carried out in this country.

Proposed by Mr. Edward Gamble, seconded by Mr. Thomas Johnston.

4th. Resolved, That copies of these resolutions be forwarded to the Lord Lieutenant and to the Royal Railway

Commission, and that the members for the county and the member for the borough be requested to give their support to any well-digested scheme of railway reform that Government may propose to Parliament.

Proposed by Mr. P. Barmon, seconded by Mr. William Corney.

LETTERKENNY.

Public Meeting, November 1866.

To His Grace the Duke of Devonshire, K.G., &c., &c., Chairman of the Royal Railway Commission.

My Lord Duke,

We, the undersigned noblemen, gentlemen, traders, and others of the County Donegal, Ireland, are of opinion that the period has arrived when the Government should be called upon to carry into effect the principles embodied in the Railway Act of 1844 for the purchase of the railways, so far as regards the Irish lines; and we are further of opinion that no measure for railway reform would be satisfactory that would not provide for a very large reduction in fares and charges, and that any temporary loss that might be incurred should be borne by Ireland alone; and the memorialists believe that no measure would confer greater benefit on the country or be more popular with the Irish people.

LIMERICK.

Public Meeting, 2nd February 1867.

Alderman Mahony took the chair.

Mr. Synan, M.P., moved the first resolution that this meeting is of opinion, that the reduction of the rates and fares of railway transit would increase the means of intercommunication, would be a great public benefit, and materially contribute to the agricultural progress of Ireland.

Alderman M'Donnell seconded the adoption of the resolution.

The High Sheriff moved the adoption of the second resolution recommending the purchase of the Irish railways by government.

Mr. Ryan, of Bruree, seconded the resolution which was agreed to.

Mr. MacSheehy moved that a memorial be presented to the Lord Lieutenant, and that a copy of it be sent to the Premier, and that the county and city members be urged to give it their most strenuous support.

Mr. Francis Harvey, of Cahir Abbey, seconded the resolution.

LONDONDERRY.

Public Meeting, 12th October 1866.

William Haslett, Esq., proposed, and R. W. Newton, Esq., seconded, the first resolution:—That, in the opinion of this meeting, the period has arrived when the Government should be called upon to carry into effect the principles embodied in the Railway Act of 1844, for the purchase of Railways by the Government, so far as regards Irish railways.

Isaac Colhoun, Esq., proposed, and S. M. Greer, Esq., seconded, the next resolution, as follows:—That, while we desire to leave the Government perfectly free to determine in what way these principles should be carried into effect, this meeting is of opinion that no measure of Railway Reform will be complete which does not provide for a substantial reduction of fares and charges and uniformity of the whole Irish system.

Proposed by Alderman Wm. M'Carter, and seconded by James Corscaden, Esq.,—That, considering the great benefit which all classes in this country would derive from uniformity of management and low fares and rates, it is the opinion of the meeting that if the Government bring forward such a measure for the reform and management of Irish railways as would meet the wants of the Irish people, whatever temporary loss the change might involve should be made up by relieving railroads from local taxation, and by a special provision applicable to the country to supply the deficiency.

Proposed by John Cooke, Esq,, and seconded by William Tillie, Esq.,—That a memorial, embodying the principles of the foregoing resolutions, be drawn up and presented to the Government and the railway companies, and that we call upon all classes throughout the country to co-operate with us in effecting such a desirable change.

Proposed by Mr. Haslett, and seconded by Councillor Greer,—That the mayor do get up a committee to look after the whole matter and collect funds to defray expenses.

MONAGHAN.

Public Meeting, 4th December 1866.

Railway Reform.

At a Public Meeting held in the County Court House,

Thomas Lucas, Esq., High Sheriff of Monaghan, in the chair.

1st. Resolved, That in the opinion of this meeting the period has arrived when the Government should be called

upon to carry into effect the principles embodied in the Railway Act of 1844 for the purchase of Irish railways by Government.

Proposed by Major Lloyd, Ballyleck, seconded by Capt. Thos. Coote, J.P., Brandrum.

2nd. Resolved, That no measure of railway reform will be complete or satisfactory which shall not provide for a very large reduction in fares and charges and uniformity of management throughout the whole of Ireland.

Proposed by John Faucett, Esq., J.P., Drumaconny, seconded by Mr. Rush, M.D., Monaghan.

3rd. Resolved, That considering the great benefit that all classes in this country would derive from such a reform, and that as neither England nor Scotland desire any change in the present system, nor that any reduction will be made on the fares and charges in those countries, it is only just and fair that England and Scotland should be indemnified against any loss.

Proposed by John C. McAdam, Esq., Mullinahinch, seconded by Edward F. Donnelly, T.C., Monaghan.

4th. Resolved, That those resolutions be forwarded to the Government and to the Railway Commissioners, and that our county members be requested to forward the object of the meeting.

Proposed by Richard Mitchell, Esq., solicitor, T.C., Monaghan, seconded by John Temple, Monaghan.

NEWTONARDS.

Public Meeting, 10th January 1867.

Moved by Mr. Mackintosh, seconded by Dr. Martin, and resolved, 1, That in the opinion of this meeting the period has arrived when Government should be called upon to carry into effect the principles contained in the Railway Act of 1844, so far as it applies to the purchase of the Irish lines by Government and the consolidation of all the railways under one management through Ireland.

Moved by Mr. George Walker, seconded by Mr. William M'Fadden, and resolved, 2, That no reform in the railway system will be complete or satisfactory which shall not provide for a large and uniform reduction of fares and charges throughout the country.

Moved by Mr. William Parr, seconded by Mr. James Moore, and resolved, 3, That inasmuch as the present measure does not contemplate the reduction of fares and charges in England and Scotland, any loss that may be incurred by bringing the Act into operation shall be borne by Ireland alone.

Moved by Dr. Woods, seconded by Mr. James M'Ilvenny, and resolved, 4, That copies of the resolutions should be forwarded to the Lord Lieutenant, the Royal Railway Commission, and the members of Parliament for the county; and that the latter should be requested to give their support to any well-digested scheme of railway reform that the Government may propose to Parliament.

Moved by Mr. William Dobbin, seconded by Mr. James Boyle, and resolved, 5, That the cordial thanks of this meeting are hereby tendered to William Galt, Esq., for the instructive and valuable address which he has just delivered on railway reform.

George Harrison, Chairman.

NEWTOWNLIMAVADY.

Public Meeting, 12th November 1866.

The High-Sheriff, C. T. M'Causland, Esq., in the chair.

Henry Tyler Esq., J.P., proposed the first resolution. Resolved,—That in the opinion of this meeting the period has arrived when the Government should be called on to carry into effect the principles embodied in the Railway Act of 1844, for the purchase of the railways by Government, so far as regards the Irish lines.

Wm. Haslett, Esq., J.P., Derry, seconded the resolution.

William Cather, Esq., Northern Bank, Newtownlimavady, moved the second resolution,—That no measure of railway reform will be complete or satisfactory which shall not provide for a very large reduction of fares and charges and uniformity of management throughout the whole of Ireland.

Hugh Lane, Esq., seconded the resolution.

George Proctor, Esq., moved the third resolution.

That, inasmuch as the direct benefit of this measure will be confined to Ireland, we think it but reasonable that Ireland should agree to any terms which the Legislature may deem just.

Sir H. H. Bruce, Bart., M.P., seconded the resolution.

Sir Frederick W. Heygate moved the fourth resolution,—That until the Railway Commission have made their report the Government cannot be expected to determine in what manner the principles of the Act of 1844 should be carried out.

Sir H. H. Bruce seconded the resolution.

John Alexander, Esq., proposed the fifth resolution,—That copies of the resolutions of this meeting be forwarded to the Government and the Railway Commission, and that the members for this county and the boroughs situated in the county be requested to support the objects of this meeting.

Robert Macrory, Esq., seconded the motion.

SLIGO.

Public Meeting, 6th December 1866.

First. Resolved, That in the opinion of this meeting, the period has arrived when the Government should be called on to carry into effect the principles embodied in the Railway Act of 1844, for the purchase of the railways by Government, as far as regards the Irish lines.

Moved by Mr. Monds, seconded by Mr. Kernaghan.

Second. Resolved, That no measure of railway reform will be complete or satisfactory which shall not provide for a very large reduction in fares and charges and uniformity of management throughout the whole of Ireland.

Moved by Mr. J. O'Connor, seconded by Mr. Conry.

Third. Resolved, That, considering the great benefit which all classes in this country would derive from such a reform and reduction of charges, it is only just that Ireland alone should bear the expense.

Moved by Colonel Whyte, seconded by Mr. J. G. Davis.

Fourth. Resolved, That copies of these resolutions be forwarded to Government, and to the Royal Railway Commission, and that the members for the county and the members for the borough be requested to give their support to any scheme that may be brought forward by Government that will effect a thorough reform of our railway system.

Moved by Mr. J. O'Connor, seconded by Mr. W. A. Woods.

F. A. Williams,
Chairman.

Zostère, par wagon complet de 5,000 kilogr., ou payant pour ce poids	4

* Conformément à l'article 10. les marchandises suivie d'un astérisque sont taxées moitié en sus de prix fixé par le tarif, lorsqu'elles ne pèsent pas 200 kilog. sous le volume d'un mètre cube ; cette augmentation n'est point applicable aux frais accessories.

Art. 8. Le plaqué d'or ou d'argent, les dentelles et les objets d'art (*statues, tableaux, bronzes d'art*), sont taxés *moitié en sus* du prix fixé par le tarif général pour les marchandises de la première série.

10. Les denrées et objets qui ne sont pas nommément énoncés dans le tarif du cahier des charges, et qui ne pèseraient pas 200 kilogrammes sous le volume d'un mètre cube, sont taxés *moitié en sus* des prix fixés par le tarif général, selon la série du dit tarif à laquelle ces objets appartiennent, sans que, dans aucun cas, la taxe à percevoir puisse être supérieure à celle qui résulterait de l'application du tarif simple au poids fictif calculé à raison de 200 kilogrammes par mètre cube.

11. Les matières inflammables ou explosibles, telles que, poudres à feu, fulminates, capsules, artifices, allumettes chimiques, phosphore, éther, et les objets dangereux pour lesquels des règlements de police prescriraient des précautions spéciales, sont taxés *moitié en sus* du prix fixé par le tarif général pour les marchandises de la première série.

12. Les prix du tarif sont augmentés *de moitié*, pour les masses indivisibles pesant de 3,000 à 5,000 kilog., et portés *au double* pour les masses indivisibles pesant plus de 5,000 kilog., mais ne dépassant pas 22,000 kilog., sans toutefois que, pour les masses de plus de 10,000 kilog. jusqu'à 22,000 kilog., les prix puisse être inférieur à 0 fr. 25 c. par tonne et par kilomètre.

La compagnie n'accepte pas le transport des masses indivisibles pesant plus de 22,000 kilogrammes, ni des objets dont les dimensions excèdent celles du matériel. La longueur normale du matériel affecté au transport des marchandises est de $6^{m}{\cdot}50$.

Si, nonobstant la disposition qui précède, la compagnie transporte des masses indivisibles pesant plus de 22,000 kilogrammes ou des objets dont les dimensions excèdent celles du matériel, elle devra, pendant trois mois au moins, accorder les mêmes facilités à tous ceux qui en feraient la demande.

Dans ce cas, les prix de transport seront fixés par l'administration, sur la proposition de la compagnie.

Dans toutes les gares d'expédition ou de destination où il n'existe pas de grues ou de treuils de force suffisante pour le chargement et le déchargement des masses indivisibles pesant plus de 5,000 kilogrammes, le chargement et le déchargement en seront faits par les soins et aux frais, risques et périls des expéditeurs ou des destinataires.

Appendix ED.

List of actual Rates per ton charged for certain Goods, between certain towns in England, and comparison of the same with the French Rates for corresponding distances.

The French Rates are taken from the published Book of Rates of the Chemin de Fer de l'Est for 1865. They are from station to station; *i.e.*, they include loading and unloading and station dues, but not collection and delivery.

The English Rates marked with an asterisk *include* collection and delivery within the Company's ordinary limits, and are not therefore strictly comparable with the French Rates. The Rates not so marked are from station to station.

(The Clearing House allowance for collection and delivery is 2*s.* 6*d.* per ton in the country and 7*s.* in London for each operation.)

(a) These rates are for town traffic. Considerable reductions are made for export and import.

Deducting from the English rates marked with an asterisk the clearing-house rates for collection and delivery, and taking the average of the whole in proportion to the mileage, the result is found as follows:—

	Average English Rate per Ton per Mile, Station to Station.	Average French Rate per Ton per Mile, Station to Station.
For the Goods comprised in Class 1 of the French Classification	3·37*d.*	2·60*d.*
" " Class 2 " "	1·66*d.*	2·29*d.*

Appendix EF.

Report of the Auditors of the London and North-western Railway Company.

Euston Station, London,
9th January 1867.

To the Shareholders of the London and North-western Railway Company.

The audit committee having at this time had under consideration the extent and the magnitude of the affairs of the London and North-western Railway, and believing that it would be desirable for the shareholders to know that the various financial departments are under effective control, have invited the auditors to describe in detail the steps taken to insure a complete and continuous audit of the accounts.

In accordance with this suggestion the auditors have prepared a comprehensive report, exhibiting no ordinary painstaking, in following out and verifying the several branches of finance, the issue of debentures, and of the company's shares and stock, and all the money transactions of your vast undertaking.

The report is itself an evidence how much the shareholders are indebted to the gentlemen who discharge the onerous and responsible duty of auditors, and the committee have requested the directors to cause it to be printed and circulated, trusting it will satisfy the shareholders, as it has the committee, that the accounts are faithfully kept, the dividends honestly earned, and that the undertaking is in a safe and sound condition.

On behalf of the audit committee,
Edward Smith,
Chairman.

London and North-western Railway,
Euston Station, 7th January 1867.

To the Shareholders' Audit Committee.

Gentlemen,

The secretary has made us acquainted with your request for information as to the mode and extent of the audit of the voluminous accounts of the company, and to this inquiry, so natural at the present moment of distrust, we have pleasure in replying—

That the main check, as between the board and its numerous servants, devolves of course on the large establishment at Euston called the audit office, headed by a responsible officer, who has eight in-door assistants, seven out-door inspectors, and a staff of 127 clerks, and is presided over by a special committee of the directors. The auditors from time to time satisfy themselves that the system of examination is complete, and that it is maintained in full efficiency: this they have every reason to believe is the case. In addition to the audit department there are at Euston station the chief accountant's, transfer, and cashier's offices—each under the charge of a responsible head, acting independently of, and forming a check upon, one another.

The verification made by the auditors, assisted by the public accountants, is therefore as between the board and the shareholders—its object being to ensure that the books are kept upon correct principles, that the published accounts are in accordance therewith, and that they honestly lay bare to the proprietors the true condition of the undertaking.

The responsibility of examining the cash disbursements devolves upon the public accountants, who, by means of their clerks, and in addition to the check exercised by the audit office, ascertain that there is a proper voucher for every payment (these are annually about 56,000 in number), and certify the same each half-year; they also examine the additions and postings of the traffic books, journals, ledgers, &c., and supply the auditors with a duly certified balance sheet, independent of that drawn up by the company's chief accountant.

The auditors themselves, however, carefully look through the abstract of the payments passed by the finance committee of the board, any entry out of the usual routine being noted, and the vouchers called for; they also scrutinize every entry in the journal and examine half-yearly each ledger account, so that the whole transactions of the company pass regularly under their review, and thus a complete and continuous audit is maintained.

They personally examine the debenture registers in the transfer office, and satisfy themselves that bonds are not issued in excess of the ascertained parliamentary powers, and that the cash actually received by the bankers, and entered in the accountant's ledger, corresponds with the amount of such issues. All paid-off bonds are produced to them, and duly cancelled.

The stock and share registers (kept also in the transfer office) are balanced twice a year; an abstract of the contents of each is laid before the auditors, who compare the same with the statement of capital raised, having previously checked the latter by the parliamentary powers, and verified it by the monies actually received by the bankers and at credit in the accountant's ledgers.

They also examine the entries passed to the credit of the dividend account of the London and North-western Railway, as well as of the subsidiary lines, in order to see that dividend is not paid upon capital in excess of the correct amount, as represented by the shares actually issued in each undertaking.

The details of the unpaid dividends and interest are likewise examined each half-year, and care is taken that the full amount of the outstanding liability in this respect is duly provided.

From the principal bankers the auditors receive direct and confidential statements of the cash balances, and from the country banks (13 in number), certified returns are laid before them, as evidence that the amounts of cash on hand, shown each half-year, really exist.

A considerable amount of attention is bestowed upon the large sums credited under the head of traffic, and a careful adjustment is periodically made in the accountant's office; which demonstrates that the company's agents and others have fully accounted for the monies earned at each of the 565 stations, the accuracy of the details of such earnings being duly tested by the audit office, who also certify that all settlements of traffic interchanged with other railway companies have been correctly made.

The rents due to the company, amounting to nearly £80,000 a year, also claim attention, the monies actually received being compared with the rent roll; and the accounts of the working of the Euston and Victoria and Holyhead Hotels are also examined. Care is also taken to see that proper dividends are received on all the shares held by the company in other undertakings.

The auditors also visit half-yearly, and oftener when needful, the large manufacturing and other centres of the company, at Crewe, Wolverton, Earlestown, Holyhead, Birmingham, Watford, and Stafford; they go through the books kept at these places, to satisfy themselves that the large sums there disbursed are properly accounted for, and that a due amount of repair and renewal is regularly executed, in order that the rolling stock, way and works may be constantly maintained in a full and efficient condition. They also require from the head of each department a certificate to this effect, as well as to the correctness of the stores under his charge; and as a further check upon the latter very important item an officer wholly unconnected with any of these departments is constantly employed in a careful stock-taking, with a view to ascertain that the amounts as shown in the half-yearly balance sheet are fully represented by stores actually in existence upon the company's premises.

The books of eleven subsidiary companies, which though more or less merged in the general undertaking, yet retain an organization of their own, receive the personal examination of the auditors, as also the books of the three lines held jointly with the Lancashire and Yorkshire Company, and of the five concerns in which the Great Western Company are partners. The accounts of two railways held jointly with the Manchester, Sheffield, &c. Company, and one with the Midland Company, also pass under their review.

The London and North-western ledgers are kept by double entry and upon the cash basis; that is to say, no entries are made until the monies actually appear in the bankers' pass books. This system, therefore, requires that at the end of each half-year the amount of the Company's revenue liabilities not discharged should be accurately ascertained and brought to the debit of the account. Large sums are thus charged and also credited, in anticipation of the actual payment or receipt of the monies, the details of which require and receive the careful attention of the auditors.

The charge for the stores, &c., consumed at Crewe and at the other large depôts, as also for the rails, &c., used by the permanent way department, is, however, always one month in arrear; the books, so far as materials are concerned, being closed one month earlier than the date of the printed half-yearly accounts. This is rendered needful in order that the adjustment of these voluminous details

may not delay the holding of the general meeting and the declaration of the dividend beyond the period fixed by Act of Parliament, but is amply compensated by the anticipation of the charge for the guaranteed dividends on the Lancaster and Carlisle, South Stafford, and Kendal and Windermere Railways; these dividends being paid up to the 31st January and the 31st July in each year, and being fully provided out of the earnings of the preceding half-years ending 31st December and 30th June. The large amount of interest payable on the debenture stock and bonds is also provided 15 days in advance, the date to which it accrues being so many days later than the expiry of the half-year in which the full amount is charged. Taken together these make very large figures, and have always been regarded by the auditors as more than sufficient to cover the above-named arrears of stores, and any other charges which (by accident or otherwise) may not have been fully brought against the half-year's revenue.

The capital account is very jealously watched, the disbursements being made almost entirely under the authority of estimates previously submitted to, and sanctioned by special resolutions of, the shareholders at the general meetings; each work, as voted, has a separate credit opened, against which the expenditure is charged monthly, until the whole operation is complete. This register is laid before the auditors, who inquire into any case where the outlay is materially in excess of the estimate sanctioned. Any capital money expended without having been thus previously voted is distinctly and separately shown in the half-yearly report, and nothing is allowed to be charged to capital which ought to devolve upon revenue; for when any doubt arises the debit is always carried to the latter account. As illustrating this principle the following instances are adduced:—

Since the year 1851 the whole charge for interest and dividends has been borne by the revenue account, without any regard being had to the amount of capital unproductively employed in new lines, &c., under construction, though this at times has been very considerable. The auditors have no hesitation in stating that during this period at least 500,000*l.* has been thus paid out of revenue.

No money raised by the sale or issue of shares at a premium is ever allowed to swell the amount of divisible profit, the capital expenditure being always reduced by such amounts; the sum now standing at the credit of capital under this head, arising out of the issue of the last 5 per cent. preference stock alone, being upwards of 240,000*l.*

The building of its own engines at Crewe has been very advantageous to the company. A comparison of the charge for the 256 added to the stock during the past four years with the prices which they would have cost if purchased shows a saving of capital outlay to the extent of at least 150,000*l.*; while the system which has so long prevailed of renewing, at the cost of revenue, the small original engines with more powerful machines, has also largely improved the company's property. During the last ten years 400 engines have thus been renewed, and an additional tractive power, equal, at the very least, to 100 engines, has been acquired without any charge to capital. In addition to the foregoing there are now 128 of the old engines, which though replaced by revenue, and standing on the books at their value as old materials only, are yet mostly at active work on the line, and represent a large additional value to the company's assets. The building and renewing of the carriage and waggon stocks have also been effected upon the same principle.

Additional tools and machinery to a considerable extent, also all the carts, horses, and other stock at work at the various stations on the line, have for many years past been supplied entirely at the cost of revenue.

The committee may have observed half-yearly charges against the revenue, under the head "Maintenance of Way," for additional works which might have been placed to the debit of capital. The original timber bridges have also been extensively renewed, during the last ten years, with structures of iron and stone or brick; and as no charge has ever been admitted to the capital account in this respect, sums large, but not easy to be estimated, have been defrayed by revenue. In the case of the Penmaenmawr Tunnel the old loose timber covering was last year replaced with a permanent roof of iron and stonework, at a cost of 9,438*l.* 15*s.* 11*d.*, and the St. Helen's Canal, recently taken over by the company, has been greatly improved, by means of an outlay of 24,600*l.* 6*s.* 5*d.* In neither instance was any charge made to capital.

In further elucidation the auditors would state that when largely increased traffic requirements compel the removal of original stations, and their replacement with more extensive premises, a liberal estimate is made of the cost of the buildings destroyed. This is defrayed out of revenue by instalments; the first being charged as soon as the working of the line receives the benefit of the improved accommodation. The most recent instance of this kind is that of the large sheds at Camden, towards the construction of which revenue has contributed 15,000*l.*, spread over the last three half-years.

With the exception of the "Renewal of Road Suspense Account," of very remote origin (regularly shown on the face of the half-yearly accounts), now reduced to 37,668*l.* 9*s.* 10*d.*, and in course of steady liquidation upon a scheme approved by the proprietors, there are no arrears of expenditure which can be brought hereafter against revenue. The heavy annual charge to revenue for parliamentary expenses is mainly due to the fact, that except when Acts are obtained authorizing the construction of branch lines no charge whatever is made to capital account. The long standing arrear of these expenses is at last, however, about cleared off, and care will be taken to prevent any future accumulations.

The insurance and depreciation funds present favourable results. The "Fire Insurance" account, after allowing for the late losses, will still show a balance of upwards of 30,000*l.* to the credit. The "Steam-boat Insurance and Depreciation Funds" amount to 130,000*l.*, and have been invested in the purchase of five steamers, now actively at work, and replacing two of the inferior original boats; while the other two original steamers have also been enlarged and improved at the cost of these funds: but over and above all this there is still in hand a free balance of 16,000*l.*

Many similar instances might be mentioned; but the auditors believe that they have now stated enough fully to demonstrate the system that prevails, and to convince the committee that complete reliance may be placed upon the truthfulness of the company's accounts.

The auditors avail themselves of this opportunity of announcing the resignation of Mr. J. E. Coleman, and the appointment in his stead of Messrs. Price, Holyland, and Waterhouse as the public accountants, to assist the auditors, in accordance with the resolution of the proprietors at the half-yearly meeting held 21st February 1851.

HENRY CROSFIELD,
R. W. HAND, } Auditors.

Appendix EG.

Examples, extracted from the Evidence, of actual Charges made for Goods between certain Places, showing also the Rates per Mile when the Terminals allowed by the Clearing House are eliminated.

(*a.*) In these cases an extra amount is added to the terminal for carting through London.
(*b.*) In these cases the terminal is not taken from the Clearing House rates, but is given specially by the railway authorities.

Distance.	From and to.	Commodity.	Gross Charge.	Gross Charge reduced to a Mileage Rate.	Terminal to be deducted as allowed by the Clearing House.	Net Charge after deducting the Terminal.	Net Charge reduced to a Mileage Rate.

Appendix EH.

Reply of the North British Railway Company to the Charges of Delay in Appendix DX.

General Manager's Office.
Sir, Edinburgh, March 5, 1867.

I am desired to acknowledge the receipt of your letter of the 28th ultimo, (accompanied by a print of Appendix DX. of the Royal Commission on Railways,) and in reply to state that the complaints set forth in the appendix referred to, although in some cases represented to be distinctly against the North British Railway Company, it will be apparent, do not necessarily lie against that company; and, in point of fact, where there is just ground for complaint, it is not against the North British Company that the complaints do properly lie.

It will be noticed on reading the statement that, with one exception only, the delays are between places in Scotland, and places in the midland or southern counties of England, places between which several railway systems are necessarily used in completing the route.

Some of the cases referred to have already received investigation at the hands of the North British, and in those cases the North British Company are in a position to prove that the goods were delivered to the next railway company with all promptitude and despatch.

It may be necessary to state that the railway system generally involves this peculiarity that the waggon constructed for railway use is of considerable weight, on an average say four tons, and that between such small places as Selkirk, Galashiels, Hawick, Walkerburn, Innerleithen, Langholm, &c., on the one hand, and places in England such as Manchester, Liverpool, Hanley, Huddersfield, Durham, Bristol, Ironbridge (Wiltshire), Cleckheaton, and Wellington (Salop) on the other hand, it is impossible to raise anything like a load, or what would be remunerative to despatch a truck direct from any given station to any given station, and therefore without goods upon it for any intermediate station.

Railway companies have adopted amongst themselves a rule that no truck shall be run through from a station on one system to a station on another system of railways with less than one ton weight, *i.e.*, that a waggon weighing four tons shall at least carry one ton.

Such a regulation it is hoped will appear to be most reasonable. A train of waggons loaded with a ton each, at the low rates of charges which exist between Scotland and England (bearing in mind that most of the waggons would have to return empty) would certainly not pay; yet the companies do not object to running a truck with such a small tonnage.

The tonnage, however, between any one of the places in England, and any one of the places named in Scotland would seldom amount to, and never exceed, a few hundred weights a day, often only a few hundredweights per week.

For instance, taking the case of Hawick (the most important of the places named in Scotland), the whole tonnage forwarded from the places named in England, (Manchester, Liverpool, Hanley, Huddersfield, Durham, Bristol, Ironbridge (Wiltshire), Cleckheaton, and Wellington (Salop),) to Hawick did not, in the whole, for the month of November 1866, average more than thirteen hundredweight daily, and the tonnage forwarded from Hawick to the said places in England, did not in the whole average more than six and a half hundredweight daily in the same month.

It will be obvious that the railway system therefore involves either that the goods which may properly be called "sundries" should be forwarded from stage to stage with other goods as may be from time to time most convenient, so as to employ the trucks which carry them with at least one ton, and this stage to stage conveyance is necessarily the reason of delays, the waggons having to be shunted from the train, the goods being removed to, and loaded on other waggons which still may be only forwarded another stage at the end of which the same process may have again to be repeated and so on.

With reference to the paragraph in the statement by Messrs. Brown submitted to the Royal Commission that the Shipping Agents at Huddersfield state that "if the "goods are delivered to them in the morning they can "have them shipped at Liverpool that afternoon, from "whence they arrive in New York in 10 or 12 days," it may be remarked that the amount of traffic between any two stations forms the element of the whole question.

Where the traffic between two stations may be counted by a hundredweight or two in a week and the distance 150 or 200 miles the conveyance must necessarily be slow, if goods trains be used; but where the traffic amounts to from four to six truck loads per day and for distances of no more than 50 or 60 miles (as is the case between Huddersfield and Liverpool) a very few hours suffice for effecting the transit.

These explanations are offered as accounting in a general way and to some extent for the delays complained of.

It is not alleged in the statement referred to that goods forwarded in full truck loads are subject to any delays at all to be complained of.

There may have been in some cases of the "sundry goods" avoidable delays with some companies which the North British Company cannot undertake to particularise or explain.

There may have been an exceptional case of delay with the North British Railway Company to prevent a recurrence of which that company has always adopted the best means in its power.

I am, &c.
William Pole, Esq., Thomas K. Rowbotham.
Secretary,
Royal Commission on Railways,
House of Lords,
Westminster, S.W.

APPENDIX EI.

STATEMENT on IRISH RAILWAYS, prepared by the IRISH RAILWAY DIRECTORS' CONFERENCE.—Their present Position, and how (without any Loss to the Treasury), at reduced Interest, they could be materially improved financially and the Public better served.

No. 1.—PRESENT POSITION.—(Figures taken from Parliamentary Return of 1864.)

	Principal. £	Dividend and Interest. £	Total Principal. £	Total Dividend and Interest. £
To Ordinary shares paying dividend at 3¾ per cent.			11,378,773	427,267
„ Preference do. „ „ 4½ per cent.	3,789,041	170,939		
„ Debentures, &c. paying interest „ 4½ per cent.	6,037,101	270,643		
„ *Estimated amount of floating debt* (*say*) 6 do.	2,000,000	120,000		
„ Preference shares not paying dividend	1,126,340			
			12,952,482	561,582
„ Ordinary do. „ „			2,984,751	
Total,.....			£27,316,006	£988,849

	£	£
By annual gross revenue,.....	1,581,606	
Less working expenses (being 47½ per cent.).....	750,530	
„ Nett Revenue, ...		831,076
„ Balance, being amount of annual deficiency on present working		157,773
		£988,849

No. 2.—POSITION to be attained if GOVERNMENT would lend MONEY at 3½ per CENT. to take up all redeemable LOANS and DEBTS, and also all PREFERENCE SHARES.

	£
To amount of interest and dividend paid in 1864 on £12,952,482, debentures, floating debt, and preference shares, as above.....	561,582
	£561,582

	£	£
By interest at 3½ per cent. on	12,952,482	
Less by 30 per cent. discount on redeeming £4,915,381 preference shares, which at present pay only 3½ per cent. dividend.....	1,474,614	
£	11,477,868	@
3½ per cent		401,725
By annual saving, available towards reduction of fares and rates.....		159,857
		£561,582

No. 3.—POSITION of IRISH RAILWAYS if purchased by GOVERNMENT on the BASIS of a 3 per CENT. GOVERNMENT STOCK, and under one MANAGEMENT.

	£
To present annual interest and dividend liabilities, as above (No. 1).....	£988,849
	£988,849

	£	£
The present capital (£27,316,006) could be bought for (say) £22,300,000, as under, viz. :—		
25 years' purchase of nett revenue of £831,076	20,775,900	
Say 7*s.* 6*d.* in the £1 for £4,111,091 ordinary and preference shares not paying dividend	1,541,659	
	22,317,559	
3½ per cent. interest on £22,300,000 (being *a little more* than the rate at which Government could raise the money on 3 per cent. Government stock).....	780,500	
Less by 20 per cent. saving on working expenses (£750,530) by concentration of management	150,106	
		630,394
Annual saving available towards clearing off deficit, as per No. 1 above, and reduction of fares and rates		358,455
		£988,849

SUMMARY OF RESULTS, AS ABOVE.

Annual loss, as per No. 1		£157,773
Saving by Plan No. 2, available towards reduction of fares		£159,857
Do. No. 3	£358,455	
Of which, after meeting loss on No. 1.....	£157,773	
There would be a clear surplus, towards reduction of fares and rates, of.....		£200,682

(Signed) JOSEPH ROBINSON, Corbally House, Limerick.
January 10th, 1867.

Appendix EK.

General List of Railway Acts passed from 1801 to the end of the Session of 1866.

Including those for Tramways and also those for Canals and Docks, owned, leased, or worked by Railway Companies.

The Acts marked with an asterisk * show those passed for new lines. The letter (I.) indicates the Irish Railways.
